## Part I Principles of Bioreactor Modelling

<b>Nomenclature for Part I</b>	3
<b>1 Modelling Principles</b>	9
1.1 Fundamentals of Modelling	9
1.1.1 Use of Models for Understanding, Design, and Optimization of Bioreactors	9
1.1.2 General Aspects of the Modelling Approach	10
1.1.3 General Modelling Procedure	12
1.1.4 Simulation Tools	14
1.1.5 ISIM	15
1.1.6 Teaching Applications	16
1.2 Development and Meaning of Dynamic Differential Balances	16
1.3 Formulation of Balance Equations	21
1.3.1 Types of Mass Balance Equations	21
1.3.2 Balancing Procedure	24
1.3.2.1 Case A. Continuous Stirred Tank Bioreactor	24
1.3.2.2 Case B. Tubular Reactor	25
1.3.2.3 Case C. River with Eddy Current	25
1.3.3 Total Mass Balances	34
1.3.4 Component Balances for Reacting Systems	35
1.3.4.1 Case A. Constant Volume Continuous Stirred Tank Reactor	35
1.3.4.2 Case B. Semi-Continuous Reactor with Volume Change	37
1.3.4.3 Case C. Steady-State Oxygen Balancing in Fermentation	38
1.3.4.4 Case D. Inert Gas Balance to Calculate Flow Rates	39
1.3.5 Stoichiometry, Elemental Balancing and the Yield Coefficient Concept	40
1.3.5.1 Simple Stoichiometry	40
1.3.5.2 Elemental Balancing	42
1.3.5.3 Mass Yield Coefficients	42
1.3.5.4 Energy Yield Coefficients	43
1.3.6 Energy Balancing for Bioreactors	45

1.3.6.1	Case A. Determining Heat Transfer Area or Cooling Water Temperature . . . . .	48
1.3.7	Calculating pH with an Ion Charge Balance . . . . .	49
<b>2</b>	<b>Basic Bioreactor Concepts . . . . .</b>	<b>51</b>
2.1	Information for Bioreactor Modelling . . . . .	51
2.2	Bioreactor Operation . . . . .	52
2.2.1	Batch Operation . . . . .	52
2.2.2	Semi-Continuous or Fed Batch Operation . . . . .	54
2.2.3	Continuous Operation . . . . .	56
2.2.4	Summary and Comparison . . . . .	59
<b>3</b>	<b>Biological Kinetics . . . . .</b>	<b>63</b>
3.1	Enzyme Kinetics . . . . .	64
3.1.1	Michaelis-Menten Equation . . . . .	64
3.1.2	Other Enzyme Kinetic Models . . . . .	68
3.1.3	Deactivation . . . . .	70
3.1.4	Sterilization . . . . .	71
3.2	Simple Microbial Kinetics . . . . .	72
3.2.1	Basic Growth Kinetics . . . . .	72
3.2.2	Substrate Inhibition of Growth . . . . .	74
3.2.3	Product Inhibition . . . . .	76
3.2.4	Other Expressions for Specific Growth Rate . . . . .	76
3.2.5	Substrate Uptake Kinetics . . . . .	78
3.2.6	Product Formation . . . . .	80
3.2.7	Interacting Microorganisms . . . . .	80
3.2.7.1	Case A. Modelling of Mutualism Kinetics . . . . .	82
3.2.7.2	Case B. Kinetics of Anaerobic Degradation . . . . .	84
3.3	Structured Kinetic Models . . . . .	86
3.3.1	Case C. Modelling Growth and Synthesis of Poly- $\beta$ -hydroxybutyric Acid (PHB) . . . . .	89
3.3.2	Case D. Modelling of Sustained Oscillations in Continuous Baker's Yeast Culture . . . . .	90
3.3.3	Case E. Growth and Product Formation of an Oxygen-Sensitive <i>Bacillus subtilis</i> Culture . . . . .	93
<b>4</b>	<b>Bioreactor Modelling . . . . .</b>	<b>97</b>
4.1	General Balances For Tank-Type Biological Reactors . . . . .	97
4.1.1	The Batch Fermenter . . . . .	99
4.1.2	The Chemostat . . . . .	100
4.1.3	The Fed Batch Fermenter . . . . .	102
4.1.4	Biomass Productivity . . . . .	105
4.1.5	Case A. Continuous Fermentation with Biomass Recycle . . . . .	106
4.1.6	Case B. Enzymatic Tanks-in-Series Bioreactor System . . . . .	108
4.2	Modelling Tubular Plug Flow Bioreactors . . . . .	109

