Harvey C. Hoch

*Cornell University
New York State Agricultural Experiment Station
Geneva, New York*

Plenum Press ● New York and London

Contents

I. Spore Attachment and Invasion

1. <i>Adhesion of Fungi to the Plant Surface: Prerequisite for Pathogenesis</i> ..	3
<i>Ralph L. Nicholson and Lynn Epstein</i>	
1. Introduction	3
2. Initiation of the Infection Process, the Production of Extracellular Matrices and Adhesion	4
3. Composition and Significance of Non-adhesive Compounds in the Extracellular Matrix of <i>Colletotrichum graminicola</i>	6
4. Functional Significance of Adhesion and Extracellular Matrices	9
5. Mechanisms of Fungal Adhesion to Plant Surfaces	13
6. Methodology for the Study of Extracellular Matrices and Adhesives	16
7. Conclusions	18
8. References	19
2. <i>Signaling for Infection Structure Formation in Fungi</i>	25
<i>H. C. Hoch and R. C. Staples</i>	
1. Introduction	25
2. Signaling for Growth Orientation	29
3. Signals for Infection Structure Formation	33
4. Differentiation Proteins—A Consequence of Signal Reception	39
5. Conclusion	41
6. References	42
3. <i>The Plant Cell Wall as a Barrier to Fungal Invasion</i>	47
<i>M. G. Smart</i>	
1. Introduction	47
2. Structure of the Plant Cell Wall	48
3. Resistance of Native Cell Walls to Fungi	51

4. Modification of Cell Walls in Resistance to Fungi	53
5. Cooperative Resistance	58
6. Concluding Remarks	60
7. References	61
4. <i>Rust Basidiospore Germlings and Disease Initiation</i>	67
<i>Randall E. Gold and Kurt Mendgen</i>	
1. Introduction	67
2. Basidiospore Morphology and Germination	68
3. Basidiospore Germlings <i>in Vitro</i>	74
4. Basidiospore Germlings <i>in Vivo</i>	78
5. Conclusions	87
6. References	95
5. <i>Attachment of Mycopathogens to Cuticle: The Initial Event of Mycoses in Arthropod Hosts</i>	101
<i>Drion G. Boucias and Jacquelyn C. Pendland</i>	
1. Introduction	101
2. Structural Studies of the Outer Wall Layer of Fungal Propagules Infectious to Arthropod Hosts	103
3. Chemical Properties of the Outer Layer of Fungal Propagules Infectious to Invertebrates	109
4. Structure and Composition of the Epicuticle: The Target Substrate for Spore Adhesion	115
5. Relationship between Fungal Propagules and the Host Cuticle	118
6. Summary	123
7. References	124
6. <i>The Fate of Fungal Spores in the Insect Gut</i>	129
<i>R. J. Dillon and A. K. Charnley</i>	
1. Introduction	129
2. The Structure of the Insect Gut and the Associated Microbiota	130
3. Retention of Spores in the Gut	132
4. Influence on Spore Germination of Passage through the Gut	133
5. Conditions Imposed by the Insect and Gut Microbiota Which Influence Spore Adhesion and Germination	134
6. Gut Infections in Insects	141
7. Conclusions	149
8. References	150
7. <i>Candida Blastospore Adhesion, Association, and Invasion of the Gastrointestinal Tract of Vertebrates</i>	157
<i>Michael J. Kennedy</i>	
1. Introduction	157

