# Contents

## Introduction

D.A. DAY and R. DOUCE (With 1 Figure)	1
---------------------------------------	---

## 1 Preparation of Plant Mitochondria, Criteria for Assessment of Mitochondrial Integrity and Purity, Survival in Vitro

M. NEUBURGER (With 8 Figures)

1 Introduction	7
2 General Considerations for the Isolation of Intact Mitochondria	7
3 Large-Scale Preparation of Washed Mitochondria	9
3.1 Reagents	9
3.2 Procedure for Potato Tuber Mitochondria	10
4 Assessment of Mitochondrial Integrity	10
4.1 Spectrophotometric Assay for Succinate: Cytochrome c Oxidoreductase	10
4.2 KCN-Sensitive-Ascorbate-Cytochrome c-Dependent O <sub>2</sub> Uptake	11
5 Control of Mitochondrial Purity	12
6 Purification of Plant Mitochondria	13
6.1 Purification on Sucrose Gradients	13
6.2 Purification on Percoll Gradients	14
6.2.1 Purification of Mitochondria from Potato Tubers	15
6.2.2 Purification of Mitochondria from Pea Leaves	16
6.2.3 Properties of Percoll-Purified Mitochondria	19
7 Concluding Remarks	21
References	22

## 2 Molecular Organization and Expression of the Mitochondrial Genome of Higher Plants

F. QUETIER, B. LEJEUNE, S. DELORME, and D. FALCONET (With 3 Figures)

1 Introduction	25
2 Physicochemical Characterization	26
2.1 Buoyant Density and Melting Point	26
2.2 Direct Observation of mtDNA Molecules by Electron Microscopy	26
2.3 C <sub>0</sub> t Curves and Kinetic Complexity	27
2.4 Detection of Discrete Circular mtDNA Molecules by Gel Electrophoresis	27
3 Restriction Analysis and Molecular Cloning	28
3.1 Restriction Patterns	28
3.2 Molecular Cloning	29
3.3 Physical Map(s) of mtDNA	29
4 Identified Mitochondrial Genes	32
4.1 rRNA Genes	32
4.2 tRNA Genes	33
4.3 Protein Genes	33
5 Concluding Remarks	33
References	34

**3 Plant Mitochondrial Lipids: Structure, Function and Biosynthesis**

J.L. HARWOOD (With 9 Figures)

1	Introduction to Lipid Structures	37
2	Composition of Mitochondrial Membranes	39
2.1	Content of Acyl and Other Lipids	39
2.2	Comparison with Other Plant Membranes	43
3	Metabolism	45
3.1	Sources of Precursors for Lipid Synthesis	45
3.2	Mitochondrial Phospholipid Synthesis	47
3.3	Degradative Enzymes	53
4	Functional Aspects of Lipids	56
4.1	Membrane Structure and Function	56
4.2	Changes in Mitochondrial Lipids	60
5	Conclusion	64
	References	64

**4 Plant Mitochondrial Cytochromes**

G. DUCET (With 2 Figures)

1	Introduction	72
2	Cytochrome Estimation	74
3	Mitochondrial Cytochromes in Higher Plants	77
3.1	The c Cytochromes	77
3.1.1	Cytochrome c	77
3.1.2	Cytochrome c <sub>1</sub>	78
3.2	The b Cytochromes	79
3.2.1	The Various Cytochromes b	79
3.2.2	The Cytochrome b-c <sub>1</sub> Complex	85
3.2.3	Cytochromes b of the External Mitochondrial Membrane	86
3.3	The a Cytochromes	86
4	Influence of the Membrane Potential on the Redox States of the Mitochondrial Cytochromes	93
5	Miscellany	96
6	Cytochromes in the Respiratory Chain of Higher Plant Mitochondria	96
	References	97

**5 The Outer Membrane of Plant Mitochondria**

C.A. MANNELLA (With 10 Figures)

1	Perspective	106
2	Isolation of Mitochondrial Membranes	107
3	Lipid Composition of the Mitochondrial Outer Membrane	109
3.1	Lipid Classes	110
3.2	Fatty Acid Composition: Temperature Modulation	111
3.3	Lipid Phase Transitions	112
4	Enzymes of the Mitochondrial Outer Membrane	114
4.1	The NADH: Cytochrome c Oxidoreductase System	114
4.1.1	Possible Functions of the Outer Membrane Redox Chain	116
5	Channel-Formers of the Outer Mitochondrial Membrane	118
5.1	Structural Evidence for the Existence of Pores	118
5.2	Trypsin-Insensitive Polypeptides of the Plant Membrane	120
5.3	The Pore-Forming Polypeptides	120
5.4	Structure and Function of the Channels	123
5.4.1	Model from X-ray Diffraction	123
5.4.2	Structure from Electron Microscopy	125
5.4.3	Mechanism of Ion Selectivity	125
5.5	Speculation on a Regulatory Role for Outer Membrane Channels	126
	References	128

