Introduction	1
Part I The Algebra–Geometry Lexicon	
1 Hilbert’s Nullstellensatz	7
1.1 Maximal Ideals	8
1.2 Jacobson Rings	12
1.3 Coordinate Rings	16
Exercises	19
2 Noetherian and Artinian Rings	23
2.1 The Noether and Artin Properties for Rings and Modules	23
2.2 Noetherian Rings and Modules	28
Exercises	30
3 The Zariski Topology	33
3.1 Affine Varieties	33
3.2 Spectra	36
3.3 Noetherian and Irreducible Spaces	38
Exercises	42
4 A Summary of the Lexicon	45
4.1 True Geometry: Affine Varieties	45
4.2 Abstract Geometry: Spectra	46
Exercises	48
Part II Dimension	
5 Krull Dimension and Transcendence Degree	51
Exercises	60

6	Localization	63
	Exercises	70
7	The Principal Ideal Theorem	75
	7.1 Nakayama's Lemma and the Principal Ideal Theorem.....	75
	7.2 The Dimension of Fibers	81
	Exercises	87
8	Integral Extensions	93
	8.1 Integral Closure	93
	8.2 Lying Over, Going Up, and Going Down	99
	8.3 Noether Normalization	104
	Exercises	111

Part III Computational Methods

9	Gröbner Bases	117
	9.1 Buchberger's Algorithm	118
	9.2 First Application: Elimination Ideals	127
	Exercises	133
10	Fibers and Images of Morphisms Revisited	137
	10.1 The Generic Freeness Lemma.....	137
	10.2 Fiber Dimension and Constructible Sets.....	142
	10.3 Application: Invariant Theory	144
	Exercises	148
11	Hilbert Series and Dimension	151
	11.1 The Hilbert–Serre Theorem.....	151
	11.2 Hilbert Polynomials and Dimension.....	157
	Exercises	161

Part IV Local Rings

12	Dimension Theory	167
	12.1 The Length of a Module	167
	12.2 The Associated Graded Ring	170
	Exercises	176
13	Regular Local Rings	181
	13.1 Basic Properties of Regular Local Rings.....	181
	13.2 The Jacobian Criterion.....	185
	Exercises	193

14 Rings of Dimension One 197

 14.1 Regular Rings and Normal Rings 197

 14.2 Multiplicative Ideal Theory 201

 14.3 Dedekind Domains..... 206

 Exercises..... 212

Solutions of Some Exercises 217

References..... 235

Notation 239
