I High Performance Liquid Chromatography

I.1 Modern HPLC – Fundamentals and Developments

R. Matissek

1	Introduction	19
2	Basic of HPLC	20
2.1	General Aspects	20
2.2	Retention Time	21
2.3	Capacity Factor	22
2.4	Selectivity	23
2.5	Resolution	23
2.6	Band-Broadening	24
2.6.1	Eddy Diffusion	25
2.6.2	Longitudinal Diffusion	25
2.6.3	Resistance to Mass Transport	25
2.6.4	H/u-Curves / VAN DEEMTER Function	27
2.7	Influence on the Resolution and Efficiency of a Column	30
2.8	Influence of the Particle Size on the Separation	33
3	HPLC-Principles and Techniques	35
3.1	Separation Principles	36
3.1.1	Adsorption Chromatography – Normal-Phase Chromatography (NPC)	37
3.1.2	Reversed-Phase Chromatography (RPC)	39
3.1.3	Ion-Pair Chromatography (IPC; Paired Ion Chromatography, PIC)	41
3.1.4	Ion-Exchange Chromatography (IEC) / Ion Chromatography (IC; High Performance Ion Chromatography, HPIC)	41
3.1.5	Other Separation Principles	42
3.2	Selection of the Separation Mode	45
3.3	Low Dispersion Liquid Chromatography (LDLC)	47
3.3.1	Micro-HPLC	47
3.3.2	High Speed- and Very High Speed-HPLC (VHLS)	50
3.4	Supercritical Fluid Chromatography (SFC)	52
4	Peak Identity / Substance Identity	53
5	Quantification	54
6	Column-Switching and Automation	56
	References	59

I.2 Separation Systems and Instrumentation

H.-P. Nissen and H. W. Kreysel

1	Introduction	63
2	Types of Columns	63
3	Stationary Phases and Separation	63
3.1	Unmodified Silica Gel	63
3.2	Chemically Modified Silica Gel	65
3.2.1	Reversed-Phase Materials	65
3.2.2	Other Chemically Bonded Phases	67
3.3	Ion-Exchangers	67
3.4	Phases for the Size-Exclusion Chromatography	68
3.5	Special Phases	69
3.5.1	Separation of Peptides and Proteins	69
3.5.2	Separation of Carbohydrates	70
3.5.3	Separation of Racemates	71
3.5.4	Other Adsorbents	71
3.6	Guard Columns	71
3.7	Saturator Columns	71
4	Detectors for HPLC	71
4.1	General Notes	71
4.2	UV-VIS Detectors	72
4.3	Refractive Index (RI) Detectors	73
4.4	Fluorescence Detectors	73
4.5	Electro-Chemical Detectors	74
4.6	Other Detectors	75
5	Pumps	75
6	Choice of Stationary Phases	76
7	Selections of the Proper Mobile Phase	77
8	Preparations for the Separation	78
9	Operation Techniques	78
9.1	General Notes	78
9.2	The Gradient Elutions	78
9.3	Column-Switching	79
10	Troubleshooting	79
	References	82

II Analysis of Food Ingredients

II.1 Components in Foods with a High Carbohydrate Content

R. Galensa

1	Introduction	87
2	Carbohydrates	87
2.1	Possibilities of Separation of Carbohydrates without Derivatization	88
2.2	Detection Problems	91
2.3	Post-Column Derivatization	92
2.4	Pre-Column Derivatization / Benzoylation	93
2.5	CA-Search	98
3	Plant Phenolic Compounds	101
3.1	Clean up with Polyamide Columns	101
3.2	Phenolic Acids	102
3.3	Flavonoid Glycosides	102
3.4	Polymethoxylated Flavones	104
3.5	Catechin / Epicatechin	104
4	Diode Array Detector	109
5	FOURIER Transform Infrared Detector	110
6	Enzyme Reactor / Biosensor	112
	References	114

