CHAPTER 1

Ultrastructure of Brain Endothelium

M.W. BRIGHTMAN. With 5 Figures	1
A. Endothelium as a Blood-Brain Barrier	1
B. Astroglia as a Blood-Brain Barrier	2
C. Blood-Brain Access	6
I. Vascularization of Grafts to the Brain	6
1. Grafts of Peripheral Tissues	6
2. Similarity Between Ventricle and Anterior Chamber of the Eye	6
3. CNS Versus Peripheral Tissue Grafts	9
II. Immunological Aspects of the Endothelium	9
III. Circumventricular Organs	11
1. Fenestrae	12
2. Pits and Vesicles	12
3. Tubules	13
D. Ontogeny	14
E. Astrocytic Modulation of the Barrier	15
F. Constituents of Barrier Cell Membranes	18
References	19

CHAPTER 2

Methods of Study

Q.R. SMITH	23
A. Introduction	23
B. Morphologic Techniques	24
I. Organic Dye Tracers	24
II. Electron Microscopy	24
III. Quantitative Morphometry	25
C. In Vivo Transport Methods	25
I. Intravenous Administration/Compartmental Analysis	26
II. Brain Perfusion	30

III. Indicator Dilution	32
IV. Brain Uptake Index	33
V. Other Techniques	34
D. New Dimensions	36
I. Evaluation of Barrier Transport and Permeability in Humans ..	36
1. Positron Emission Tomography	36
2. Magnetic Resonance Imaging	37
II. Autoradiography	37
III. Brain Vasculature/Perfused Capillaries	38
IV. Other Barrier Sites	39
1. Choroid Plexus Epithelium	39
2. Blood-Nerve Barrier	40
3. Blood-Retinal Barrier	40
V. In Vivo Microdialysis	41
VI. Single Capillary Studies	41
E. Molecular/Cellular Biology	42
I. Isolated Microvessels/Endothelial Monolayers	42
II. Identification of Barrier Transporters and Enzymes	43
III. Expression of Barrier Characteristics	43
F. Summary and Perspectives	44
References	44

CHAPTER 3

Diffusional and Osmotic Permeability to Water

P.A. FRASER. With 3 Figures	53
A. Introduction	53
B. The Nature of Permeability	54
C. Water Permeability of the Blood-Brain Barrier	55
I. Diffusive Permeability	56
II. Osmotic Permeability	59
D. Conclusion	62
References	63

CHAPTER 4

Blood-Brain Glucose Transfer

A. GJEDDE. With 8 Figures	65
A. Brief History	65
B. Brain Endothelial Glucose Transporter	66
I. Molecular Biology	66
II. Molecular Kinetics	68
III. Structural Requirements of Glucose Transport	69

C. Theory of Blood-Brain Glucose Transfer	70
I. Apparent Permeability and Flux	71
II. Facilitated Diffusion	74
1. Michaelis-Menten Equation	74
2. Michaelis-Menten Constants	75
3. Partition Volume	75
III. Multiple Membranes	76
1. Endothelial Membranes	77
2. Glial and Neuronal Cell Membranes	78
D. Evidence of Blood-Brain Glucose Transfer	79
I. Methods	79
1. Operational Equations	79
2. Experimental Procedures	81
3. The Blood-Brain Barrier In Vitro	83
II. Normal Values in Awake Subjects	85
1. Permeability and Flux in Normoglycemia	85
2. Michaelis-Menten Constants	88
3. Non-Saturable Glucose Transfer	89
4. Metabolism-Flux Ratio and the Lumped Constant	90
III. Acute Changes of Glucose Transport	91
1. Activation and Deactivation	91
2. Carbon Dioxide and Spreading Depression	95
3. Anoxia and Ischaemia	96
IV. Chronic Changes	97
1. Pre- and Postnatal Development	97
2. Dementia	98
3. Hypo- and Hyperglycaemia	98
References	103