## 6 Organization of the Respiratory Chain and Oxidative Phosphorylation

A.L. MOORE and P.R. RICH (With 7 Figures)

1	Introduction	134
2	Organization of Respiratory Components	135
2.1	The Basic Functional Units	135
2.1.1	Complex I, NADH Dehydrogenase	136
2.1.2	Complex II, Succinate Dehydrogenase	137
2.1.3	Complex III, the Cytochrome $bc_1$ Complex	138
2.1.4	Complex IV, Cytochrome Oxidase	141
2.1.5	The Alternative Oxidase	142
2.1.6	The External NADH Dehydrogenase	143
3	Connection Between the Functional Units	144
3.1	The Sidedness of the Reactions of the Alternative Oxidase, Succinate Dehydrogenase and the External NADH Dehydrogenase	144
3.2	The Role of Ubiquinone as a Mobile Redox "Pool"	145
3.2.1	Mobility Between Components	145
3.2.2	The Role of Ubiquinone in Providing Mobility	146
3.2.3	The Relation of the Quinone Pool to Control of Electron Flow Through the Cytochrome and Alternative Oxidases	147
3.3	Some Instances Where Ideal Q-Pool Behaviour Is Not Observed	148
4	Oxidative Phosphorylation	150
4.1	Background	150
4.2	Proton Electrochemical Gradient	151
4.2.1	Steady-State Ion Distribution	151
4.2.2	Spectroscopic Probes	153
4.2.3	Ion-Specific Electrodes	154
4.2.4	Magnitude of $\Delta p$ and its Response to the Metabolic State	155
4.3	Mechanism for Generating $\Delta p$	155
4.3.1	$H^+/O$ Ratios	155
4.3.2	$H^+$ /Site Ratios	158
4.3.3	$H^+$ /ATP Ratios	159
4.4	Thermodynamic Competence of $\Delta p$	160
4.5	Is $\Delta p$ an Obligate Intermediate?	162
	References	163

## 7 The Oxidation of NADH by Plant Mitochondria

J.M. PALMER and J.A. WARD

1	Introduction	173
2	NADH Dehydrogenases Oxidizing Exogenous NADH	180
2.1	The Outer Membrane NADH Dehydrogenase	180
2.2	The Inner Membrane NADH Dehydrogenase	182
2.2.1	Location of the Dehydrogenase	182
2.2.2	Nature of the Redox Components and Relationship with the Respiratory Chain	183
2.2.3	Inhibitors of the External Dehydrogenase	185
2.2.4	Specificity of the External NADH Dehydrogenase for the Nicotinamide Adenine Dinucleotide	186
2.2.5	Regulation of Electron Flux Through the External NADH Dehydrogenase	188
2.2.6	The Physiological Significance of Regulation of the NADH Dehydrogenase	190
3	NADH Dehydrogenases Oxidizing Endogenous NADH	190
3.1	Rotenone-Sensitive Oxidation of Endogenous NADH	191
3.1.1	Redox Components Associated with the Dehydrogenase	191
3.1.2	Regulation of Electron Flow Through the Rotenone-Sensitive Dehydrogenase	192