4.2.1	Steady-State Balancing . . . . .	109
4.2.2	Unsteady-State Balancing for Tubular Bioreactors . . . . .	111
<b>5</b>	<b>Mass Transfer . . . . .</b>	<b>113</b>
5.1	Mass Transfer in Biological Reactors . . . . .	113
5.1.1	Gas Absorption with Bioreaction in Liquid Phase . . . . .	113
5.1.2	Liquid-Liquid Extraction with Bioreaction in One Phase . . . . .	114
5.1.3	Surface Biocatalysis . . . . .	114
5.1.4	Diffusion and Reaction in Porous Biocatalyst . . . . .	115
5.2	Interphase Gas-Liquid Mass Transfer . . . . .	115
5.3	General Oxygen Balances for Gas-Liquid Transfer . . . . .	119
5.3.1	Application of Oxygen Balances . . . . .	120
5.3.1.1	Case A. Steady-State Gas Balance to Determine the Biological Uptake Rate . . . . .	120
5.3.1.2	Case B. Determination of $K_L a$ Using the Sulfite Oxidation Reaction . . . . .	121
5.3.1.3	Case C. Determination of $K_L a$ by a Dynamic Method . . . . .	121
5.3.1.4	Case D. Determination of Oxygen Uptake Rates by a Dynamic Method . . . . .	123
5.3.1.5	Case E. Steady-State Liquid Balancing to Determine Oxygen Uptake Rate . . . . .	124
5.3.1.6	Case F. Steady-State Deoxygenated Feed Method for $K_L a$ . . . . .	124
5.3.1.7	Case G. Biological Oxidation in an Aerated Tank . . . . .	125
5.3.1.8	Case H. Modelling Nitrification in a Fluidized-Bed Biofilm Reactor . . . . .	127
5.4	Models for Oxygen Transfer in Large Scale Bioreactors . . . . .	130
5.4.1	Case A. Model for Oxygen Gradients in a Bubble Column Bioreactor . . . . .	132
5.4.2	Case B. Model for a Multiple Impeller Fermenter . . . . .	133
<b>6</b>	<b>Diffusion and Biological Reaction in Immobilized Biocatalyst Systems . . . . .</b>	<b>137</b>
6.1	External Mass Transfer . . . . .	138
6.2	Internal Diffusion and Reaction within Biocatalysts . . . . .	141
6.2.1	Derivation of Finite Difference Model for Diffusion-Reaction Systems . . . . .	143
6.2.2	Dimensionless Parameters from Diffusion-Reaction Models . . . . .	146
6.2.3	The Effectiveness Factor Concept . . . . .	147
6.2.4	Case Studies for Diffusion with Biological Reaction . . . . .	148
6.2.4.1	Case A. Estimation of Oxygen Diffusion Effects in a Biofilm . . . . .	148
6.2.4.2	Case B. Complex Diffusion-Reaction Processes (Biofilm Nitrification) . . . . .	149

<b>7</b>	<b>Automatic Bioprocess Control Fundamentals</b>	153
7.1	Elements of Feedback Control	153
7.2	Types of Controller Action	155
7.2.1	On-Off Control	155
7.2.2	Proportional (P) Controller	156
7.2.3	Proportional-Integral (PI) Controller	156
7.2.4	Proportional-Derivative (PD) Controller	158
7.2.5	Proportional-Integral-Derivative (PID) Controller	159
7.3	Controller Tuning	160
7.3.1	Trial and Error Method	160
7.3.2	Ziegler-Nichols Method	161
7.3.3	Cohen-Coon Controller Settings	161
7.3.4	Ultimate Gain Method	163
7.4	Advanced Control Strategies	163
7.4.1	Cascade Control	163
7.4.2	Feed forward Control	164
7.4.3	Adaptive Control	165
7.4.4	Sampled Data Control Systems	165
7.5	Concepts for Bioprocess Control	166
7.5.1	Selection of a Control Strategy	167
7.5.2	Methods of Designing and Testing the Strategy	169

## **Part II Dynamic Bioprocess Simulation Examples and the ISIM Simulation Language**

<b>8</b>	<b>Simulation Examples of Biological Reaction Processes Using ISIM</b>	181
8.1	Introductory Examples	181
8.1.1	Batch Fermentation (BATFERM)	181
8.1.2	Chemostat Fermentation (CHEMO)	187
8.1.3	Fed Batch Fermentation (FEDBAT)	191
8.2	Batch Reactors	195
8.2.1	Kinetics of Enzyme Action (MMKINET)	195
8.2.2	Lineweaver-Burk Plot (LINEWEAV)	198
8.2.3	Oligosaccharide Production in Enzymatic Lactose Hydrolysis (OLIGO)	201
8.2.4	Structured Model for PHB Production (PHB)	204
8.3	Fed Batch Reactors	208
8.3.1	Variable Volume Fermentation (VARVOL and VARVOLD)	208

