Preface v

Denotations ix

1 Basic concepts and examples 1
- 1.1 On the definition of inverse and ill-posed problems 1
- 1.2 Examples of inverse and ill-posed problems 9

2 Ill-posed problems 22
- 2.1 Well-posed and ill-posed problems 24
- 2.2 On stability in different spaces 25
- 2.3 Quasi-solution. The Ivanov theorems 28
- 2.4 The Lavrentiev method 31
- 2.5 The Tikhonov regularization method 34
- 2.6 Gradient methods 42
- 2.7 An estimate of the convergence rate with respect to the objective functional 49
- 2.8 Conditional stability estimate and strong convergence of gradient methods applied to ill-posed problems 53
- 2.9 The pseudoinverse and the singular value decomposition of an operator 62

3 Ill-posed problems of linear algebra 68
- 3.1 Generalization of the concept of a solution. Pseudo-solutions 70
- 3.2 Regularization method 72
- 3.3 Criteria for choosing the regularization parameter 77
- 3.4 Iterative regularization algorithms 77
- 3.5 Singular value decomposition 79
- 3.6 The singular value decomposition algorithm and the Godunov method 87
- 3.7 The square root method 91
- 3.8 Exercises 92

4 Integral equations 98
- 4.1 Fredholm integral equations of the first kind 98
- 4.2 Regularization of linear Volterra integral equations of the first kind . . 104
- 4.3 Volterra operator equations with boundedly Lipschitz-continuous kernel 111

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.4 Local well-posedness and uniqueness on the whole 116
4.5 Well-posedness in a neighborhood of the exact solution 118
4.6 Regularization of nonlinear operator equations of the first kind 122

5 Integral geometry 129
5.1 The Radon problem 130
5.2 Reconstructing a function from its spherical means 138
5.3 Determining a function of a single variable from the values of its integrals. The problem of moments 139
5.4 Inverse kinematic problem of seismology 144

6 Inverse spectral and scattering problems 154
6.1 Direct Sturm–Liouville problem on a finite interval 156
6.2 Inverse Sturm–Liouville problems on a finite interval 163
6.3 The Gelfand–Levitan method on a finite interval 166
6.4 Inverse scattering problems 172
6.5 Inverse scattering problems in the time domain 180

7 Linear problems for hyperbolic equations 187
7.1 Reconstruction of a function from its spherical means 187
7.2 The Cauchy problem for a hyperbolic equation with data on a time-like surface 190
7.3 The inverse thermoacoustic problem 192
7.4 Linearized multidimensional inverse problem for the wave equation . 193

8 Linear problems for parabolic equations 209
8.1 On the formulation of inverse problems for parabolic equations and their relationship with the corresponding inverse problems for hyperbolic equations 209
8.2 Inverse problem of heat conduction with reverse time (retrospective inverse problem) 214
8.3 Inverse boundary-value problems and extension problems 227
8.4 Interior problems and problems of determining sources 228

9 Linear problems for elliptic equations 233
9.1 The uniqueness theorem and a conditional stability estimate on a plane 234
9.2 Formulation of the initial boundary value problem for the Laplace equation in the form of an inverse problem. Reduction to an operator equation 238
9.3 Analysis of the direct initial boundary value problem for the Laplace equation 239
9.4 The extension problem for an equation with self-adjoint elliptic operator 244

10 Inverse coefficient problems for hyperbolic equations 249
10.1 Inverse problems for the equation $u_{tt} = u_{xx} - q(x)u + F(x,t)$ . . . 249
10.2 Inverse problems of acoustics 272
10.3 Inverse problems of electrodynamics 286
10.4 Local solvability of multidimensional inverse problems 294
10.5 Method of the Neumann to Dirichlet maps in the half-space 302
10.6 An approach to inverse problems of acoustics using geodesic lines . . 306
10.7 Two-dimensional analog of the Gelfand–Levitan–Krein equation . . . 315

11 Inverse coefficient problems for parabolic and elliptic equations 319
11.1 Formulation of inverse coefficient problems for parabolic equations. Association with those for hyperbolic equations 319
11.2 Reducing to spectral inverse problems 321
11.3 Uniqueness theorems 323
11.4 An overdetermined inverse coefficient problem for the elliptic equation. Uniqueness theorem 327
11.5 An inverse problem in a semi-infinite cylinder 328

Appendix A 331
A.1 Spaces 331
A.2 Operators 350
A.3 Dual space and adjoint operator 371
A.4 Elements of differential calculus in Banach spaces 382
A.5 Functional spaces 385
A.6 Equations of mathematical physics 400

Appendix B 411
B.1 Supplementary exercises and control questions 411
B.2 Supplementary references 413

Epilogue 431

Bibliography 433