3.2	Rotenone-Resistant Oxidation of Endogenous NADH	193
3.2.1	Relationship to the Terminal Oxidases	194
3.2.2	Relationship to the NAD <sup>+</sup> -Linked Krebs Cycle Dehydrogenases	195
	References	196
<b>8</b>	<b>The Cyanide-Resistant Pathway of Plant Mitochondria</b>	
	C. LANCE, M. CHAUVEAU, and P. DIZENGREMEL (With 10 Figures)	
1	Introduction	202
2	The Measure of Cyanide Resistance	203
3	The Dependence on Respiratory Substrates	205
4	The Inhibition of Electron Transport	207
4.1	Inhibitors of the Flavoprotein Pathway	208
4.2	Inhibitors of the Cytochrome Pathway	209
4.3	Inhibitors of the Alternative Pathway	210
4.4	Interactions Between Inhibitors	211
5	The Link with Energy Transduction	213
5.1	Oxidative Phosphorylation	214
5.2	Membrane Potential and Proton Gradient	215
6	The Structure of the Alternative Pathway	216
6.1	Branch Point of the Alternative Pathway	216
6.2	Other Components	217
7	The Functional Organization of the Alternative Pathway	217
7.1	Topographical Organization	218
7.2	Compartmentation	219
7.2.1	Ubiquinone	219
7.2.2	Pyridine Nucleotides	221
7.3	Organization of the Alternative Pathway	222
8	The Alternative Pathway Oxidase	224
8.1	Flavoprotein Hypothesis	224
8.2	Excess Oxidase Hypothesis	224
8.3	Cytochrome b <sub>7</sub> Hypothesis	225
8.4	Nonheme Iron Protein Hypothesis	226
8.5	Ubiquinone (Q-Cycle) Hypothesis	227
8.6	Quinol Oxidase Hypothesis	228
8.7	Lipoxygenase Hypothesis	228
8.8	Free Radical Hypothesis	228
8.9	Conclusions	230
9	The Distribution of Electrons Between the Two Pathways	230
9.1	Some Definitions and Remarks	231
9.2	Distribution of Electrons Between Pathways	232
9.2.1	Bahr and Bonner's Method	232
9.2.2	De Troostembergh and Nyns's Method	235
9.2.3	ADP/O Ratio Method	235
9.3	Mechanism of Electron Distribution	236
10	The Biogenesis of the Alternative Pathway	236
11	The Significance of the Alternative Pathway	237
12	Conclusion	238

## 10 The Tricarboxylic Acid Cycle in Plant Mitochondria: Its Operation and Regulation

J.T. WISKICH and I.B. DRY (With 8 Figures)

1	Introduction	281
2	Control	282
2.1	Adenylate Energy	282
2.2	Substrate Supply	285
2.3	Enzyme Activity	288
2.3.1	Enzyme Turnover	290
2.3.2	Pyruvate Dehydrogenase	290
2.3.3	Citrate Synthase	291
2.3.4	Isocitrate Dehydrogenase	291
2.3.5	Oxoglutarate Dehydrogenase	293
2.3.6	Succinyl Coenzyme A Synthetase	293
2.3.7	Succinate Dehydrogenase	293
2.3.8	Fumarase	294
2.3.9	Malate Dehydrogenase and Malic Enzyme	294
3	Fatty Acid Oxidation	296
3.1	Glyoxysome – Mitochondria Interactions	297
4	Malate Oxidation: Malate Dehydrogenase or NAD-Malic Enzyme?	300
5	Glycine Oxidation	303

## 11 Leaf Mitochondria ( $C_3 + C_4 + CAM$ )

P. GARDESTRÖM and G.E. EDWARDS (With 3 Figures)

1	Introduction	314
2	Effects of Light on Dark Respiration	314
3	Preparation of Leaf Mitochondria	316
3.1	Introduction	316
3.2	Development of Preparation Procedures	317
3.2.1	$C_3$ Plants	317
3.2.2	CAM Plants	319
3.2.3	$C_4$ Plants	319
4	Properties of Isolated Leaf Mitochondria	320
4.1	Purity and Intactness	320
4.2	Composition	321

5	Special Functions of Leaf Mitochondria – Role in Photorespiration . . .	322
5.1	Photorespiration . . .	322
5.2	Transport of Photorespiratory Metabolites . . .	324
5.3	Glycine Decarboxylase . . .	325
5.4	Serine Hydroxymethyltransferase . . .	326
5.5	Assay Methods for Glycine Decarboxylase . . .	326
5.6	Inhibition of Glycine Metabolism . . .	327
5.7	Reoxidation of NADH . . .	327
5.8	Regulation of Glycine Oxidation . . .	328
5.9	Ammonia Refixation . . .	329
6	Special Functions of Leaf Mitochondria – Role Relative to Decarboxylations in the C <sub>4</sub> Cycle . . .	330
6.1	Introduction . . .	330
6.2	PEP-Carboxykinase Types . . .	331
6.3	NADP-Malic Enzyme Types . . .	331
6.4	NAD-Malic Enzyme Types . . .	331
6.4.1	NAD-Malic Enzyme – A Mitochondrial Enzyme . . .	331
6.4.2	Properties of NAD-Malic Enzyme . . .	332
6.4.3	Function in NAD-ME Type C <sub>4</sub> Plants . . .	333
6.4.4	Function in ME Type CAM Plants . . .	335
6.5	Transport in Mitochondria Relative to C <sub>4</sub> and CAM Photosynthesis . . .	338
6.6	Abundance and Ultrastructure of Mitochondria Relative to C <sub>4</sub> Photo- synthesis . . .	339
	References . . .	341