2. Sequential Steps in Mucosal Association and Invasion	158
3. Physicochemical Aspects of Mucosal Association	159
4. Mechanisms of Adhesion and Association with Gastrointestinal Mucosa	161
5. Mechanisms of Mucosal Invasion	167
6. <i>Candida</i> Cell Surface Composition, Ultrastructure, and Possible Adhesins	171
7. Factors Influencing Adhesion, Invasion, and Colonization	174
8. References	177
8. <i>Infectious Propagules of Dermatophytes</i>	181
<i>Tadayo Hashimoto</i>	
1. Introduction	181
2. Infective Conidia Produced by the Dermatophytes	183
3. Formation of Conidia	185
4. Biological Characteristics	193
5. Infectivity and Pathogenicity	196
6. Mechanisms of Disease Initiation in Dermatophytosis	198
7. References	200
II. Fungal Spore Products and Pathogenesis	
9. <i>Melanin Biosynthesis: Prerequisite for Successful Invasion of the Plant Host by Appressoria of Colletotrichum and Pyricularia</i>	205
<i>Yasuyuki Kubo and Iwao Furusawa</i>	
1. Introduction	205
2. Mode of Appressorial Penetration	206
3. Penetration Ability of Melanin-Deficient Mutants	206
4. Location and Form of Melanin	208
5. Action Mechanism of Melanin-Inhibiting Fungicides	209
6. Regulation of Melanin Biosynthesis during Appressorium Formation	215
7. Conclusion	215
8. References	215
10. <i>The Plant Cuticle: A Barrier to Be Overcome by Fungal Plant Pathogens</i>	219
<i>Wolfram Köller</i>	
1. Introduction	219
2. The Plant Cuticle	220
3. Cutinase from Fungal Pathogens	222
4. Cutinase as a Factor in Pathogenicity	227
5. Modes of Penetration and Involvement of Cutinase	231
6. Cutinase as a Target for Plant Disease Control	237
7. Ecology of Cutinase	239
8. References	240

11. <i>Appearance of Pathogen-Related Proteins in Plant Hosts: Relationships between Compatible and Incompatible Interactions</i>	247
<i>Ingrid M. J. Scholtens-Toma, Matthieu H. A. J. Joosten, and Pierre J. G. M. De Wit</i>	
1. Plant-Pathogen Interactions	247
2. The Compatible Interaction	252
3. The Incompatible Interaction	256
4. Concluding Remarks	261
5. References	261
12. <i>The Role of Cuticle-Degrading Enzymes in Fungal Pathogenesis in Insects</i>	267
<i>A. K. Charnley and R. J. St. Leger</i>	
1. Introduction	267
2. The Invasion Process	268
3. Cuticle as a Barrier to Fungal Infection	269
4. Cuticle-Degrading Enzymes	271
5. Proteolytic Enzymes	273
6. Chitinolytic Enzymes	278
7. Lipolytic and Esterolytic Enzymes	279
8. Host Defense against Cuticle-Degrading Enzymes	281
9. Cuticle-Degrading Enzymes as Virulence Determinants	282
10. References	283
13. <i>Potential for Penetration of Passive Barriers to Fungal Invasion in Humans</i>	287
<i>Frank C. Odds</i>	
1. Fungi with Potential for Penetration of Epithelial Surfaces	287
2. Proteolysis (and Keratinolysis) as a Mechanism for Epithelial Penetration	288
3. Other Hydrolytic Enzymes as Agents for Epithelial Penetration	292
4. Conclusions	292
5. References	292
14. <i>Dihydroxynaphthalene (DHN) Melanin and Its Relationship with Virulence in the Early Stages of Phaeohyphomycosis</i>	297
<i>Dennis M. Dixon, Paul J. Szaniszlo, and Annemarie Polak</i>	
1. Introduction	297
2. Virulence of the Dematiaceous Fungi	298
3. DHN Melanin and <i>Wangiella dermatitidis</i>	300
4. Initial Studies of Virulence	306
5. Studies of <i>mel3</i> in Additional Mouse Strains	308
6. Studies with Additional Mutants in Outbred Mice	313
7. Preliminary Studies with Broth-Cultivated Inoculum	314
8. References	317