CHAPTER 5

Transport of Amino Acids

J.-M. LEFAUCONNIER. With 3 Figures	117
A. Amino Acid Transport Systems in Animal Cells	117
B. Neutral and Cationic Amino Acids	118
I. Influx	118
1. Quantification of Influx	118
2. Summary of the Results Obtained	120
II. Efflux	124
1. Efflux in the Capillaries	124
2. Passive Efflux Via the Arachnoid Villi	127
3. Efflux Via the Choroid Plexus and Arachnoid Membrane	127
III. Net Uptake	128
C. Anionic Amino Acids	129

D. Metabolism in the Endothelial Cells of Some Transported Amino Acids	129
E. Regulation of Blood-Brain Amino Acid Transport	130
I. Availability of Amino Acids: Plasma Amino Acid Concentration	131
II. Proportions and Rate of Transport of the Amino Acids Between Blood and Brain	131
III. Is Amino Acid Transport Modified by Hormones?	132
IV. Can Amino Acid Transport Be Modified by Neurotransmitters?	133
F. Physiological and Pathological Modifications	134
I. Blood-Brain Amino Acid Transport During Development	134
1. Technical Problems	134
2. How Many Blood-Brain Transport Systems Have Been Found in Immature Animals?	135
3. Coexistence of Higher Blood-Brain Transport with a Lower Density of Capillaries	135
4. When Does the Asymmetry of Transport Between the Two Membranes of the Endothelial Cells Appear?	136
II. Effect of Drugs on Blood-Brain Transport of Amino Acids	136
III. Pathological Modifications of Amino Acid Transport	138
1. Hepatic Encephalopathies	138
2. Uraemia	139
3. Diabetes	139
4. Aminoaciduria	140
5. Intoxications	140
6. Depressive States	141
References	142

CHAPTER 6

Peptides and the Blood-Brain Barrier

D.J. BEGLEY. With 1 Figure	151
A. Introduction: Central Actions of Peripherally Administered Peptides	151
B. Uptake of Peptides at the Blood-Brain Interfaces	153
I. Intracarotid Bolus Injection Studies (Brain Uptake Index)	153
II. Intravenous Bolus Injection Studies	158
III. Brain Perfusion Studies	164
IV. Choroid Plexus Perfusion Studies	171
V. Isolated Cerebral Microvessels	174
VI. Cultured Cerebral Endothelial Cells	178
C. Evidence for Transport Into Brain Extracellular Fluid	181
D. The Influence of Peptides on Blood-Brain Barrier Permeability to Specific Solutes	189

E. General Conclusions	194
References	196

CHAPTER 7

The Movement of Vitamins Into the Brain

O.E. PRATT. [†] With 1 Figure	205
A. Routes	205
I. The Trans-Capillary Route	205
II. Other Possible Routes	205
B. Mechanisms	207
I. Passive Diffusion	207
II. Carrier-Mediated Transport	207
III. Binding Proteins	208
IV. Covalently Bound Carriers	208
C. The Individual Vitamins	208
I. Thiamine	208
II. Ascorbic Acid	211
III. Pyridoxine	212
IV. Folates	213
V. Vitamin B ₁₂	213
VI. Nicotinamide, Nicotinic Acid	214
VII. Choline	214
VIII. Nucleosides and Purine Bases	214
IX. Other B-Vitamins	215
X. Lipophilic Vitamins	215
D. Clinical Implications	215
E. Homeostasis	216
F. Conclusions	217
References	218

CHAPTER 8

Electrolyte Transport

G.P. SCHIELKE and A.L. BETZ. With 3 Figures	221
A. Brain Electrolyte Homeostasis	221
I. Stability of the Extracellular Potassium Concentration	221
II. Spatial Buffering of Potassium	222
III. Extracellular Sodium and Chloride Concentrations	222
IV. Pathologic Conditions	223
B. Blood-Brain Barrier Permeability to Electrolytes	224
I. Measurements of Electrolyte Permeability	224
II. Route of Electrolyte Passage Across the BBB	225
1. Passive Permeability Pathways	226

