

## ***Table of Contents***

Preface to the Second Edition	xi
Preface to the First Edition	xiii
<b>Chapter One – Surfactant Science and Technology: An Overview</b>	
Introduction	1
A Brief History of Surfactant Science and Technology	3
Surfaces, Interfaces, and Surfactant Structures	6
The Nature of Interfaces	7
Molecules at Interfaces	10
The Surfactant “Personality”	11
Surfactant Building Blocks	13
The Economic Role of Surfactants	14
Modern Surfactant Consumption	15
The Economic and Technological Future	19
Surfactants in the Environment	20
A Surfactant Glossary	22
The Shape of Things To Come	26
<b>Chapter Two – The Organic Chemistry of Surfactants</b>	
Introduction	27
The Many Faces of Dodecane	27
The Classification of Surfactants	31
Surfactant Solubilizing Groups	32
Common Surfactant Hydrophobic Groups	34
The Natural Fatty Acids	34
Paraffins	35
Olefins	36
Alkylbenzenes	37
Alcohols	38
Alkylphenols	39
Polyoxypropylenes	39
Fluorocarbons	39
Silicone Surfactants	41
Anionic Surfactants	41
Sulfate Esters	43
Fatty Alcohol Sulfates	44
Sulfated Fatty Acid Condensation Products	45

Sulfated Ethers	46
Sulfated Fats and Oils	47
Sulfonic Acid Salts	48
Aliphatic Sulfonates	48
Alkylaryl Sulfonates	50
$\alpha$ -Sulfocarboxylic Acids and Their Derivatives	53
Miscellaneous Sulfo Ester and Amide Surfactants	54
Alkyl Glyceryl Ether Sulfonates	57
Carboxylate Soaps and Detergents	58
Ligninsulfonates	59
Phosphoric Acid Esters and Related Surfactants	59
Cationic Surfactants	61
Textiles and Cleaning Applications	64
Antibacterial Applications	64
Corrosion Protection	65
Ore Flotation	65
Asphalt Emulsions	66
Miscellaneous Applications	66
Nonionic Surfactants	66
Polyoxyethylene-Based Surfactants	67
Derivatives of Polyglycerols and Other Polyols	68
Block Copolymer Nonionic Surfactants	70
Miscellaneous Nonionic Surfactants	72
Amphoteric Surfactants	73
Imidazoline Derivatives	74
Surface Active Betaines and Sulfobetaines	76
Phosphatides and Related Amphoteric Surfactants	77

### **Chapter Three – Surfactants In Solution: Micellization and Related Association Phenomena**

Introduction	81
Surfactant Solubility	82
The Phase Spectrum of Surfactants In Solution	84
The History and Development of Micellar Theory	89
Manifestations of Micelle Formation	91
Thermodynamics of Dilute Surfactant Solutions	94
Classical Theories of Micelle Formation	95
Free Energy of Micellization	97
Molecular Geometry and the Formation of Association Colloids	99
Experimental Observations of Micellar Systems	102
Micellar Aggregation Numbers	103
The Critical Micelle Concentration	104
The Hydrophobic Group	105
The Hydrophilic Group	114
Counterion Effects on Micellization	117

The Effect of Additives on The Micellization Process	118
Electrolyte Effects on Micelle Formation	119
The Effect of pH	120
The Effects of Added Organic Materials	121
The Effect of Temperature on Micellization	124
Micelle Formation in Mixed Surfactant Systems	125
Micelle Formation in Nonaqueous Media	127

#### **Chapter Four – Solubilization, Microemulsions, and Micellar Catalysis**

Introduction	133
Solubilization In Surfactant Micelles	134
The “Geography” of Solubilization in Micelles	136
Surfactant Structure and the Solubilization Process	138
Solubilization and the Nature of the Additive	142
The Effect of Temperature on Solubilization Phenomena	144
The Effects of Nonelectrolyte Cosolutes	146
The Effects of Added Electrolyte	147
Miscellaneous Factors Affecting Solubilization	148
Microemulsions	149
Surfactants, Cosurfactants, and Microemulsion Formation	153
Micellar Catalysis	155
Micellar Catalysis in Aqueous Solvent	155
Micellar Catalysis in Nonaqueous Solvents	157

