Manual of Geospatial Science and Technology

Edited by

John D. Bossler

Associate Editors:

John R. Jensen
Robert B. McMaster
Chris Rizos

London and New York

Contents

List of Contributors xv
Preface xxii
Acknowledgments xxiii

PART I
Prerequisites 1

1 An introduction to geospatial science and technology 3
JOHN D. BOSSLER

1.1 About this manual 3
1.2 Geospatial data 3
1.3 Spatial data infrastructure 4
1.4 Relationship of geospatial science to other disciplines 4
1.5 Three important geospatial technologies 5
References 7

2 Coordinates and coordinate systems 8
JOHN D. BOSSLER

2.1 Rectangular coordinates 8
2.2 Polar coordinates 8
2.3 Transformation between polar and rectangular coordinates 9
2.4 Rectangular coordinates in three dimensions 10
2.5 Spherical coordinates 11
2.6 Ellipsoidal coordinates 11
2.7 State plane coordinate systems (US) 13
2.8 Universal transverse mercator (UTM) 14
References 15

3 Datums and geodetic systems 16
JOHN D. BOSSLER

3.1 Geodetic datums 16

3.2 Geodetic reference systems 18
3.3 Applications 22
References 25

4 Coordinate transformations 27
AYMAN HABIB

4.1 Introduction 27
4.2 Translation 27
4.3 Rotation 28
4.4 Three-dimensional similarity transformation (seven-parameter transformation) 32
4.5 Map projections and transformations 39
References 49

5 Computer basics 50
ALAN SAALFELD

5.1 Some guidelines for dealing with computer technology 50
5.2 Assembling the right computer system 51
5.3 Computers and their operating systems 51
5.4 Recent PC improvements 53
5.5 Trends in computer construction 53
5.6 General software use considerations for all users 55
5.7 Selection criteria for users with different experience levels 56
5.8 Computer hardware recommendations 58
References 61

6 Basic electromagnetic radiation 62
CAROLYN J. MERRY

6.1 Electromagnetic energy 62
6.2 Electromagnetic spectrum 63
6.3 Energy transfer 65
6.4 Energy/matter interactions in the atmosphere 69
6.5 Energy/matter interactions with the terrain 71
References 74

PART 2
Global Positioning System (GPS) 75

7 Introducing the Global Positioning System 77
CHRIS RIZOS

7.1 Background 77

7.2 The issue of GPS datums 85
7.3 The performance of GPS 87
7.4 High precision GPS positioning 91
References 94

8 Fundamentals of GPS signals and data 95
HASANUDDIN ABIDIN

8.1 GPS signal characteristics 95
8.2 Codes and pseudorange measurements 98
8.3 Broadcast navigation message 101
8.4 Carrier waves and carrier phase measurements 102
8.5 GPS signal propagation 105
8.6 Differencing of GPS data 107
References 112

9 GPS mathematical models for single point and baseline solutions 114
GEORGE DEDES AND CHRIS RIZOS

9.1 GPS mathematical models 114
9.2 Preparing for data processing 115
9.3 Single-point positioning (SPP) 118
9.4 Baseline determination 121
References 126

10 GPS instrumentation issues 127
DOROTA GREJNER-BRZEZINSKA

10.1 Antenna and preamplifier 128
10.2 RF front-end section and the signal processing block 131
10.3 Other instrumental components 134
10.4 Choosing a GPS receiver 135
References 144

11 Making sense of the GPS techniques 146
CHRIS RIZOS

11.1 High productivity GPS surveying techniques 147
11.2 Real-time GPS surveying and mapping techniques 153
11.3 System configuration and data link issues 155
References 161

12 GPS projects: some planning issues 162
MIKE STEWART AND CHRIS RIZOS

12.1 The GPS technique 163

12.2 Standards and specifications 167
12.3 Selecting the appropriate technique 170
12.4 The issue of quality control in project design 174
12.5 Project planning tasks 176
References 181

13 Carrying out a GPS surveying/mapping task 183
MIKE STANOIKOVICH AND CHRIS RIZOS

13.1 US Standards and Specifications for GPS relative positioning techniques 183
13.2 Surveying/mapping applications: guidelines for GPS 186
13.3 On-site procedures 192
13.4 Tying up 'loose ends' 195
References 199