2. Evidence for Active Transport Pathways	228
III. Epithelial Properties of the Brain Capillary Endothelium	229
IV. Mechanisms of Ion Transport Across the BBB	230
1. Luminal Entry Mechanisms	230
2. Abluminal Transport Systems	233
V. Regulation of BBB Permeability to Ions	236
1. Regulation by Electrolytes and Glucose	236
2. Regulation by Nerves	237
3. Regulation by Hormones	237
References	238

CHAPTER 9

Secretion and Bulk Flow of Interstitial Fluid

H.F. CSERR and C.S. PATLAK. With 4 Figures	245
A. Introduction	245
B. Factors Governing Extracellular Fluid Exchanges	
Within the Brain	246
I. Blood-Brain Barrier	246
II. Cerebral ISF and CSF	246
III. Pathways of Flow Between Brain and CSF	247
C. Bulk Flow of ISF	248
I. Methods of Study	248
II. Drainage of ISF from Brain to CSF	249
1. Historical Perspectives	249
2. Recent Studies	250
III. Retrograde Flow of CSF Into Brain	252
IV. Studies Using Horseradish Peroxidase as Tracer	253
D. Secretion of ISF by the Cerebral Endothelium: An Hypothesis	254
E. Outflow of ISF to Blood and Deep Cervical Lymph	255
F. Functions of ISF Flow	256
I. Clearance	256
II. Brain Volume Regulation	256
III. Immune Function	258
References	258

CHAPTER 10

Trace Metal Transport at the Blood-Brain Barrier

M.W.B. BRADBURY. With 4 Figures	263
A. Introduction	263
B. Theoretical and Experimental Approach	264
C. Intravenous Administration in Intact Rat	264

D. Short Vascular Perfusion of the Brain etc.	266
E. Solutions for Brain Perfusion etc.	266
F. Uptake of Various Trace Metals Into Brain After Radiotracer Infusions	268
I. Lead	270
II. Zinc	271
III. Iron	273
IV. Gallium	274
G. Conclusions	275
References	276

CHAPTER 11

Transport of Drugs

P.J. ROBINSON and S.I. RAPOPORT. With 4 Figures	279
A. Introduction	279
B. Protein Binding and Drug Uptake	282
I. Kinetics of Protein Binding	283
II. Measurable Quantities	284
III. Limiting Cases	285
1. Restrictive Elimination	285
2. Instantaneous Equilibration	286
3. Dissociation-Limited Uptake	287
IV. Implications and Examples	288
V. Additional Factors	289
C. Modification of the Blood-Brain Barrier	290
I. Osmotic Blood-Brain Barrier Opening	290
II. Tumor Chemotherapy	294
D. Conclusions	295
References	297

CHAPTER 12

Clinical Assessment of Blood-Brain Barrier Permeability: Magnetic Resonance Imaging

D. BARNES. With 1 Figure	301
A. Introduction	301
B. Multiple Sclerosis	302
C. Tumours	305
D. Cerebrovascular Disease	306
E. Other Cerebral Diseases	307
F. Quantification of BBB Permeability	307
References	309

CHAPTER 13

Clinical Assessment of the Blood-Brain Barrier:**Positron Emission Tomography**

D.J. BROOKS. With 1 Figure	313
A. Introduction	313
B. $^{82}\text{Rb}^+$ Transport	314
C. $^{68}\text{Ga-EDTA}$ Transport	318
D. Glucose Transport	319
E. Albumin Diffusion and Microvascular Haematocrit	320
F. Amino Acid Transport	321
G. Conclusions	322
References	323

CHAPTER 14

Ontogenetic Development of Brain Barrier Mechanisms

N.R. SAUNDERS. With 12 Figures	327
A. Introduction	327
B. Barriers to Dyes and Proteins in the Developing Brain	330
C. Formation of the Fundamental Blood-Brain and Blood-CSF Barriers in the Embryonic and Fetal Brain	332
D. Ultrastructure of Tight Junctions in Embryonic and Fetal Brain	333
E. Cerebral Endothelial Cells In Vitro	335
F. Suitable Preparations for Studies of Barrier Mechanisms in the Developing Brain In Vivo	337
G. Barrier Permeability to Lipid Insoluble Molecules in the Fetal/Neonatal Brain	339
H. CSF-Brain Barrier in the Immature Brain	341
I. CSF Secretion and Pressure	345
J. Electrolytes in CSF in the Developing Brain	348
K. Glucose and Amino Acid Transport in the Developing Brain	351
L. Proteins in CSF in the Fetus and Neonate	353
M. Trace Metals and Brain-Liver Glycoproteins in the Developing Brain	358
N. Drugs and Barriers in the Developing Brain	360
O. Conclusions	361
References	362

