Preface XI

1	The S_NAr Reactions: Mechanistic Aspects	1
1.1	Introduction	1
1.2	Activation of the Aromatic System: Driving Force for S _N Ar Reactions	5
1.2.1	Benzene and Related Arene Derivatives	5
1.2.2	Pyridine and Related Aza-aromatics	11
1.2.3	Five-Membered Ring Heterocycles	15
1.2.4	Activation by Electron-Withdrawing Heterocyclic Units: The Superelectrophilic Dimension in S _N Ar Substitutions	18
1.3	Leaving Group, Nucleophile, Solvent, and Medium Effects	24
1.3.1	The Influence of the Leaving Group	24
1.3.1.1	Halogen Nucleofugality	24
1.3.1.2	The Mobility of the Nitro Group and Other Leaving Groups	28
1.3.2	The Influence of the Nucleophile	31
1.3.2.1	Basicity and Polarizability	31
1.3.2.2	Ritchie and Mayr's Scales	36
1.3.3	The Influence of the Solvent	38
1.3.3.1	S _N Ar Reactions Involving Anionic Nucleophiles	38
1.3.3.2	S _N Ar Reactions Involving Neutral Nucleophiles	42
1.4	Effects of Specific Structural Variations in the Activated Ring	46
1.4.1	<i>ortho</i> versus <i>para</i> Activation: Hydrogen Bonding and Built-in Solvation	46
1.4.2	Reactivity at Unsubstituted versus Substituted Ring Carbon Atoms: Side Processes	50
1.5	Spectral Evidence for the Intermediacy of σ -Complexes in S _N Ar Reactions	52
1.6	Base Catalysis in S _N Ar Reactions	57
1.6.1	The Specific Base–General Acid Mechanism	61
1.6.2	The Rate-Limiting Proton-Transfer Mechanism	65
1.7	Regioselectivity in S _N Ar Reactions	68

1.8	Asymmetric S_NAr Substitutions	73
1.9	Concerted S_NAr Substitutions	76
1.9.1	Ring Activation and Feasibility of Concerted Substitutions	76
1.9.2	Concerted Substitutions in Triazines	79
1.10	Conclusion	83
	References	84
2	Structure and Reactivity of Anionic σ-Complexes	95
2.1	Introduction	95
2.2	Structural Features of σ -Complexes	96
2.2.1	X-Ray Crystallography	96
2.2.2	Gas-Phase Meisenheimer Complexes	100
2.2.3	NMR Spectroscopy	103
2.2.3.1	Complexation at Unsubstituted Carbons	103
2.2.3.2	Complexation at Substituted Carbons	114
2.2.3.3	Complexation versus Proton Abstraction	123
2.3	Thermodynamics and Kinetics of σ -Complex Formation	125
2.3.1	The Nature of the Aromatic System	126
2.3.2	The Effect of Ring Substituents	129
2.3.3	Nucleophilic Reactivity at Substituted versus Unsubstituted Carbons: Steric Effects	135
2.3.3.1	Relative Reactivities and Stabilities of 1-Substituted and 1,1-Disubstituted Complexes	135
2.3.3.2	Isomeric Addition at Substituted and Unsubstituted Carbons of Electron-Deficient Aromatics: Relevance to Nucleophilic Aromatic Substitution Processes	140
2.3.4	Intramolecular Additions: Spiro Complexes	145
2.3.5	Diadduct Formation: Meta Bridging	148
2.3.6	The Effect of the Nucleophile	150
2.3.7	Solvent and Medium Effects	152
	References	156
3	The Superelectrophilic Dimension in S_NAr and Related σ-Complexation Processes	163
3.1	Introduction	163
3.2	The Classical Domain of S_NAr and Anionic σ -Complexation Reactivity	164
3.3	Reaching the Superelectrophilic Dimension	167
3.3.1	The Reference Water Reaction	167
3.3.2	σ -Complexation with Weak Carbon Nucleophiles	172
3.3.3	From the pK_aH_2O Scale to Mayr's Electrophilicity (E) Scale	174
3.3.4	Oxidation Potentials as Descriptors of the Superelectrophilic Dimension	180

