Pharmaceutical Statistics

Practical and Clinical Applications

Third Edition

Sanford Bolton

*Visiting Professor
University of Arizona
Tucson, Arizona*

MARCEL DEKKER, INC.

NEW YORK • BASEL • HONG KONG

CONTENTS

Preface	v
1. Basic Definitions and Concepts	1
1.1 Variables and Variation	1
1.2 Frequency Distributions and Cumulative Frequency Distributions	5
1.3 Sample and Population	12
1.4 Measures Describing the Center of Data Distributions	14
1.5 Measurement of the Spread of Data	20
1.6 Coding	28
1.7 Precision, Accuracy, and Bias	30
1.8 The Question of Significant Figures	33
Key Terms	35
Exercises	35
References	37
2. Data Graphics	39
2.1 Introduction	40
2.2 The Histogram	41
2.3 Construction and Labeling of Graphs	41
2.4 Scatter Plots (Correlation Diagrams)	51
	vii

2.5	Semilogarithmic Plots	51
2.6	Other Descriptive Figures	54
	Key Terms	58
	Exercises	58
	References	61
3.	Introduction to Probability: The Binomial and Normal Probability Distributions	62
3.1	Introduction	62
3.2	Some Basic Probability	63
3.3	Probability Distributions—The Binomial Distribution	68
3.4	Continuous Data Distributions	78
3.5	Other Common Probability Distributions	94
	Key Terms	98
	Exercises	98
	References	101
4.	Choosing Samples	102
4.1	Introduction	102
4.2	Random Sampling	104
4.3	Other Sampling Procedures: Stratified, Systematic, and Cluster Sampling	110
4.4	Sampling in Quality Control	113
	Key Terms	116
	Exercises	116
	References	119
5.	Statistical Inference: Estimation and Hypothesis Testing	120
5.1	Statistical Estimation (Confidence Intervals)	121
5.2	Statistical Hypothesis Testing	131
5.3	Comparison of Variances in Independent Samples	174
5.4	Test of Equality of More than Two Variances	178
5.5	Confidence Limits for a Variance	179
5.6	Tolerance Intervals	181
	Key Terms	183
	Exercises	183
	References	187
6.	Sample Size and Power	189
6.1	Introduction	190

6.2	Determination of Sample Size for Simple Comparative Experiments for Normally Distributed Variables	192
6.3	Determination of Sample Size for Binomial Tests	199
6.4	Determination of Sample Size to Obtain a Confidence Interval of Specified Width	201
6.5	Power	203
6.6	Sample Size and Power for More than Two Treatments	207
6.7	Sample Size for Bioequivalence Studies	210
	Key Terms	211
	Exercises	213
	References	214
7.	Linear Regression and Correlation	216
7.1	Introduction	217
7.2	Analysis of Standard Curves in Drug Analysis: Application of Linear Regression	222
7.3	Assumptions in Tests of Hypotheses in Linear Regression	224
7.4	Estimate of the Variance: Variance of Sample Estimates of the Parameters	225
7.5	A Drug Stability Study: A Second Example of the Application of Linear Regression	229
7.6	Confidence Intervals in Regression Analysis	234
7.7	Weighted Regression	239
7.8	Analysis of Residuals	241
7.9	Nonlinear Regression	243
7.10	Correlation	248
7.11	Comparison of Variances in Related Samples	257
	Key Terms	259
	Exercises	259
	References	263
8.	Analysis of Variance	265
8.1	One-Way Analysis of Variance	265
8.2	Planned Versus a Posteriori (Unplanned) Comparisons in ANOVA	274
8.3	Another Example of One-Way Analysis of Variance: Unequal Sample Sizes and the Fixed and Random Models	286
8.4	Two-Way Analysis of Variance (Randomized Blocks)	289

8.5	Statistical Models**	306
8.6	Analysis of Covariance**	308
8.7	ANOVA for Pooling Regression Lines as Related to Stability Data	315
	Key Terms	320
	Exercises	321
	References	325
9.	Factorial Designs**	326
9.1	Definitions (Vocabulary)	326
9.2	Two Simple Hypothetical Experiments to Illustrate the Advantages of Factorial Designs	331
9.3	Performing Factorial Experiments: Recommendations and Notation	335
9.4	A Worked Example of a Factorial Experiment	338
9.5	Fractional Factorial Designs	345
9.6	Some General Comments	351
	Key Terms	351
	Exercises	351
	References	354
10.	Transformations and Outliers	355
10.1	Transformations	356
10.2	Outliers	369
	Key Terms	382
	Exercises	382
	References	383
11.	Experimental Design in Clinical Trials	384
11.1	Introduction	384
11.2	Some Principles of Experimental Design and Analysis	385
11.3	Parallel Design	391
11.4	Crossover Designs and Bioavailability/Bioequivalence Studies	397
11.5	Repeated Measures (Split-Plot) Designs**	428
11.6	Multiclinic Studies	435
11.7	Interim Analyses	437

**A more advanced topic.

Key Terms	440
Exercises	440
References	442
12. Quality Control	444
12.1 Introduction	444
12.2 Control Charts	445
12.3 Acceptance Sampling and Operating Characteristic Curves	463
12.4 Statistical Procedures in Assay Development	467
12.5 Establishing In-House Limits	478
12.6 Some Statistical Aspects of Quality and the “Barr Decision”	482
Key Terms	487
Exercises	487
References	489
13. Validation	490
13.1 Process Validation	491
13.2 Assay Validation	505
13.3 Concluding Remarks	513
Key Terms	513
Exercises	513
References	514
14. Consumer Testing	515
14.1 Introduction	515
14.2 Product Comparisons	516
14.3 Discrimination Tests: The Triangle Test	529
Key Terms	535
Exercises	535
References	536
15. Nonparametric Methods	537
15.1 Data Characteristics and an Introduction to Nonparametric Procedures	538
15.2 Sign Test	541
15.3 Wilcoxon Signed Rank Test	544
15.4 Wilcoxon Rank Sum Test (Test for Differences Between Two Independent Groups)	549

15.5	Kruskal–Wallis Test (One-Way ANOVA)	557
15.6	Friedman Test (Two-Way Analysis of Variance)	560
15.7	Nonparametric Analysis of Covariance	565
15.8	Runs Test for Randomness	567
15.9	Contingency Tables	570
	Key Terms	584
	Exercises	584
	References	588
16.	Optimization Techniques**	590
16.1	Introduction	590
16.2	Optimization Using Factorial Designs	591
16.3	Composite Designs to Estimate Curvature	604
16.4	The Simplex Lattice	610
16.5	Sequential Optimization	619
	Key Terms	624
	Exercises	624
	References	625
Appendix I: Some Properties of the Variance		627
I.1	Pooling Variances	627
I.2	Components of Variance	628
I.3	Variance of Linear Combinations of Independent Variables	629
	Reference	630
Appendix II: Comparison of Slopes and Testing of Linearity: Determination of Relative Potency		631
	Reference	637
Appendix III: Multiple Regression		638
	References	644
Appendix IV: Tables		645
Table IV.1	Random Numbers	645
Table IV.2	Cumulative Normal Distribution: Cumulative Area Under the Normal Distribution (Less Than or Equal to Z)	646

**A more advanced topic.
