UNWIN HYMAN
Boston Sydney Wellington

1990

Contents

<i>Preface</i>	page vii
<i>Acknowledgements</i>	ix
<i>List of special topic boxes</i>	xvii
<i>List of tables</i>	xix
<i>Abbreviations</i>	xxi
PART I DEVELOPMENT OF THE BASIC STRUCTURES	1
1 <i>The problems of development: embryogenesis</i>	3
1.1 The problems of development	3
1.2 Changes in gene expression	4
1.3 Embryogenesis – the problems exemplified	5
1.4 Summary	14
General reading	15
Further reading	16
Notes	16
PART II ITERATIVE GROWTH: MERISTEM STRUCTURE AND FUNCTIONING	17
2 <i>Root and shoot meristems: structure and growth</i>	19
2.1 Module production	19
2.2 Meristem organization	20
2.3 How is the rate of cell division controlled in meristems?	27
2.4 Summary	36
Further reading	37
Notes	38

CONTENTS

3	<i>Meristem functioning: formation of branches, leaves, and floral organs</i>	39
3.1	Formation of branches	39
3.2	Leaf initiation	41
3.3	Changes in primordial initiation on flowering	51
3.4	Summary	56
	Further reading	57
	Notes	57
PART III CONTROL OF SHAPE AND DIRECTIONS OF GROWTH: THE CELLULAR BASIS OF FORM		59
4	<i>Shape, growth directions, and surface structure</i>	61
4.1	Maintenance of shape	61
4.2	The structural basis of axiality	65
4.3	Formation of a new axis and changes of growth direction	69
4.4	Surface structure and primordium formation	72
4.5	Summary	77
	Further reading	78
	Notes	79
5	<i>Control of the plane of cell division</i>	80
5.1	Cell division and its relation to the growth axis	80
5.2	Are changes in the shape of plant parts correlated with differential rates or planes of cell division?	82
5.3	Is the direction of growth determined by the plane of cell division, or is the plane of cell division consequential on the direction of growth?	84
5.4	Factors orientating the plane of cell division	86
5.5	Unequal cell divisions	89
5.6	The role of the cytoskeleton	92
5.7	The cytoskeleton and the plane of cell division	96
5.8	Summary	97
	Further reading	98
	Notes	99
6	<i>The cellular basis of polarity</i>	100
6.1	Development of polarity in <i>Fucus</i> and <i>Pelvetia</i> zygotes	100
6.2	Polarity in other cells – ion currents	106
6.3	Changing the polarity of growth	108

CONTENTS

6.4	Polarity in unequal divisions	112
6.5	Polarity in tip growth	117
6.6	Polarity of growth in individual, isolated cells	122
6.7	Summary	128
	Further reading	130
	Notes	130

PART IV CELL DIFFERENTIATION 133

7 *Control of the differentiation of vascular tissues* 135

7.1	Regeneration of vascular tissues in wounded plants	135
7.2	Formation of xylary elements in culture and cell suspensions	138
7.3	Induction of vascular tissues in callus: formation of nodules	143
7.4	Does cell differentiation require specific concentrations of inducers?	145
7.5	Differentiation of xylem and phloem: can either form alone?	147
7.6	Induction of vascular strands	149
7.7	Secondary vascular tissues	160
7.8	Summary	162
	Further reading	163
	Notes	164

8 *Cell enlargement, maturation, and differentiation* 165

8.1	Limits of cell division	165
8.2	Cell enlargement and maturation	167
8.3	Cell differentiation	177
8.4	Summary	187
	Further reading	188
	Notes	189

9 *Genes and development* 190

9.1	Genic regulation of development	190
9.2	Gene expression during development	190
9.3	Induced changes in genes governing development	197
9.4	Growth substances and the control of gene expression	197
9.5	Summary	199
	Further reading	200
	Notes	200

CONTENTS

PART V	COMPETENCE AND DETERMINATION	201
10	<i>Competence and determination in differentiation</i>	203
10.1	Commitment	203
10.2	Is there such a thing as an undetermined cell?	206
10.3	Determination in callus and at the cellular level	208
10.4	Competence and determination in xylem cell differentiation	220
10.5	Competence and determination in bud initiation	220
10.6	Competence and determination in antheridium initiation in fern prothalli	221
10.7	Competence and determination in shoots and roots	224
10.8	Competence and determination in leaf development	225
10.9	The nature of determination	227
10.10	Summary	228
	Further reading	230
	Notes	230
11	<i>Competence and determination in flowering</i>	232
11.1	The transition to flowering	232
11.2	Commitment to flower in plants with juvenile phases – tobacco and blackcurrant	236
11.3	Effects of growth substances on determination in the grapevine	240
11.4	Determination in the flower	241
11.5	Determination in the flower as revealed by reversion	242
11.6	Determination in abnormal flower development	244
11.7	Flowering as changes in competence and determination	246
11.8	Summary	247
	Further reading	249
	Notes	249
PART VI	COORDINATION OF DEVELOPMENT	251
12	<i>Pattern formation, positional information, and integration of growth</i>	253
12.1	Spacing patterns of organs: phyllotaxis, lateral roots, branching	253
12.2	Patterns of tissues – blocking out of tissue patterns in meristems; why do some cells differentiate and not their neighbours?	261
12.3	Patterns of cells	264
12.4	Regeneration of pattern – positional information	268

CONTENTS

12.5	Formation of pattern <i>de novo</i> and its physicochemical basis	273
12.6	Pattern formation within algal cells	275
12.7	Cell-cell communication	279
12.8	Integration of development: plants as fail-safe systems	280
12.9	Summary	282
	Further reading	284
	Notes	284
	<i>Glossary</i>	286
	<i>References</i>	296
	<i>Index</i>	310