8.3.2	Penicillin Fermentation Using Elemental Balancing (PENFERM)	215
8.3.3	Ethanol Fed Batch Diauxic Fermentation (ETHFERM)	226
8.3.4	Repeated Fed Batch Culture (REPFED)	232
8.3.5	Repeated Medium Replacement Culture (REPLCUL)	235
8.4	Continuous Reactors	240
8.4.1	Steady-State Chemostat (CHEMOSTA)	240
8.4.2	Continuous Culture with Inhibitory Substrate (CONINHIB)	243
8.4.3	Nitrification in Activated Sludge Process (ACTNITR)	248
8.4.4	Tubular Enzyme Reactor (ENZTUBE)	253
8.4.5	Dual Substrate Limitation (DUAL)	257
8.4.6	Dichloromethane in a Biofilm Fluidized Sand Bed (DCMDEG)	263
8.4.7	Two-Stage Chemostat with Additional Stream (TWOSTAGE)	269
8.4.8	Two Stage Culture with Product Inhibition (STAGED)	273
8.4.9	Cell Retention Membrane Reactor (MEMINH)	278
8.4.10	Fluidized Bed Recycle Reactor (FBR)	282
8.4.11	Continuous Enzymatic Reactor (ENZCON)	287
8.4.12	Reactor Cascade with Deactivating Enzyme (DEACTENZ)	290
8.5	Oxygen Uptake Systems	296
8.5.1	Aeration of a Tank Reactor for Enzymatic Oxidation (OXENZ)	296
8.5.2	Gas and Liquid Oxygen Dynamics in a Continuous Fermenter (INHIB)	300
8.5.3	Batch Nitrification with Oxygen Transfer (NITRIF)	306
8.5.4	Oxygen Uptake and Aeration Dynamics (OXDYN)	309
8.5.5	Dynamic Method of $K_{La}$ (KLADYN)	313
8.6	Controlled Reactors	318
8.6.1	Feedback Control of a Water Heater (TEMPCONT)	318
8.6.2	Temperature Control of Fermentation (FERMTEMP)	322
8.6.3	Turbidostat Response (TURBCON)	327
8.6.4	Feed Rate Control of Inhibitory Substrate in a Continuous Culture (CONTCON)	331
8.7	Diffusion Systems	334
8.7.1	Double Substrate Biofilm Reaction (BIOFILM)	334
8.7.2	Steady-State Split Boundary Solution (ENZSPLIT)	340
8.7.3	Dynamic Porous Diffusion and Reaction (ENZDYN)	346
8.7.4	Oxygen Diffusion in Animal Cells (CELLDIFF)	351
8.8	Multi-Organism Systems	356
8.8.1	Two Bacteria with Opposite Substrate Preferences (COMMENSA)	356
8.8.2	Competitive Assimilation and Commensalism (COMPASM)	363
8.8.3	Stability of Recombinant Microorganisms (PLASMID)	369
8.8.4	Predator-Prey Population Dynamics (MIXPOP)	374
8.8.5	Competition Between Organisms (TWOONE)	379

8.8.6	Model for Anaerobic Reactor Activity Measurement (ANAEMEAS) . . . . .	383
8.8.7	Oscillations in Continuous Yeast Culture (YEASTOSC) . . . . .	394
8.8.8	Fermentation with Pervaporation: (SUBTILIS) with ISIM and (CULTURE) with the Advanced Language ESL . . . . .	399
<b>9</b>	<b>Instructions for Using the ISIM Language</b> . . . . .	<b>411</b>
9.1	ISIM Installation Procedure . . . . .	411
9.2	Programing with ISIM . . . . .	413
9.2.1	Getting Started . . . . .	413
9.2.2	Reading Files from Disk . . . . .	413
9.2.3	Running Simulations . . . . .	413
9.2.4	Interacting with ISIM Simulations . . . . .	413
9.2.5	Editing ISIM Files . . . . .	414
9.2.6	Writing ISIM Models . . . . .	416
9.2.7	ISIM Statements and Functions . . . . .	418
9.2.8	Output . . . . .	419
9.2.9	Useful Sequences of Statements . . . . .	421
9.2.10	Further Information . . . . .	421
9.3	Summary of ISIM Commands . . . . .	422
9.3.1	COMMAND and INPUT Modes . . . . .	422
9.3.2	ISIM Commands . . . . .	422
9.3.3	ISIM Program Statements . . . . .	425
9.4	ISIM Error Messages . . . . .	429
