

# Contents

<b>Preface</b>	<b>vii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Digital Signal Processing . . . . .	2
1.2 Digital Communications . . . . .	4
<b>2 Mathematical Fundamentals</b>	<b>7</b>
2.1 Algebraic Fields . . . . .	7
2.2 Elementary Number Theory . . . . .	11
2.3 Extension Fields . . . . .	15
2.3.1 Fields of Characteristic 2 . . . . .	17
2.3.2 Fields That Mimic the Complex Field . . . . .	19
2.3.3 Fields That Cannot Mimic the Complex Field . . . . .	19
2.3.4 Fields of Rational Functions . . . . .	20
2.3.5 Cyclotomic Extensions of the Rational Field . . . . .	21
2.4 Rings and Groups . . . . .	23
2.5 Algebraic Integers . . . . .	26
<b>3 Sequences and Spectra</b>	<b>29</b>
3.1 Weight and Complexity . . . . .	29
3.1.1 Linear Complexity . . . . .	30
3.1.2 Cyclic Complexity . . . . .	31
3.1.3 Linear and Cyclic Complexity . . . . .	32
3.2 The Fourier Transform . . . . .	33
3.3 Examples of Fourier Transforms . . . . .	35
3.4 Properties of the Fourier Transform . . . . .	37
3.4.1 Cyclic Decimation . . . . .	39
3.4.2 The Cyclic Complexity Property . . . . .	42
3.4.3 Conjugacy Constraints . . . . .	43
3.5 Decimation of Shift Register Sequences . . . . .	45
3.6 A Universal Eigenvector . . . . .	46
3.7 Bounds on the Weight of Sequences . . . . .	50
3.8 The Gleason–Prange Theorem . . . . .	52
<b>4 Cyclic Codes and Related Codes</b>	<b>57</b>
4.1 Theory of Reed–Solomon Codes . . . . .	57
4.2 Reed–Solomon Codes in Infinite Fields . . . . .	60

4.2.1	Reed–Solomon Codes in the Complex Field . . . . .	60
4.2.2	Reed–Solomon Codes in the Extended Rationals . . . . .	61
4.3	Reed–Solomon Codes in Finite Fields . . . . .	62
4.4	Radix-2 Reed–Solomon Codes . . . . .	65
4.5	Conjugacy Constraints and BCH Codes . . . . .	66
5	<b>Fast Algorithms for Convolution</b>	71
5.1	Convolution by Blocks . . . . .	71
5.2	Fast Algorithms for Cyclic Convolution . . . . .	74
5.3	Convolution of Integer Sequences . . . . .	80
5.4	Convolutions Using Residue Number Systems . . . . .	83
5.5	Convolution of Polynomial Sequences . . . . .	84
6	<b>Solving Toeplitz Systems</b>	89
6.1	The Sugiyama Algorithm . . . . .	89
6.2	The Berlekamp–Massey Algorithm . . . . .	92
6.3	Relationships Between Algorithms . . . . .	97
6.4	The Levinson and Durbin Algorithms . . . . .	98
7	<b>Fast Algorithms for the Fourier Transform</b>	105
7.1	The Cooley–Tukey FFT . . . . .	105
7.2	Radix-2 Transforms . . . . .	106
7.3	The Good–Thomas FFT . . . . .	109
7.4	FFT Algorithms for Subblocks . . . . .	111
7.5	FFT Algorithms Using Algebraic Integers . . . . .	114
7.6	The Winograd FFT . . . . .	115
8	<b>Decoding of Cyclic Codes</b>	119
8.1	Decoding of Reed–Solomon Codes . . . . .	119
8.1.1	The Forney Algorithm . . . . .	121
8.1.2	The Berlekamp Algorithm . . . . .	122
8.2	Erasures and Errors Decoding . . . . .	125
8.3	Time Domain Decoder Algorithms . . . . .	127
8.3.1	A Time Domain Decoder with $n^2$ Steps . . . . .	128
8.3.2	A Time Domain Decoder with $2tn$ Steps . . . . .	129
8.3.3	A Time Domain Decoder with (More Than) $4t^2$ Steps	131
8.4	A Universal Decoder Architecture . . . . .	132
	<b>References</b>	135
	<b>Index</b>	139