II.2 Components in Foods with a High Protein Content

H.-A. Mehrens and D. Reimerdes

1	Introduction	119
2	Milk and Milk Products	119
2.1	Proteins and Protein Derived Compounds	119
2.1.1	Introduction	119

2.1.2	Separation of Total Milk Proteins	120
2.1.3	Caseins	121
2.1.4	Whey Proteins	121
2.1.5	Peptides Derived from Milk Proteins	123
2.1.6	Amino Acids	124
2.1.7	Total and Available Lysine, Lysinoalanine	124
2.1.8	Biogenic Amines in Milk Products	125
2.2	Milk Carbohydrates	125
2.2.1	Determination of Lactose	126
2.2.2	Determination of Lactulose and Epilactose	129
2.3	Analysis of Milk Lipids	131
2.3.1	Analysis of Triglycerides in Milk Fat	131
2.3.2	Determination of Butyric Acid	133
2.3.3	Determination of Phospholipids	134
2.3.4	Determination of Cholesterol	134
2.4	Determination of Organic Acids	136
2.5	Determination of Acetaldehyde	138
3	Meat and Meat Products	138
3.1	Introduction	138
3.2	Meat Proteins, Peptides	139
3.3	Determination of Hydroxyproline	139
3.4	Determination of 3-Methylhistidine	140
3.5	Determination of Histidine Dipeptides	141
3.6	Determination of Lactic Acid	141
3.7	Determination of Cholesterol	141
3.8	Determination of Nitrates and Nitrites	141
4	Fish	142
4.1	Introduction	142
4.2	Determination of Biogenic Amines	142
4.3	Determination of Indole	143
4.4	Determination of ATP-Degradation Products	143
5	Protein Products from Soya-Beans	144
5.1	Introduction	144
5.2	Determination of Oligosaccharides	145
5.3	Determination of Saponin and Sapogenins	145
5.4	Determination of Isoflavonoid Substances	145
5.5	Determination of Phytic Acid	145
	References	146

II.3 Components in Foods with a High Fat Content

U. Coors

1	Introduction	151
2	Determination of the Lipid Composition	151
2.1	Triacylglycerols	151
2.2	Fatty Acids	152
2.3	Phospholipids	159
2.4	Sterols	159
2.4.1	Semipreparative Methods	159
2.4.2	Analytical Methods	160
2.5	Tocols	161
3	Characteristic Components of Some Oils and Fats	167
3.1	Sesamol, Sesamolin and Sesamin in Sesame Seed Oil	167
3.2	Gossypol in Cottonseed Products	170
3.3	Diacetyl in Butter	170
4	Components of Lipid Oxidation	171
4.1	Degradation Profiles	171
4.2	Cholesterol Oxides	172
	References	178

II.4 Vitamins

C. Mladek

1	Introduction	183
2	Water-Soluble Vitamins	183
2.1	Vitamin C (Ascorbic Acid)	186
2.1.1	Sample Preparation	187
2.1.2	Chromatography	188
2.2	Vitamin B ₁ (Thiamine)	191
2.2.1	Sample Preparation	192
2.2.2	Chromatography	194
2.3	Vitamin B ₂ (Riboflavin)	194
2.3.1	Sample Preparation	194
2.3.2	Chromatography	197
2.4	Vitamin B ₆ (Pyridoxamine, Pyridoxal, Pyridoxine)	197
2.4.1	Sample Preparation	197
2.4.2	Chromatography	198

