

Table of Contents

Introduction	1
Part I. Genetic Algorithms	11
1 GAs: What Are They?	13
1.1 Optimization of a simple function	18
1.1.1 Representation	19
1.1.2 Initial population	20
1.1.3 Evaluation function	20
1.1.4 Genetic operators	21
1.1.5 Parameters	21
1.1.6 Experimental results	22
1.2 The prisoner's dilemma	22
1.2.1 Representing a strategy	23
1.2.2 Outline of the genetic algorithm	23
1.2.3 Experimental results	24
1.3 Traveling salesman problem	25
1.4 Hill climbing, simulated annealing, and genetic algorithms	26
1.5 Conclusions	30
2 GAs: How Do They Work?	31
3 GAs: Why Do They Work?	43
4 GAs: Selected Topics	55
4.1 Sampling mechanism	56
4.2 Characteristics of the function	62
4.3 Other ideas	67
Part II. Numerical Optimization	73
5 Binary or Float?	75
5.1 The test case	76
5.2 The two implementations	77
5.2.1 The binary implementation	77
5.2.2 The floating point implementation	77
5.3 The experiments	78
5.3.1 Random mutation and crossover	78
5.3.1.1 Binary	78

	5.3.1.2	FP	79
	5.3.1.3	Results	79
5.3.2		Non-uniform mutation	79
	5.3.2.1	FP	80
	5.3.2.2	Binary	80
	5.3.2.3	Results	80
5.3.3		Other operators	80
	5.3.3.1	Binary	81
	5.3.3.2	FP	81
	5.3.3.3	Results	81
5.4		Time performance	81
5.5		Conclusions	82
6		Fine Local Tuning	83
6.1		The test cases	84
	6.1.1	The linear-quadratic problem	85
	6.1.2	The harvest problem	85
	6.1.3	The push-cart problem	86
6.2		The evolution program for numerical optimization	86
	6.2.1	The representation	87
	6.2.2	The specialized operators	87
6.3		Experiments and results	89
6.4		Evolution program versus other methods	90
	6.4.1	The linear-quadratic problem	90
	6.4.2	The harvest problem	91
	6.4.3	The push-cart problem	92
	6.4.4	The significance of non-uniform mutation	94
6.5		Conclusions	94
7		Handling Constraints	97
7.1		An evolution program: the GENOCOP system	99
	7.1.1	The idea	100
	7.1.2	Elimination of equalities	101
	7.1.3	Representation issues	102
	7.1.4	Initialization process	102
	7.1.5	Genetic operators	103
	7.1.6	An example of the GENOCOP approach	106
	7.1.7	Comparison of the GA approaches	108
		7.1.7.1 The problem	108
		7.1.7.2 Penalty functions	112
		7.1.7.3 Repair algorithms	113
		7.1.7.4 The GENOCOP system	114
		7.1.7.5 Comparison	115
7.2		An evolution program: the GAFOC system	119
	7.2.1	GENOCOP and GAFOC	120
	7.2.2	The GAFOC system	121

7.2.2.1	Representation	121
7.2.2.2	Initial population	121
7.2.2.3	Evaluation	124
7.2.2.4	Genetic operators	124
7.2.2.5	Parameters	125
7.2.3	Experiments and results	125
8	Evolution Strategies and Other Methods	127
8.1	Evolution of evolution strategies	128
8.2	Comparison of evolution strategies and genetic algorithms	132
8.3	Other evolution programs	135
	Part III. Evolution Programs	139
9	The Transportation Problem	141
9.1	The Linear transportation problem	141
9.1.1	Classical genetic algorithms	143
9.1.2	Incorporating problem specific knowledge	145
9.1.3	A matrix as a representation structure	148
9.1.4	Conclusions	154
9.2	The Nonlinear transportation problem	155
9.2.1	Representation	155
9.2.2	Initialization	155
9.2.3	Evaluation	156
9.2.4	Operators	156
9.2.5	Parameters	157
9.2.6	Experiments and results	157
9.2.7	Conclusions	161
10	The Traveling Salesman Problem	165
11	Drawing Graphs, Scheduling, and Partitioning	193
11.1	Drawing a directed graph	193
11.1.1	Graph-1	196
11.1.2	Graph-2	197
11.1.3	Experiments and results	200
11.2	Scheduling	203
11.3	The timetable problem	209
11.4	Partitioning objects and graphs	210
12	Machine Learning	215
12.1	The Michigan approach	218
12.2	The Pitt approach	222
12.3	An evolution program: the GIL system	224
12.3.1	Data structures	224
12.3.2	Genetic operators	225

XIV Table of Contents

12.4 Comparison	228
Conclusions	231
