## **Part One: Introduction** **1**

<b>1 The car of the future – Michel Parent</b>	<b>3</b>
1.1 Such a wonderful product. . .	3
1.2 Difficulties now and ahead	4
1.3 Emerging technologies	13

## **Part Two: Intelligent vehicle sensor technologies** **19**

<b>2 The CAN bus – Nan Liang and Dobrivoje Popovic</b>	<b>21</b>
2.1 Introduction	21
2.1.1 What is CAN?	22
2.1.2 How does it work?	23
2.1.3 Main features of the CAN bus	24
2.1.4 Advantages of CAN	25
2.1.5 Application fields	25
2.2 Functional concepts	26
2.2.1 Data exchange concept	26
2.2.2 Message and frame formats	27
2.2.3 Error detection and error handling	30
2.3 Hierarchical organization	31
2.3.1 Layering concept	35
2.3.2 Physical layer	37
2.3.3 Data link layer	41
2.3.4 Application layer	48
2.3.5 CANopen communication profile	49
2.4 Implementations	52
2.4.1 General layout	53
2.4.2 CAN controller	53

2.4.3	CAN products	55
2.4.4	HECAN	55
2.5	CAN applications	55
2.5.1	General overview	55
2.5.2	Applications in vehicles	56
2.5.3	Other CAN applications	58
2.6	CAN-related standards	60
2.6.1	ISO 11519: Low speed CAN	60
2.6.2	ISO 11898: High speed CAN	61
2.6.3	Vehicle-related components standards	62
2.7	The future of CAN	62
	References	64
<b>3</b>	<b>Microcontrollers and micro-electronic technology – Kurshid Alam and Ljubo Vlacic</b>	<b>65</b>
3.1	Introduction	65
3.2	Microcontrollers – an embedded microcomputer	65
3.2.1	Address bus, data bus and control bus	66
3.2.2	Central processing unit	66
3.2.3	Memory	68
3.2.4	Input/output (I/O) interface	68
3.3	Microprocessor or microcontroller?	69
3.4	Product design using a microcontroller	70
3.5	Microtechnology	71
3.5.1	Introduction – brief outline of circuit integration	71
3.5.2	The transistor – the active element of integrated circuits	78
3.5.3	Technologies for monolithic chip integration of circuits	82
3.6	Conclusion	85
	References	85
<b>4</b>	<b>Vehicle optical sensor – Yuichi Shinmoto</b>	<b>87</b>
4.1	Introduction	87
4.2	Laser radar	87
4.2.1	The basic principles	88
4.2.2	Example of laser radar	89
4.3	Non-contact ground velocity detecting sensor	90
4.3.1	Comparison of respective methods	90
4.3.2	The principles of the spatial filter method	93
4.3.3	Ground velocity sensors for vehicles	95
4.4	Road surface recognition sensor	96
4.4.1	Measuring reflexivity	97
4.4.2	Surface recognition by the spatial filter method	98
4.4.3	GVS (ground view sensor)	99
4.5	Vehicle sensors for ETC systems	103
4.5.1	Compact vehicle sensor	104
4.5.2	Optical axle-counting sensor	108

4.6 Conclusion	111
References	111
<b>5 Towards intelligent automotive vision systems – Christoph Stiller</b>	<b>113</b>
5.1 Introduction and motivation	113
5.2 Applications of vision in driver assistance systems	116
5.3 Operating principles	118
5.3.1 Components of a vision sensor system	118
5.3.2 Sensor raw data analysis	118
5.4 Applications and results	122
5.4.1 Autonomous driving	123
5.4.2 Heavy truck coupling	125
5.5 Conclusions	127
Acknowledgements	128
References	128
<b>6 From door to door – principles and applications of computer vision for driver assistant systems – Uwe Franke, Dariu Gavrila, Axel Gern, Steffen Görzig, Reinhard Janssen, Frank Paetzold and Christian Wöhler</b>	<b>131</b>
6.1 Introduction	131
6.1.1 Vision in cars: why?	132
6.1.2 One decade of research at DaimlerChrysler	132
6.1.3 A comprehensive driver assistance approach	133
6.1.4 Outline of the chapter	134
6.2 Driver assistance on highways	134
6.2.1 Lane recognition	135
6.2.2 Traffic sign recognition (TSR)	141
6.3 Driver assistance in urban traffic	147
6.3.1 Stereo vision	147
6.3.2 Shape-based analysis	152
6.3.3 Road recognition	157
6.4 Object recognition as a classification problem	161
6.4.1 General aspects	161
6.4.2 Traffic lights and signs	166
6.4.3 Pedestrian recognition	169
6.4.4 Further examples	175
6.5 Building intelligent systems	177
6.5.1 ANTS: a multi-agent system	178
6.5.2 UTA II on the road	182
6.6 Summary	185
References	186
<b>7 Radio communication technologies for vehicle information systems – Shingo Ohmori, Tetsuo Horimatsu, Masayuki Fujise and Kiyohito Tokuda</b>	<b>189</b>