CHAPTER 15

Comparative Physiology of the Blood-Brain Barrier

N.J. ABBOTT. With 9 Figures	371
A. Introduction	371
I. History of Blood-Brain Barrier Studies	371
II. Value of Comparative Studies	372
1. Comparisons Between Animal Groups	372
2. Selection of Convenient Experimental Preparation	372
3. Preparations Offering Unique Advantages	373
B. Evolutionary Pressures Leading to Development of a Blood-Brain Barrier	373
I. Why Do We Need a Blood-Brain Barrier?	373
II. Ionic Homeostasis and Neural Function	374
III. Isolation for Chemical Signalling	375
IV. Regulation of the Periaxonal Environment	376
C. Site of the Barrier Layer	378
I. Endothelial Barrier of Vertebrates	378
II. Glial Barriers in Higher Invertebrates	378
III. Transitional Glial/Pericyte Barrier of Cephalopod Molluscs ...	379
IV. Apparently Anomalous Glial Blood-Brain Barrier of Elasmobranch Fish	379
V. Residual Barrier-Forming Properties of Vertebrate Glia and Ependyma	380
VI. Role of Pericytes in Barrier Function	381
D. Inductive Signals in Barrier Formation	381
I. Grafting Studies: Brain Versus Non-Brain	381
II. Implanted Astrocytes	382
III. Induction in Culture	383
1. Differences Between Cultured and In Situ Endothelial Cells	383
2. Effects of Astrocytes on the Endothelium	383
3. Effects of Endothelial Cells on Astrocytes	383
IV. Induction in Development	383
V. Global Hypothesis of Induction	384
E. Comparative Approach in Developmental Studies	384
I. Maturity at Birth	384
II. Blood-Brain Barrier Development and Ion Homeostasis	385
III. Relation of Ontogeny and Phylogeny	385
F. Permeability and Transport Properties of Barrier Layers	387
I. The Vertebrate Endothelial Barrier	387
II. The Vertebrate Choroid Plexus	387
III. The Elasmobranch Glial Barrier	388
IV. The Cephalopod Glial Barrier	389
V. Crustacean and Insect Glial Barriers	389

VI. Comparison of Endothelial and Glial Barriers	389
1. Properties Common to Barrier Layers	389
2. Differences of Endothelial and Glial Barriers	389
G. Relation of Interstitial Fluid and Cerebrospinal Fluid	390
I. Vertebrate Brain	390
II. Cephalopod Brain	391
H. Summary and Conclusions	391
References	391

CHAPTER 16

Immunology of Brain Endothelium and the Blood-Brain Barrier

D.K. MALE. With 4 Figures	397
A. Introduction	397
B. Molecular Permeability	398
I. Antibodies	398
II. Routes of Molecular Movement	399
C. Movement of Antigens out of the CNS	401
D. Antigen Presentation by Brain Endothelial Cells	401
I. MHC Expression and Induction	402
II. Stimulation of T-Cell Proliferation	404
E. Cellular Migration Across Brain Endothelium	405
I. The Role of Lymphocytes	405
II. Control by Brain Endothelium	408
III. Molecules Controlling Cell Migration into Brain	409
F. Summary and Synthesis	412
References	412

CHAPTER 17

The Blood-Brain Barrier In Vitro and in Culture

J.J. LATERRA and G.W. GOLDSTEIN. With 6 Figures	417
A. Introduction	417
B. Isolated Microvessels	418
C. Transport	418
I. Glucose	421
II. Amino Acids	423
III. Potassium	425
D. The Blood-Brain Barrier in Cell Culture	425
E. Microvessel Morphogenesis In Vitro	427
F. Conclusion	432
References	434

