

Complex Adaptive Systems

An Introduction

Heinz Georg Schuster

Scator Verlag

Contents

1	Introduction	1
1.1	Motivation	1
1.2	How We Shall Proceed	4
2	Concepts of CAS	9
2.1	Introduction	9
2.2	Computation in Dynamical Systems	10
2.2.1	A Simple Adaptive System	10
2.2.2	Attractors in Dissipative Dynamical Systems	14
2.3	Adaptation of a Population of Species	18
2.3.1	Adaptation by Selection of the Fittest	18
2.3.2	Influence of Mutations	19
2.3.3	Relaxation in an Energy Landscape	20
2.4	Measures of Complexity	21
2.4.1	Number of Elements	22
2.4.2	Mutual Information	22
2.4.3	Computational Complexity	25
2.5	Cellular Automata	28
2.5.1	Emerging Structures	28
2.5.2	Computations with the Game of Life	29
2.6	Control	34
2.6.1	Feedback Control	34
2.6.2	Optimal Control	35
2.7	Networks	37
2.8	Conclusions	41
2.9	Exercises	42
2.9.1	Mutations combined with selection	42
2.9.2	Mutual information of a two spin system	44

2.9.3	Optimal Control	44
3	Prebiotic and Artificial Evolution	49
3.1	Prebiotic Evolution	49
3.1.1	Eigen's Equations	52
3.1.2	Eigen's Error Catastrophe	58
3.1.3	Hypercycles	67
3.1.4	Kauffman's Reaction Network	72
3.2	Self-Reproducing Automata	77
3.2.1	Logical Organization of Self-reproduction	78
3.2.2	Examples of Self-reproducing Automata	80
3.3	Evolutionary Computation	87
3.3.1	Genetic Algorithms and Crossover	87
3.3.2	Classifier Systems	96
3.4	The Kauffman Model	103
3.5	Conclusions	110
3.6	Exercises	112
3.6.1	Solution of the equations of motion for crossover	112
3.6.2	Decay of correlations	113
4	Neural Networks	115
4.1	Introduction	115
4.2	Basic Elements	118
4.2.1	Neurons	118
4.2.2	Synapses	131
4.3	Computing with Neural Networks.	136
4.3.1	The Hopfield Model	138
4.3.2	The Winner-Take-All Network	141
4.4	Learning in Neural Networks	146
4.4.1	Unsupervised Learning	146
4.4.2	Supervised Learning	162
4.4.3	Generalization	173
4.4.4	Active Learning	176
4.5	The Role of Time in Neural Networks.	180
4.5.1	Noise	182
4.5.2	Delays	183
4.5.3	Blind Source Separation Using Delays	188
4.5.4	Oscillations	192
4.5.5	Fast Synaptic Plasticity	202

4.6	Conclusions	207
4.7	Exercises	211
4.7.1	Computing with soft neurons.	211
4.7.2	The hidden treasure	212
4.7.3	Relation of Bayes theorem to learning.	215
4.7.4	Learning of temporal sequences.	216
5	Games and Coevolution	217
5.1	Introduction	217
5.2	Evolutionary Games	221
5.2.1	The Prisoner's Dilemma Game	224
5.2.2	Prisoner's Dilemma on a Lattice	231
5.3	Self Organized Criticality and Coevolution	233
5.3.1	Simplest Possible Model of Self-Organized Criticality	236
5.3.2	The Bak-Sneppen Model	243
5.4	"Combinatorial" Games	251
5.4.1	The Game of Hats and Self-Awareness	251
5.4.2	The Evolution of Syntax	259
5.5	Conclusions	264
5.6	Exercises	265
5.6.1	Distribution of species in the Bak - Sneppen model	265
5.6.2	Distribution of fitness for two competing species	267
5.6.3	The El Farol bar problem	269
6	Summary and Outlook	273
7	Appendix	279
7.1	Description of Noisy Dynamical Systems	279
7.1.1	Frobenius Perron Equation	280
7.1.2	Kramers Moyal Expansion	282
7.1.3	Fokker Planck Equation	283
7.2	A Primer on Deterministic Chaos	286
7.3	Computation	290
7.3.1	Boolean Circuits	290
7.3.2	Finite State Automata	295
7.3.3	Conclusions	301
7.4	Information, Mutual Information and Coding.	303
7.5	The Ising Model	310
7.5.1	Relaxation to Equilibrium	311

7.5.2	Mean Field Theory of Phase Transitions	318
7.5.3	The Ising Model with Infinite Ranged Interaction . . .	322
7.5.4	Path Integrals	324
7.5.5	Coupled Maps with Infinite Ranged Interactions . . .	325
7.6	Exercises	329
7.6.1	Linear noisy map	329
7.6.2	Liapunov function of the Ising model	330
7.6.3	Parallel versus sequential dynamics	331
7.6.4	Maximal information transfer at the border to chaos .	332
	Bibliography	337
	Index	353
