

CONTENTS

Preface	xv
Part 1	
Introduction to the SAS System	1
Chapter 1	
What Is the SAS System?	3
A Comparison of SAS and Other Systems	4
Computers on which the SAS System Can Run	4
SAS Jobs, Programs, and Data Files	5
The SAS job	5
The parts of a SAS program	6
Types of data files	7
Chapter 2	
A SAS Demonstration	11
The Data File	12
The SAS Program	16
The DATA step	16
The PROC steps	18
The Print File	18
The SAS Log	20
Exercises	22
Chapter 3	
The DATA Step and SAS Data Sets	27
Types of Data Files	27
Non-SAS files	28
SAS data sets	28
SAS Names	28
The Structure of a DATA Step	29
The DATA Statement	29
Locating the Non-SAS File	29
The INFILE statement	30
The LINES statement	31
The Null statement	32
Reading Each Record in a Non-SAS File	32
Variable names	32
Numeric and character variables	32
The INPUT statement	33
Putting the DATA Step Together	34
What Happens in a DATA Step?	35
The DATA step	35
The SAS data set	36

Chapter 4	Some SAS Reporting Procedures	41
	The PROC Statement	41
	The PROC Step	41
	PROC PRINT	44
	The VAR statement	44
	The ID statement	44
	The SUM statement	44
	The TITLE statement	46
	PROC CHART	47
	Specifying the type of chart (TYPE= option)	48
	Specifying the intervals	50
	Why the intervals should be specified (or DISCRETE used)	53
	PROC PLOT	54
	Statements for PROC PLOT	55
	Options on the PLOT statement	55
	Examples	56
	Exercises	60
Chapter 5	Some SAS Descriptive Procedures	63
	PROC MEANS	63
	Statements for PROC MEANS	63
	Options on the PROC MEANS statement	64
	PROC UNIVARIATE	65
	Output from PROC UNIVARIATE	66
	Statements for PROC UNIVARIATE	67
	PROC FREQ	67
	Sums and Means in PROC CHART	68
	Statements for PROC CHART for sums and means	69
	Statistics for Groups and Subgroups	71
	Two- and multi-way tables in PROC FREQ	71
	Groups and subgroups in PROC CHART	73
	Exercises	76

Part 2	The DATA Step	77
Chapter 6	The Assignment and Sum Statements	79
	The Assignment Statement	79
	Numeric Expressions	80
	Numeric constants	80
	Numeric variables	81
	Arithmetic operators	81
	Order of operations and parenthesized expressions	81
	Functions	82
	Further examples	84
	Missing Values	85
	The Sum Statement	86
Chapter 7	Character Variables and the Length Statement	89
	The LENGTH statement	89
	Column input	89
	List input	90
	List input and the ampersand modifier	90
	Assignment statement	91
	The Assignment Statement and Character Expressions	91
	Character constants	93
	Character variables	93
	Character operator	93
	Character functions	93
Chapter 8	Conditional Statements	95
	The IF-THEN Statement	95
	Nested IF-THEN statements	96
	Logical Expressions	97
	Comparison operators	97
	Logical operators	97
Chapter 9	Sources of Input	99
	The SET Statement	99
	INPUT Extensions	100
	The ampersand modifier (&)	100
	The column pointer controls (@n, +n)	100
	The line pointer controls (#n, /)	101
	The double trailing at-sign (@@)	101
	INFILE Extensions	102
	The FIRSTOBS= and OBS= options	102
	Detecting End of File	102

Chapter 10	Output from the DATA Step	103
Writing on an External File		103
The FILE statement		103
The PUT statement		103
PUT Extensions		104
The column pointer controls (@n, +n)		104
The line pointer controls (#n, /, _PAGE_, OVERPRINT)		104
Creating More Than One Output Data Set		105
The OUTPUT statement		105
When does output occur?		106
Detecting End of File on Input		106
Restricting the Observations		107
The Subsetting IF statement		107
The DELETE statement		108
The STOP statement		108
Chapter 11	Explicit Looping	111
DO Loops		111
Generating Random Numbers		114
Uniform random numbers		114
Normal random numbers		117
Generating Sampling Distributions		118

Part 3	Formatting and Subgroup Analyses	123
Chapter 12	Formats	125
	What Is a Format?	125
	PROC FORMAT and Value Labels	128
	Parts of the VALUE statement	128
	Examples of VALUE statements	129
	The FORMAT Statement	130
	Formats for Character Variables	135
	Pre-defined Formats	136
	Field width	138
	Number of decimals	138
	No format	139
	Formats in PROC steps	139
	Formats in PUT statements	140
Chapter 13	Sorting	143
	PROC SORT	143
	Statements for PROC SORT	143
	Sorting in descending order	146
Chapter 14	Analysis by Subgroups	149
	Using the BY Statement in PROC Steps	149
	Tables and charts of frequencies	149
	Tables and charts of means	152
	Example of PROC UNIVARIATE	155
Chapter 15	Customized Reports	157
	The FIRST. and LAST.byvariables	157
	Planning the Program	159
	Two Examples	160
	Exercises	163

Part 4	Extending the SAS Model	165
Chapter 16	The SAS Data Set	167
	The Index of a SAS Data Set	167
	The role of the SET statement	168
	The Type of a Variable	169
	Determining type from INPUT or LENGTH statements	169
	Determining type from an assignment statement	169
	The Length of a Variable	169
	Character variables	170
	Numeric variables	170
	Variable Labels	170
	Labels stored in the data set	170
	Labels defined in a PROC step	171
	How procedures use the label	171
	The Format of a Variable	172
	How procedures use the format	172
	Changing the Variables in a Data Set	173
Chapter 17	The DATA Step	175
	The Program Data Vector and the DATA-Step Process	175
	More Complex Data Steps	179
Appendix A	SAS Statements by Chapter	183
Appendix B	Index to SAS Statements	187
Index		189