## 12 Starch and Sucrose Degradation

M. STITT and M. STEUP (With 5 Figures)

1	Introduction . . .	347
2	Properties of Starch and Sucrose . . .	349
2.1	Starch . . .	349
2.2	Sucrose . . .	349
3	Degradation of Starch and Sucrose . . .	350
4	Relation Between Carbohydrate Mobilization and Respiration in Various Plant Tissues . . .	354
4.1	Tissues Having a High Respiratory Carbohydrate Consumption . . .	354
4.1.1	Tissues Where Starch is Almost Completely Respired to CO <sub>2</sub> . . .	354
4.1.2	Cell Culture and Callus . . .	355
4.1.3	Root Differentiation . . .	355
4.2	Tissues Where Sucrose is Metabolized but Diverted to an Increasing Extent into Storage Products . . .	356
4.2.1	Development of Lipid-Storing Seeds . . .	356
4.2.2	Starch-Storing Tubers and Seeds . . .	357
4.2.3	Storage of Sugar in Root Tubers . . .	358
4.3	Tissues in Which Starch is Being Mobilized Primarily for Conversion to Sucrose . . .	359
4.4	Photosynthetic Tissues with a Rapid Alteration Between Synthesis and Mobilization of Carbohydrate . . .	359
4.4.1	Photosynthetic Metabolism . . .	360
4.4.2	Sucrose Degradation . . .	360
4.4.3	Starch Degradation . . .	362
4.4.4	Carbohydrate Mobilization in CAM Plants . . .	364
5	General Features of the Control of Carbohydrate Respiration . . .	365
5.1	Control of Mobilization . . .	365
5.1.1	Coarse Control of Enzymes . . .	365
5.1.2	Multiple Forms of Enzymes . . .	367
5.1.3	Compartmentation of Starch . . .	368
5.1.4	Compartmentation of Sucrose . . .	369

5.1.5	Fine Control of Enzymes . . . . .	369
5.1.5.1	Starch . . . . .	370
5.1.5.2	Sucrose . . . . .	370
5.2	Control of the Utilization of Hexose P . . . . .	372
5.2.1	Coarse Control of Hexose Phosphate Metabolism . . . . .	372
5.2.2	Hexose Phosphate Metabolism and Compartmentation . . . . .	372
5.2.3	Fine Control of Hexose Phosphate Metabolism . . . . .	373
5.2.3.1	Phosphofructokinase . . . . .	373
5.2.3.2	Fructose 2,6-Bisphosphate . . . . .	375
5.2.3.3	Pyrophosphate: Fructose 6-phosphate Phosphotransferase . . . . .	377
5.2.3.4	Pyrophosphate . . . . .	378
5.2.3.5	Nonrespiratory Use of Hexose Phosphate . . . . .	379
5.2.4	A Possible Integration of Pathways . . . . .	380
References	. . . . .	380

### 13 The Organization of Glycolysis and the Oxidative Pentose Phosphate Pathway in Plants

T. AP REES (With 4 Figures)

1	Introduction . . . . .	391
2	Reactions of Glycolysis . . . . .	391
2.1	Enzymes of Glycolysis . . . . .	392
2.2	Pyrophosphate: Fructose 6-Phosphate 1-Phosphotransferase . . . . .	393
3	Reactions of the Oxidative Pentose Phosphate Pathway . . . . .	397
3.1	Enzymes of the Pathway . . . . .	397
3.2	The Nonoxidative Reactions of the Pathway . . . . .	398
4	Location and Inter-relationship of Glycolysis and the Oxidative Pentose Phosphate Pathway . . . . .	403
4.1	Carbohydrate Oxidation in the Cytosol . . . . .	403
4.2	Carbohydrate Oxidation in Plastids . . . . .	406
4.2.1	Chloroplasts . . . . .	406
4.2.2	Plastids Involved in Massive Synthesis of Fat . . . . .	410
4.2.3	Other Plastids . . . . .	411
References	. . . . .	414

### 14 Respiration in Intact Plants and Tissues: Its Regulation and Dependence on Environmental Factors, Metabolism and Invaded Organisms

H. LAMBERS (With 6 Figures)

1	Introduction . . . . .	418
2	Respiration Associated with Growth, Maintenance and Ion Uptake . . . . .	419
2.1	Is There a Justification for the Concept of Growth Respiration? . . . . .	419