3.4	The Synthetic Potential of σ -Complexation and S_NAr Reactivity in the Superelectrophilic Dimension	182
3.4.1	σ -Complexation Reactivity	182
3.4.2	The Synthetic Potential of S_NAr Substitutions: Normal (PiCl, NBD-Cl) versus Super (DNBF-Cl, DNBFZ-Cl) Electrophiles	186
3.5	Origin of the Superelectrophilicity of Neutral 10π Heteroaromatics	196
	References	198
4	Synthetic Aspects of Intermolecular S_NAr Reactions	205
4.1	Introduction	205
4.2	Intermolecular Displacements of a Nitro Group	206
4.2.1	<i>p</i> -, <i>o</i> -, and <i>m</i> -Dinitrobenzenes– Related Substrates	206
4.2.2	Mononitro-Substituted Benzenes and Heteroarenes	216
4.2.3	Dinitro- and Trinitro-Substituted Benzenes and Related Derivatives	228
4.3	Intermolecular Displacements of Halogen and Other Leaving Groups	236
4.3.1	The Effect of the Leaving Group – Synthetic Implications	236
4.3.2	S_NAr Couplings with Monoactivated Arenes	242
4.3.3	S_NAr Couplings with Polyhaloaromatics	251
4.3.4	S_NAr Couplings with Strongly Activated Arenes	255
4.3.5	S_NAr Couplings with Aza and Polyaza Heteroaromatics	263
4.4	Conclusion	269
	References	271
5	Intramolecular S_NAr Reactions	279
5.1	Introduction	279
5.2	S_NAr Cyclizations	280
5.2.1	Substitutions with Oxygen Nucleophiles	280
5.2.2	Substitutions with Nitrogen Nucleophiles	290
5.2.3	Substitutions by Sulfur Nucleophiles	296
5.2.4	Substitutions by Carbon Nucleophiles	298
5.2.5	Intramolecular S_NAr Reactions in Macrocyclization	300
5.3	Smiles Rearrangements	303
5.3.1	O \rightarrow N and N \rightarrow O Rearrangements	304
5.3.2	N \rightarrow N Rearrangements	311
5.3.3	O \rightarrow O Rearrangements	315
5.3.4	N \rightarrow S and S \rightarrow N Rearrangements	318
5.3.5	S \rightarrow O and Se \rightarrow O Rearrangements	321
5.3.6	Rearrangements with C–C Bond Formation. Truce–Smiles Rearrangements	325
5.4	Conclusion	331
	References	332

6	Nucleophilic Aromatic Substitutions of Hydrogen	337
6.1	Introduction	337
6.2	Reactions Involving Oxidation of σ -Complex-Type Intermediates	339
6.2.1	Spontaneous Oxidations	339
6.2.2	Reactions Involving an External Oxidizing Agent (ONSH)	351
6.2.2.1	Oxidation of Oxygen- and Nitrogen-Bonded Adducts	353
6.2.2.2	Oxidation of Carbon-Based σ^H Adducts	357
6.2.2.3	Electrochemical Oxidation	372
6.3	Vicarious Nucleophilic Aromatic Substitutions of Hydrogen (VNS)	374
6.3.1	VNS Amination and Hydroxylation Processes	374
6.3.2	VNS Substitutions with Carbon Nucleophiles	378
6.3.2.1	Effect of the Structure of the Nitroarene	379
6.3.2.2	Effect of the Structure of the Carbanion	384
6.4	Deoxygenative S_NAr^H Substitutions	395
6.5	Cine and Tele Substitutions	397
6.5.1	The Von Richter Rearrangement	398
6.5.2	<i>o</i> -Dinitro Six-Membered Ring Aromatics and Related Derivatives	400
6.5.3	<i>m</i> -Diactivated Arenes and Related Substrates	404
6.5.4	Cine and Tele Substitutions in Heterocyclic Series	407
6.5.4.1	Aza and Polyaza aromatics	407
6.5.4.2	Five-Membered Ring Heteroaromatics	409
6.6	Conclusion	414
	References	415
7	Other S_NAr Substitution Pathways	423
7.1	$S_N(ANRORC)$ Substitutions	423
7.1.1	Introduction	423
7.1.2	Aza Aromatics without Nitro Activation	423
7.1.3	Nitro-Activated Aza Aromatics	426
7.1.4	Conclusion	429
7.2	Radical Nucleophilic Aromatic Substitutions	430
7.2.1	Introduction	430
7.2.2	Radical Anion Formation in " S_NAr " Systems	431
7.2.3	Representative Radical Nucleophilic Aromatic Substitutions	438
7.2.4	Substitutions via Charge-Transfer Complexes of Anionic Radical Character	445
7.3	Nucleophilic Aromatic Photosubstitutions	448
7.3.1	General Features	448
7.3.2	S_N2Ar^* Reactions	450
7.3.3	$S_N(ET)Ar^*$ Reactions	453

7.3.4	S_N1Ar^* Reactions	455
7.3.5	Regioselectivity and Chemical Theory	456
7.3.5.1	The Frontier Molecular Orbital Theory	456
7.3.5.2	The “Energy Gap” Model and Other Recent Approaches	458
	References	459
	Index	465