III. Host Response to Early Fungal Invasion

15. <i>Invasion of Plants by Powdery Mildew Fungi, and Cellular Mechanisms of Resistance</i>	321
<i>James R. Aist and William R. Bushnell</i>	
1. Introduction	321
2. Primary Germ Tubes	324
3. Cytoplasmic Aggregation	325
4. Halo Formation	326
5. Papilla Formation	327
6. Haustoria	330
7. Hypersensitive Response	333
8. Levels of Specificity	335
9. Concluding Statement	339
10. References	339
16. <i>Induced Systemic Resistance in Plants</i>	347
<i>Nageswara Rao Madamanchi and Joseph Kuć</i>	
1. Introduction	347
2. The Phenomenon	348
3. Mechanisms Activated	350
4. Gene Expression as it Relates to Induced Systemic Resistance—Applications of Molecular Biology	355
5. Concepts and Applications for the Future	356
6. References	357
17. <i>The Plant Membrane and Its Response to Disease</i>	363
<i>Anton Novacky</i>	
1. Introduction	363
2. Membrane Structure and Function	364
3. Interaction with the Plasma Membrane H ⁺ -ATPase	364
4. Interaction with a Single Ion Channel	367
5. The Plasma Membrane as a Possible Toxin Target	368
6. Recognition of an Incompatible Pathogen	372
7. Conclusion	374
8. References	375
18. <i>The Fungal Spore: Reservoir of Allergens</i>	379
<i>J. P. Latgé and S. Paris</i>	
1. Introduction	379
2. Methodology Available to Study Fungal Spore Allergy	380
3. Characterization of Spore Allergens	388
4. Other Fungi	396
5. Perspectives for Future Research	397
6. References	398

19. <i>Conidia of Coccidioides immitis: Their Significance in Disease Initiation</i>	403
<i>Garry T. Cole and Theo N. Kirkland</i>	
1. Introduction	403
2. Saprobic and Parasitic Cycles of <i>Coccidioides immitis</i>	404
3. Techniques of Isolation and Characterization of Conidial Wall Fractions	408
4. Outer and Inner Conidial Wall Fractions	416
5. Water-Soluble Conidial Wall Fraction	428
6. Possible Biological Functions of Isolated Conidial Wall Components	435
7. Summary	438
8. References	439
20. <i>Cell-Mediated Host Response to Fungal Aggression</i>	445
<i>Alayn R. Waldorf</i>	
1. Introduction	445
2. Fungicidal Mechanisms	446
3. Role of the Mononuclear Phagocyte	447
4. Role of the Polymorphonuclear Leukocyte	452
5. Conclusion	456
6. References	456
21. <i>Suppression of Phagocytic Cell Responses by Conidia and Conidial Products of Aspergillus fumigatus</i>	461
<i>Maura D. Robertson</i>	
1. Introduction	461
2. Pathogenicity of <i>A. fumigatus</i>	462
3. <i>Aspergillus fumigatus</i> in the Lung	462
4. Phagocytic Cells versus <i>Aspergillus fumigatus</i>	463
5. Effect of Conidial Products on Phagocytic Cell Function	473
6. Summary	476
7. References	477
IV. Molecular Aspects of Disease Initiation	
22. <i>Molecular Approaches to the Analysis of Pathogenicity Genes from Fungi Causing Plant Disease</i>	483
<i>Robert C. Garber</i>	
1. Introduction	483
2. Technology for Isolation of Fungal Genes	484
3. Isolation of Pathogenicity Genes with Known Products	491
4. Isolation of Pathogenicity Genes with Unknown Products but Genetically Established Roles in Disease	495
5. Prospects for Progress	497
6. References	498

23. *Current Status of the Molecular Basis of Candida Pathogenicity* 503
David R. Soll

1. Introduction 503
2. The Basic Biology of *Candida* Dimorphism 503
3. The Basic Biology of High-Frequency Switching in *C. albicans* 507
4. Basic Biological Characteristics Other Than Dimorphism and Switching Which
 May Play Roles in Pathogenesis 514
5. The Molecular Genetics of *C. albicans* 514
6. The Molecular Biology of Dimorphism 517
7. The Molecular Biology of Switching 519
8. Applying Molecular Technologies to the Basic Questions of *Candida*
 Epidemiology and Disease 521
9. Concluding Remarks 534
10. References 535