14 Servicing the GPS user 201
GÉRARD LACHAPELLE, SAM RYAN AND CHRIS RIZOS

14.1 Real-time DGPS services 201
14.2 Services and data from continuously-operating GPS networks 208
14.3 Information, data and product services for geospatial professionals 211
References 215

15 Where do we go from here? 216
CHRIS RIZOS

15.1 GPS instrumentation and techniques 216
15.2 Institutional issues 219
15.3 Continuously-operating GPS networks 221
15.4 GPS satellite and modernization plans 223
15.5 Other satellite-based positioning systems 226
References 228

PART 3
Remote sensing 231

16 Photogrammetric and remote sensing considerations 233
DON L. LIGHT AND JOHN R. JENSEN

16.1 Overview 233
16.2 Photogrammetry 233
16.3 Remote sensing 236
16.4 Relationship of photogrammetry and remote sensing to the other mapping sciences (surveying, GPS, cartography, GIS, geography) 239

16.5 When is a photogrammetric approach the best solution? 243
16.6 When is a remote sensing approach the best solution? 243
16.7 Who are the users? 244
16.8 National and international societies devoted to photogrammetry and remote sensing 249
16.9 Summary 251
References 251

17 The remote sensing process: how do we collect the required *in situ* and remotely sensed data? 253
MINHE JI

17.1 Introduction 253
17.2 Identify the remote sensing problem(s) to be addressed and objectives of the study 253
17.3 Identify the variables to be measured using in situ techniques 254
17.4 Identify the variables to be measured using remote sensing techniques 260
17.5 What are the bureaucratic problems associated with the project? 273
17.6 What remote sensing systems are available to collect the required information? 274
17.7 How do I process the remote sensor data to turn it into useful information? 274
References 274

18 What remote sensing system should be used to collect the data? 276
JOHN D. ALTHAUSEN

18.1 Introduction 276
18.2 Photo/imagery type 276
18.3 Data structure and format 277
18.4 Platform type 278
18.5 Sensor type 279
18.6 Ordering specifications 292
References 296

19 Information extraction from remotely sensed data 298
SUNIL NARUMALANI, JOSEPH T. HLADY AND JOHN R. JENSEN

19.1 Introduction 298
19.2 Analog image processing 299
19.3 Digital image processing 304
19.4 Advanced digital image understanding techniques 316
19.5 Summary 321
References 322

20 Remote sensing digital image processing system hardware and software considerations 325
JOHN R. JENSEN AND RYAN R. JENSEN

20.1 Introduction 325
20.2 Image processing system characteristics 325
20.3 Image processing and GIS software requirements 336
20.4 Commercial and publicly available digital image processing systems 346
20.5 Summary 346
References 346

21 Quality assurance and accuracy assessment of information derived from remotely sensed data 349
RUSSELL G. CONGALTON AND LUCIE C. PLOURDE

21.1 Introduction 349
21.2 Sources of error 350
21.3 Map accuracy assessment considerations 350
21.4 Single-date thematic map accuracy assessment 352
21.5 Change detection map thematic accuracy assessment 359
21.6 Conclusions 361
References 361

22 Selected examples of remote sensing projects 364
DONALD C. RUNDQUIST, JOHN R. JENSEN, MAURICE NYQUIST AND THOMAS W. OWENS

22.1 Agricultural crop classification using satellite remote sensing 364
22.2 Vegetation mapping program using aerial photography 369
22.3 Mapping and assessing water quality using remote sensing 376
22.4 Updating tax maps using aerial photography and soft-copy photogrammetry 381
References 388

23 Remote sensing – future considerations 389
JOHN R. JENSEN

23.1 Introduction 389
23.2 Remote sensing data continuity 389
23.3 Lack of certain remote sensing instruments 393
23.4 The necessity of improved information extraction algorithms 393
23.5 Data integration (conflation), standards, and interoperability 395
References 397

PART 4
Geographic Information Systems 399

24 Geographic Information Systems (GIS) and science 401
ROBERT B. MCMASTER AND WILLIAM J. CRAIG

24.1 Introduction 401
24.2 What is a GIS? 402
24.3 Basic core knowledge in GSci 403
24.4 A brief history of GIS 403
24.5 Societal implications of GIS 407
24.6 The literature of GIS/GSci 408
24.7 Conclusions 409
References 409