CHAPTER 18

Opening of the Barrier in Cerebral Pathology

P.J. LUTHERT. With 2 Figures	439
A. Introduction	439
B. Demonstration of Barrier Breakdown in Pathological States	440
I. Technical Aspects	440
II. Barrier Breakdown in Cerebral Tumours	440
III. Barrier Breakdown in Alzheimer's Disease	441
IV. Barrier Breakdown in Other Pathological States	441
C. An Anatomical Approach to Barrier Opening in Cerebral Pathology	442
I. Luminal Factors	442
1. Loss of Autoregulation	442
2. Circulating Factors	443
II. Reorganisation of Angioarchitecture	443
1. Angioarchitecture of Cerebral Tumours	444
2. Angioarchitecture in Alzheimer's Disease	445
III. The Endothelial Cell	445
1. Ultrastructural Correlates of Barrier Breakdown	445
IV. The Basement Membrane	447
V. Pericytes	448
VI. Astrocytes	448
1. The Role of the Astrocyte in Barrier Maintenance	448
2. Astrocyte Reactions to Cerebral Injury	448
VII. Blood-Brain Barrier Innervation	449
VIII. Immune Aspects	450
IX. Parenchymal Factors	450
D. Consequences of Barrier Opening	451
I. Benefits of Barrier Opening	451
II. Complications of Barrier Opening	451
E. Manipulation of the Pathologically Disturbed Barrier	452
F. Conclusions	452
References	453

CHAPTER 19

Experimental Manipulation of the Blood-Brain and Blood-Retinal Barriers

J. GREENWOOD. With 4 Figures	459
A. Introduction	459
B. Manipulation of the Blood-Brain and Blood-Retinal Barriers	461
I. Disruptive Agents of Non-Pathological Origin	461
1. Hyperosmolar Solutions	461
2. Bile Salts	464

3. Drugs and Anaesthetics	465
4. Enzymes	468
5. Cations and Endothelial Cell Surface Charge	469
II. Disruptive Agents of Pathological Origin	470
1. Arachidonic Acid and the Eicosanoids	470
2. Histamine	472
3. Bradykinin	473
4. 5-Hydroxytryptamine	474
5. Cytokines, Platelet Activating Factor and Complement ...	475
6. Tumour Secreted Vascular Permeability Factor	476
III. Miscellaneous Techniques	477
C. Cellular Mechanisms of Increased Barrier Permeability and Route of Leakage	478
References	479

CHAPTER 20

Drug Entry Into the Brain and Its Pharmacologic Manipulation

N.H. GREIG. With 18 Figures	487
A. Introduction	487
B. The Presence and Function of a Blood-Brain Barrier	488
I. The Structural Barrier	488
II. The Enzymatic Barrier	489
III. Barrier Permeability	491
C. Factors Determining Time-Dependent Brain Drug Levels	493
I. Ionization	493
II. Drug Binding to Plasma Proteins	494
III. Time-Dependent Plasma Concentration	495
IV. Cerebral Blood Flow	498
D. Strategies for Increasing the Brain Concentration of Drugs	499
I. Development of Lipophilic Analogues and Prodrugs	499
II. Carrier-Mediated Transport	510
E. Summary	515
References	516

CHAPTER 21

Therapeutic Opening of the Blood-Brain Barrier in Man

M.K. GUMERLOCK and E.A. NEUWELT. With 2 Figures	525
A. Introduction	525
B. Chemotherapy for Malignant Brain Tumors	527
I. Published Clinical Series	527
II. Malignant Glioma	532

III. Cerebral Lymphoma	534
IV. Metastatic Tumors to the Brain	535
C. Imaging BBB Disruption	535
D. Complications of BBB Disruption/Chemotherapy	536
E. Tumor-Specific Monoclonal Antibody Infusion after BBB Disruption	537
F. Treatment of Fungal Brain Abscess with BBB Disruption/ Chemotherapy	538
G. Conclusion	539
References	540
Subject Index	543