#### **Chapter Five – Liquid Crystals, Vesicles and Lipid Membranes**

Introduction	159
Liquid Crystals	159
Liquid Crystalline Phases in Simple Binary Systems	160
Temperature and Additive Effects on Phase Behavior	163
Vesicles and Bilayer Membranes	165
Vesicles	167
Biological Membranes	168
Membrane Surfactants or Lipids	169
Polymerized Vesicles and Bilayers	170

#### **Chapter Six – Surfactant-Polymer Interactions**

Introduction	173
Surfactant-Polymer Complex Formation	174
Nonionic Polymers	176
Ionic Polymers and Proteins	177
Polymers, Surfactants; and Solubilization	181
Our Daily Bread	183

## **Chapter Seven – Surface Activity and the Liquid/Vapor Interface**

Introduction	185
Interfaces and the Adsorption Phenomenon	185
A Thermodynamic Picture of Adsorption	186
The Effect of Surface Curvature	191
The Surface Tension of Solutions	193
Surfactants and the Reduction of Surface Tension	195
Efficiency, Effectiveness, and Surfactant Structure	197

## **Chapter Eight – Emulsions**

Introduction	209
The Liquid/Liquid Interface	210
General Considerations of Emulsion Stability	212
The Lifetimes of Typical Emulsions	215
Theories of Emulsion Stability	217
Emulsion Type and the Nature of the Surfactant	219
Surface Activity and Emulsion Stability	221
Mixed Surfactant Systems and Interfacial Complexes	226
Liquid Crystals and Emulsion Stability	228
Surfactant Structure and Emulsion Performance	231
The Hydrophile-Lipophile Balance (HLB)	232
The Effects of Additives on HLB	237
Phase Inversion Temperature (PIT)	238
Application of HLB and PIT in Emulsion Formulation	239
Multiple Emulsions	241
Nomenclature for Multiple Emulsions	242
Preparation and Stability of Multiple Emulsions	243
Primary Emulsion Breakdown	243
The Surfactants and Phase Components	245

## **Chapter Nine – Foams**

Introduction	249
The Physical Basis for Foam Formation	250
The Physical Role of the Surfactant in Foams	254
Foam Formation and Surfactant Structure	257
Liquid Crystals and Foam Stability	259
The Effects of Additives on Surfactant Foaming Properties	260
Foam Inhibition	262
Chemical Structures of Antifoaming Agents	263
A Summary of the Foaming and Antifoaming Activity of Additives	264

**Chapter Ten – Surfactants at the Solid/Liquid Interface**

Introduction	267
The Nature of Solid Surfaces	268
Liquid versus Solid Surfaces	270
Adsorption at the Solid/Liquid Interface	272
Adsorption Isotherms	273
Mechanisms of Surfactant Adsorption	275
The Electrical Double Layer	279
The Mechanics of Surfactant Adsorption	280
Adsorption and the Nature of the Adsorbent Surface	281
Nonpolar, Hydrophobic Surfaces	282
Polar, Uncharged Surfaces	282
Surfaces Having Discrete Electrical Charges	283
Surfactant Structure and Adsorption from Solution	285
Surfaces Possessing Strong Charge Sites	286
Adsorption by Uncharged, Polar Surfaces	289
Surfactants at Nonpolar, Hydrophobic Surfaces	290
The Effect of Surfactant Adsorption on the Character of the Solid Surface	290
Wetting and Related Phenomena	292
Surfactant Manipulation of the Wetting Process	295
Some Practical Aspects of Wetting Control by Surfactants	298
Detergency and Soil Removal	298
The Cleaning Process	299
Soil Types	299
Solid Soil Removal	300
Liquid Soil Removal	301
Redeposition	303
Correlations of Surfactant Structure and Detergency	304
Nonaqueous Cleaning Solutions	306
Enhanced Oil Recovery	307
Suspension of Solids in Liquids	309
A Final Comment	310
Bibliography	313
References	317
Index	329