25 Fundamentals of Geographic Information Systems (GIS) 411
DAVID A. BENNETT AND MARC P. ARMSTRONG

25.1 Introduction 411
25.2 Background 411
25.3 The language of GIS 414
25.4 Putting it all together through data transformations 420
25.5 Limitations and opportunities 426
25.6 Conclusions 427
References 428

26 Geographic data structures 431
MAY YUAN

26.1 Introduction 431
26.2 Spatial data models: object and field representations 432
26.3 Spatial data structures: vector and raster data 436
26.4 Representing time in geographic data structures 444
26.5 Challenges in spatial data structures 446
References 447

27 Processing spatial data 450
FRANCIS J. HARVEY

27.1 Materials and tools 450
27.2 Types of data to choose from 451
27.3 Tools as transformations 454
27.4 In the workshop: operations 456
27.5 Theories for spatial information processing: spatial transformations 463
References 464

28 Hardware and software 465
MARK LINDBERG

28.1 Recent history 465
28.2 The basic parts of a GIS system 466
28.3 Software guidelines 468
28.4 Hardware guidelines 469
28.5 Recommendations 473
28.6 Conclusion 480
References 481

29 Spatial analysis and modeling 482
MICHAEL F. GOODCHILD

29.1 Introduction 482
29.2 Organizing the possibilities 483
29.3 Methods of analysis for points 484
29.4 Analysis of areas 488
29.5 Raster analysis 490
29.6 Optimization and design 497
29.7 Summary 498
References 499

30 Spatial data quality 500
JOEL MORRISON

30.1 Introduction 500
30.2 The specification of spatial data quality 503
30.3 Spatial data quality and its measurement 511
30.4 Spatial data quality and its visualization 513
30.5 Conclusions 514
References 515

31 Cartographic symbolization and visualization 517
ROBERT B. MCMASTER

31.1 Introduction 517
31.2 Cartographic generalization 518
31.3 Cartographic symbolization 519
31.4 Common types of thematic maps 523
31.5 Data classification 525
31.6 Graphic design, a graphical hierarchy, and figure ground 528
31.7 Visualization and modern cartography 528
31.8 Conclusions 530
References 530

32 Carrying out a GIS project 532
REBECCA SOMERS

32.1 Introduction 532
32.2 The GIS implementation process 533
32.3 Planning a GIS project and getting started 534
32.4 Analyzing requirements 536
32.5 Designing system components 537
32.6 Acquiring and developing GIS components 542
32.7 Managing GIS operations 544
32.8 GIS implementation challenges and success factors 544
References 546

PART 5
Applications 549

33 Biophysical and human-social applications 551
SUSANNA MCMASTER AND ROBERT B. MCMASTER

33.1 Applications of GIS 551
33.2 Biophysical applications 551
33.3 Human-social applications 557
33.4 Conclusions 561
References 561

34 Local government applications 563
ZORICA NEDOVIĆ-BUDIĆ

34.1 Diffusion of spatial technologies in local governments 563
34.2 Examples of local government applications 563
34.3 Building a local database 569
34.4 Managing local government geographic information resources 570
34.5 Conclusion 572
References 573

35 Geographic information technology in state governments of the US 575
LISA WARNECKE AND DREW DECKER

35.1 Introduction 575
35.2 Applications 575
35.3 Factors impacting GIT in state governments 582
35.4 Institutionalization of statewide GI/GIT approaches 584
35.5 State GI/GIT coordination roles, responsibilities and activities 586
35.6 Statewide data initiatives 587
35.7 Conclusion 591
References 591

36 National, international, and global activities in geospatial science 593
JOHN J. MOELLER AND MARK E. REICHARDT

36.1 Introduction 593
36.2 National needs and requirements 596
36.3 The role of national data programs 596
36.4 Case examples of some leading nations 597
36.5 Beyond borders – regional and global spatial data infrastructures 603
References 606

37 Private sector applications 608
ROBIN ANTENUCCI AND JOHN ANTENUCCI

37.1 Technology and information integration yield profits 608
37.2 Commercial applications 609
37.3 Financial advantage favors integration 615
References 616