7.1	Introduction	189
7.1.1	Overview	189
7.1.2	Vision for ITS communications	190
7.1.3	International activities for standardization	194
7.2	ITS communication systems	196
7.2.1	Overview	196
7.2.2	Multimedia communication in a car	196
7.2.3	Current ITS communication systems and services	201
7.2.4	The prospect of growing technology	204
7.3	Vehicle-vehicle and road-vehicle communication systems	206
7.3.1	Overview	206
7.3.2	Road-vehicle communication system	206
7.3.3	Inter-vehicle communication system	213
7.4	Device technologies	219
7.4.1	Overview	219
7.4.2	Optical devices	220
7.4.3	Millimetre-wave devices	224
	References	227
<b>8</b>	<b>Global positioning technology in the intelligent transportation space – Patrick Herron, Chuck Powers and Michael Solomon</b>	<b>229</b>
8.1	History of GPS	229
8.2	The NAVSTAR GPS system	230
8.2.1	GPS system characteristics	231
8.2.2	The navigation message	232
8.3	Fundamentals of satellite-based positioning	234
8.3.1	The basic science of global positioning	234
8.3.2	Positioning techniques	236
8.4	GPS receiver technology	242
8.4.1	GPS receiver components	242
8.4.2	GPS receiver solutions	244
8.4.3	Performance considerations	247
8.5	Applications for GPS technology	249
8.5.1	Basic positioning applications	249
8.5.2	Location-based services	252
8.6	Conclusion	254
	Further reading	254
	<b>Part Three: Intelligent vehicle decision and control technologies</b>	<b>257</b>
<b>9</b>	<b>Adaptive control system techniques – Muhidin Lelic and Zoran Gajic</b>	<b>259</b>
9.1	Automatic control of highway traffic and moving vehicles	259
9.2	Adaptive control of highway traffic and moving vehicles	261
9.3	Conventional control schemes	262
9.4	Adaptive control – an overview	264
9.4.1	Gain scheduling	265

9.4.2	Model reference adaptive control (direct adaptive control)	266
9.4.3	Self-tuning control (indirect adaptive control)	266
9.5	System models for adaptive control	267
9.5.1	System identification basics	268
9.5.2	Recursive parameter estimation	268
9.5.3	Estimator initialization	270
9.6	Design of self-tuning controllers	271
9.6.1	Generalized minimum variance (GMV) control	271
9.6.2	Pole placement control	276
9.6.3	Model predictive control	278
9.6.4	Generalized predictive control	279
9.6.5	Generalized pole placement control	281
9.7	Concluding remarks	284
	References	284
<b>10</b>	<b>Fuzzy control – Mark Hitchings, Ljubo Vlacic and Vojislav Kecman</b>	<b>289</b>
10.1	Introduction	289
10.1.1	Intelligent control techniques	289
10.1.2	Distance and tracking control – problem definition	293
10.2	Fuzzy control systems – theoretical background	294
10.2.1	Overview	294
10.2.2	Additive fuzzy systems – the standard additive model	297
10.2.3	Fuzzification methods	299
10.2.4	Fuzzy inference methods	301
10.2.5	Defuzzification methods	304
10.3	Fuzzy control systems – design steps	307
10.4	Fuzzy control of distance and tracking	307
10.4.1	Considerations	308
10.4.2	Design strategy	309
10.4.3	System requirements and functions	311
10.4.4	Definitions of linguistic variables	313
10.4.5	System structure	314
10.4.6	Fuzzification method	316
10.4.7	Fuzzy inference rules	321
10.4.8	Defuzzification method	322
10.5	Conclusion	325
10.6	Abbreviations	326
	References	327
<b>11</b>	<b>Decisional architectures for motion autonomy – Christian Laugier and Thierry Fraichard</b>	<b>333</b>
11.1	Introduction	333
11.2	Robot control architectures and motion autonomy	334
11.2.1	Definitions and taxonomy	334
11.2.2	Deliberative architectures	335
11.2.3	Reactive architectures	336

11.2.4	Hybrid architectures	339
11.2.5	Conclusion	348
11.3	Sharp control and decisional architecture for autonomous vehicles	348
11.3.1	Overview of the Sharp architecture	348
11.3.2	Models of the vehicles	350
11.3.3	Concept of sensor-based manoeuvre	351
11.3.4	Reactive trajectory following	352
11.3.5	Parallel parking	355
11.3.6	Platooning	358
11.4	Experimental results	360
11.4.1	Experimental vehicles	360
11.4.2	Experimental run of the trajectory following manoeuvre	361
11.4.3	Experimental run of the parallel parking manoeuvre	362
11.4.4	Experimental run of the platooning manoeuvre	363
11.5	Motion planning for car-like vehicles	364
11.5.1	Introduction	364
11.5.2	Main approaches to trajectory planning	365
11.5.3	Trajectory planning and state-time space	366
11.5.4	Case study	366
11.5.5	Solution algorithm	372
11.5.6	Nonholonomic path planning	378
