0.1	Introduction	xi
0.2	Notation	xvi
1	Integral Representations for Fields	1
1.1	Preamble	1
1.2	Dyadic Calculus	4
1.3	The Free-space Dyadic Green's Function in R^3	11
1.4	The Franz Representation for an Interior Problem in R^3	17
1.5	The Franz Representations for Scattered Fields in R^3	21
1.6	The Stratton-Chu Representation in R^3	28
1.7	The Helmholtz Representation for Acoustic Fields	32
1.8	Volume Scattering: The Born Approximation	36
1.9	Rellich's Uniqueness Theorem	40
2	Polarization	46
2.1	Preliminary	47
2.2	Representation of Polarization	48
2.2.1	Classical Method	51
2.2.2	Alternative Method	53
2.2.3	Relationship between $(\mathbf{E}_\xi, \mathbf{E}_\eta)$ and $(\mathbf{E}_x, \mathbf{E}_y)$	59
2.3	Stokes Vector for a Monochromatic Electric Field	61
2.4	Change of Polarization Basis	71
2.5	Superposition of Circularly Polarized Waves	74
2.6	Coherency Matrix for Quasi-Monochromatic Waves	77
2.6.1	Spinors, Trace	78
2.6.2	Coherency Matrix	80
2.6.3	Relationship between the Coherency Matrix and the Stokes Vector	82
2.7	Degree of Polarization	83
2.8	Decomposition of Partially Polarized Waves	85
3	Scattering Matrix	93
3.1	Scattering and Polarization Geometries	94
3.2	Equivalent Induced Surface Current Densities	98

3.3	Scattering- and Reflection-Coefficient Matrices	104
3.4	The Reciprocity Relation for $\overline{\mathbf{S}}(k\Omega_2 k\Omega_1)$	115
3.5	Backscatter from Large Smooth and Convex Scatterers	118
3.6	The Method of Stationary Phase	125
4	Optimal Polarizations	132
4.1	A Short Historical Sketch	133
4.2	Scattering Geometry and the S-matrix in Backscatter	134
4.3	Optimal Polarizations in Backscatter	136
4.4	Polarizations for Co-Pol Nulls	143
4.5	Polarizations for Cross-Pol Nulls	146
4.6	Optimal Polarization in Bistatic Scattering	152
4.6.1	Bistatic and Reciprocal Scattering Geometries	153
4.6.2	Bistatic Case	155
4.7	A Compact Representation in V_4	161
5	Scattering from Moderately Rough Surfaces	166
5.1	Problem Formulation	166
5.2	Gaussian Statistics	169
5.3	$\Gamma_{mn}(\tau_x, \tau_y)$ in Terms of the Correlation Function	175
5.4	Radar Cross Section in Bistatic Scattering	178
6	Scattering from a Stratified Medium	183
6.1	Scattering Geometry	184
6.2	Free-space Dyadic Green's Function	185
6.3	Dyadic Green's Functions	191
6.4	Backscattered Field	198
7	Review of Potential Theory	200
7.1	Preliminary	200
7.2	Single-layer Potential	201
7.3	Double-layer Potential	202
7.3.1	Direct Value	203
7.3.2	Boundary Values	206
7.4	Conjugate Double-layer Potential	211
7.5	Normal Derivative of a Double-layer Potential	212
7.6	Tangential Derivatives	213

8 Fredholm Alternative	216
8.1 Algebraic Alternative	216
8.2 Fredholm Alternative	217
8.3 Examples	223
9 Integral Equation Method	229
9.1 Preamble	229
9.2 Basic Concepts	230
9.3 Exterior Dirichlet Problem	234
9.3.1 Double-layer Potential Representation	234
9.3.2 Single-layer Potential Representation	241
9.3.3 Related Interior Eigenvalues	244
9.3.4 The PBW Representation	246
9.4 Exterior Neumann Problem in R^2	249
9.4.1 Single-layer Potential Representation	250
9.4.2 The Kussmaul Representation	251
9.5 Electromagnetic Scattering in R^2	256
9.5.1 Case of E-Polarization	258
9.5.2 Case of H-Polarization	266
9.6 Summary	270
9.7 Linear Combination Technique	271
9.8 Electromagnetic Scattering in R^3	273
9.9 Simple Numerical Examples	287
10 Exterior Resonant Frequencies	296
10.1 Basic Concept	297
10.2 Adaptation of the Gurjuoy-Saxon Approach	301
10.3 Exterior Resonant Frequencies of a Sphere and a Cylinder . .	303
10.3.1 Sphere	304
10.3.2 Cylinder	307
10.4 Via the Integral Equation Method	310
10.5 Scattering Operator in Electromagnetic Scattering	314
10.5.1 Reciprocity Relation	316
10.5.2 Scattering Operator in Bistatic Scattering	320
10.6 Dyadic Absorption Operator	322
10.7 Forward Scattering Theorem	327
A Diagonalization of an S-matrix	331
B A Deficient System of Equations	337

C Reflection-coefficient Matrix	346
D Statistical Averages	359
D.1 One-dimensional Case	360
D.2 Two-dimensional Case	362
D.3 Three-dimensional Case	366
E The Cauchy Integral and Potential Functions	373
F Decomposition of a Plane Wave	378
Index	380
