

Table of Contents

Introduction	1
Part I Software Development and Prototyping	5
1 What is Prototyping?	6
1.1 Prototyping as an Approach to System Development	6
1.2 The Term "Prototype"	7
1.3 Rapid Prototyping	8
1.4 Summary	9
2 Basic Elements of System Development	10
2.1 Informal Nets as a Means of Representation	10
2.2 Construction and Evaluation	11
2.3 Software Development Concepts	15
2.4 Examples of Software Development Concepts	18
3 Traditional Life Cycle Plans	24
3.1 Life Cycle Models and Life Cycle Plans	24
3.2 Life Cycle Plans in Current Practice	24
3.3 The Origin of Life Cycle Plans	27
3.4 Problems Associated with Traditional Life Cycle Plans	28
3.5 Where Do Life Cycle Plans Work?	31
4 Prototyping	33
4.1 Different Aspects of Prototyping	34
4.1.1 The Prototype in the Software Development Process	34
4.2 Goals of Prototyping	38
4.3 Horizontal and Vertical Prototyping	39
4.4 The Relationship between Prototype and Application System	40
4.5 Examples of Prototyping	41
4.5.1 An Order Processing System	41
4.5.2 An Office System for Planning Departments	43
4.5.3 Software Tools for Graphic Workers	44
4.5.4 Assessment of the Three Examples	46

5 Evolutionary System Development	49
5.1 Evolutionary System Development	49
5.2 Evolutionary System Development in Practice	51
5.2.1 The α - β Test Procedure	52
5.2.2 Versioning	54
5.3 Problems Connected with System Development	56
5.3.1 Other Ways of Tackling the Problem	57
5.3.2 Evolutionary System Development is Necessary	59
5.3.3 Evolutionary System Development is Possible	60
5.3.4 Restoring Instead of Demolishing	65
6 Evolutionary Process Models	67
6.1 Technical Implementation of Software Versions	71
6.1.1 Object-Oriented Design	72
6.1.2 The Client-Supplier Model	73
6.1.3 The Separation of Interaction and Functionality	74
6.1.4 The Model-View-Controller Paradigm	75
6.2 Our Assessment	77
 Part II Technical Support of Prototyping	 79
7 The Tool Landscape	80
7.1 Screen Generators	80
7.2 Database-Oriented Development Systems	81
7.3 Very High Level Languages	83
7.4 Programming Environments	83
7.5 Tools and Prototype Development	84
8 Screen Generators	87
8.1 Screen Generators and Prototyping	87
8.2 Tool Components of Screen Generators	88
8.2.1 Requirements and Characteristics of Screen Generators	88
8.2.2 Tool Components for Building Simple Prototypes	91
8.2.3 Tool Components for Building Complex Prototypes	94
8.2.4 Prototypes and Target Systems	97
8.3 Our Assessment	98
9 Database-Oriented Development Systems	102
9.1 Concept and Features	102
9.1.1 The Conceptual World of Database Systems	102
9.1.2 The Levels of Description in Database Systems	104
9.1.3 The Modelling Concepts of Database Systems	105

9.1.4	Language Constructs of Database Systems	106
9.1.5	Data Integrity in Database Systems	107
9.1.6	Developing Database Applications	108
9.2	Components of Database-Oriented Development Systems	108
9.2.1	Example of a Conceptual Schema	109
9.2.2	Integration of the System Components	110
9.2.3	Components for Constructing Vertical Prototypes	112
9.2.4	Components for Constructing Simple Prototypes	114
9.2.5	Screen Design With Screen Generators	116
9.2.6	Dialog Design With Menu Generators	116
9.2.7	Components for Constructing Complex Prototypes	120
9.2.8	Language Constructs for Flow of Control	121
9.2.9	Language Constructs for Formulating Procedures and Trans- actions	122
9.3	Our Assessment	123
9.3.1	Use and Handling	124
9.3.2	Programming in the Small and in the Large	125
9.3.3	Suitability for Further Use and Target Systems	126
9.3.4	Development Strategies and Approaches	128
9.3.5	Outlook	130
10	Very High Level Languages	131
10.1	Concept and Features	131
10.2	Benefits and Limitations	132
10.3	The Main Groups	134
10.3.1	Logical Languages	134
10.3.2	Functional Languages	135
10.3.3	Algebraic Languages	136
10.3.4	Miscellaneous Languages	136
10.4	Are Object-Oriented Languages VHLLs?	137
10.5	Application Areas	138
10.5.1	Extended Compilation	140
10.5.2	Metaprogramming	140
10.5.3	Program Synthesis	141
10.5.4	Derivation	141
10.5.5	Summary	142
10.6	Selecting a Very High Level Language	142
11	Programming Environments	144
11.1	Prototyping and Programming Environments	144
11.2	Languages in a Programming Environment	147
11.3	The Requirements For These Languages	148
11.4	Building Prototypes	151
11.5	An Example of a Programming Environment	152

11.6 Tools in a Programming Environment	153
11.7 Our Assessment	158
12 Prototyping in Practice	160
12.1 Prototyping and Conventional Development Models	161
12.1.1 Specification of Requirements	161
12.1.2 Requirements Analysis and Project Acquisition	162
12.1.3 Our Assessment	162
12.2 Prototyping and "Surface-Down" Development	163
12.2.1 Our Assessment	164
12.3 Prototyping and Evolutionary Strategies	166
12.3.1 Our Assessment	167
12.4 Prototyping and User Development	168
12.4.1 Our Assessment	169
12.5 Prototyping and Documentation	170
12.5.1 Our Assessment	171
13 The Groups Involved in Prototyping	173
13.1 The Developers	173
13.1.1 Opposition from the Developers	174
13.1.2 New Forms of Project Work	174
13.1.3 New Technical Environment	175
13.1.4 The Users	176
13.2 Management	178
13.2.1 The Break with Conventional Methods	178
13.2.2 New Forms of Project Organization	179
13.2.3 New Technical Infrastructure	179
13.2.4 New Contracts	180
13.2.5 New Forms of Personnel Management	181
14 Summary	183
References	192
Index	202
