Introduction 1

1. Lectins and their specificity 3

D-mannose/D-glucose-specific lectins 4
N-acetyl-D-glucosamine-binding lectins 9
N-acetyl-D-galactosamine/D-galactose-binding lectins 14
Ricinus communis lectins 15
Soyabean (*Glycine max)* agglutinin 20
Phaseolus vulgaris lectins (PHA) 24
L-fucose-binding lectins 30

2. Structure of lectins 32

Primary sequences 32
Metal binding sites 35
Hydrophobic sites 36
Glycosylation sites 37
Carbohydrate-binding sites 37
Three-dimensional structure 37
Conclusions 38

3. Localization and biosynthesis in plants 39

Localization in the plant and cellular location 39
Seeds 39
Vegetative parts 43
Biosynthesis of plant lectins 50

4. Biological functions in plants 57

Interactions with endogenous receptors 57
Interactions with exogenous receptors 59

Defence against microorganisms and potential predators 60
Legume–*Rhizobium* symbiosis 64
Miscellaneous functions 70

5. Effects on blood cells 74

Agglutination 74
Mitogenic stimulation of lymphocytes 78
Immunosuppression 95
Lectin-dependent blood cell cytotoxicity and phagocytosis 101
Lectin-induced mast cell reactions 102

6. General effects on animal cells 105

Insulin-mimicking effects on adipocytes and other cells 105
Effects of lectins on cells of the digestive tract 107
Lectins in foods 108
The nutritional toxicity of PHA 111
Effects of PHA on the digestive tract *in vivo* 113
Effects of other lectins on cells of the small intestine 159
Transport of lectins through the membranes of the adult gut – a potential system for the oral delivery of drugs 179
Interactions with nerve cells and transneural transport of lectins 183
Miscellaneous interactions of lectins with cells and their underlying structural elements 190
Cytotoxins – magic bullets – immunotoxins 199