2.5	Vitamin B ₁₂ (Cyanocobalamin)	198
2.5.1	Sample Preparation	198
2.5.2	Chromatography	199
2.6	Niacin	200
2.6.1	Sample Preparation	201
2.6.2	Chromatography	201
2.7	Folates	202
2.7.1	Sample Preparation	202
2.7.2	Chromatography	203
2.8	Biotin and Pantothenic Acid	203
2.8.1	Sample Preparation	203
2.8.2	Chromatography	206
2.9	Results and Discussion	207
3	Fat-Soluble Vitamins	208
3.1	Vitamin A (Retinoids)	210
3.1.1	Sample Preparation	212
3.1.2	Chromatography	212
3.2	β-Carotene	215
3.2.1	Sample Preparation	215
3.2.2	Chromatography	217
3.3	Vitamin D (Ergocalciferol, Cholecalciferol)	219
3.3.1	Sample Preparation	220
3.3.2	Chromatography	222
3.4	Vitamin E (Tocopherols, Tocotrienols)	223
3.4.1	Sample Preparation	224
3.4.2	Chromatography	224
3.5	Vitamin K (Phyllochinone, Multiprenylmenaquinones, Menadione)	227
3.5.1	Sample Preparation	228
3.5.2	Chromatography	228
4	Results and Discussion	229
	References	230

II.5 Ions and Ionic Components

B. Rössner

1	Introduction	235
2	Analytical Systems	235
2.1	Separation Methods	236
2.1.1	Ion-Exchange with Suppressor	236

2.1.2	Ion-Exchange without Suppressor	238
2.1.3	Ion-Pair Reversed-Phase Chromatography	239
2.1.4	Ion-Exclusion Chromatography	242
2.2	Detection Systems	243
2.2.1	Conductivity Detector	243
2.2.2	Refractive Index Detector	244
2.2.3	UV-VIS Detector	244
2.2.4	Electro-Chemical Detector	244
2.2.5	Post-Chromatographic Reaction Detector	245
3	Application of Ion Chromatography in the Field of Food, Semi-Luxuries, and General Needs Analysis	245
3.1	Drinking and Mineral Waters	245
3.2	Beverages (Wine, Beer, Juices, etc.)	251
3.3	Meat and Meat Products	256
3.4	Milk and Milk Products	257
3.5	Vegetables and Grain Products	260
3.6	Tooth Paste	264
4	Summary and Prospect	264
	References	265

III Analysis of Food Additives

H. Köbler

1	Introduction	271
2	Remarks on Methods Described	272
3	Determination of Preservatives	272
3.1	Sample Preparation	272
3.2	Determination of Propionic Acid	273
3.3	Determination of Sorbic Acid, Benzoic Acid and p-Hydroxybenzoic Acid Methylster	274
3.4	Determination of Natamycin	276
3.5	Multi-Method for Determination of Preservatives	278
4	Determination of Fungicides Used on the Surface of Fruit Peels	282
4.1	Extraction of Fungicides	282
4.2	HPLC-Determination	282
5	Determination of Artificial Sweeteners	285
5.1	Sample Preparation	285

5.2	HPLC-Determination of Saccharin, Aspartame and Dulcin	286
5.3	Determination of Acesulfam-K	286
5.4	Determination of Cyclamate	286
5.5	Determination of Stevioside	289
5.6	Determination of Palatinit, Sorbitol and Mannitol	289
5.7	Multi-Methods for Sweeteners	289
6	Determination of Antioxidants	289
7	Determination of Food Dyes	292
8	Determination of Nitrate and Nitrite	294
	References	295

IV Analysis of Residues and Contaminants

R. Malisch and H. Heusinger

1	Introduction	299
2	Pharmacologically Active Substances	299
2.1	Methods with UV Detection	302
2.2	Methods with Fluorescence Detection	316
2.2.1	Substances with Native Fluorescence	317
2.2.2	Fluorescence Detection After Pre- and Post-Column Derivatization	317
2.3	Column-Switching and On-Line Sample Clean-Up	323
2.4	Electro-Chemical Detection	324
3	Pesticides	325
3.1	Triazines and Phenylurea Herbicides	328
3.2	Carbamates	331
3.3	Organochlorine Pesticides	332
3.4	Glyphosate	332
4	Polycyclic Aromatic Hydrocarbons	332
4.1	General Analytical Aspects	332
4.2	Sample Preparation	333
4.3	Determination by Fluorescence Detection	335
5	Mycotoxins and Saxitoxin	339
5.1	Aflatoxins	339
5.2	Patulin	340
	References	341
	Index	347
