POWDER TECHNOLOGY AND PHARMACEUTICAL PROCESSES

Edited by

DOMINIQUE CHULIA

Laboratoire de Pharmacie Galénique, UFR de Pharmacie, Limoges, France

MICHEL DELEUIL

Rhône-Poulenc Rorer, Antony, France

YVETTE POURCELOT

Laboratoire de Pharmacie Galénique, UFR de Pharmacie, Dijon, France

ELSEVIER

Amsterdam – London – New York – Tokyo 1994

CONTENTS

Preface	VII
Acknowledgments	XI
Contributors	XIII
Introduction to part 1	
BACKGROUND TO PHARMACEUTICAL ENGINEERING	1
Chapter 1	
SAMPLING	
M. Deleuil	
1. Introduction	3
2. Basic discussion	3
2.1. Sampling stages	5
2.2. Bernouilli's law	5
2.3. The distribution function by weight	7
2.3.1. Minimum error	8
2.3.2. The problem of units - some numerical examples	10
2.3.3. Particle analysis	12
2.4. Conclusion on the basic approach	13
3. Sampling practice	14
3.1. Collection of M_p	14
3.1.1. Static sampling	15
3.1.2. Dynamic sampling	16
3.2. Processing of M_p to obtain M_a	18
3.2.1. Splitting devices to reduce the size of M_p	19
3.2.2. Dividing devices	19
3.2.3. Sampling in less than 100 mg of powder	20
3.2.4. Other operations	22
4. General discussion	22
5. Further aspects on the statistical distribution of particles	23
6. References	25
Chapter 2	
PHYSICO-CHEMICAL TRANSFORMATIONS OF POWDERS	
M. Soustelle	
1. Thermodynamic study of transformations	27
1.1. Thermal change of solids	28
1.1.1. Phenomena accompanied by changes in local or global composition without creation of new phases, and without textural modification	28
1.1.2. Phenomena accompanied only by textural modifications	30
1.1.3. Phenomena resulting in the creation of new phases	32

1.2. Thermodynamic of solid-gas systems	34
1.2.1. Thermodynamic classification of solid-gas transformations	35
1.2.2. Thermodynamic approach to the phenomena	36
1.2.3. Equilibrium laws and solution models	40
1.2.4. Changes equilibrium conditions with particle size	43
1.2.5. Serial transformations, juxtaposition of ranges of stability	44
1.3. Thermodynamics of solid-liquid equilibria	47
1.3.1. Dissolution of a solid with dissociation	47
1.3.2. Dissolution of a solid without dissociation	47
1.3.3. Influence of temperature on solubility	48
1.3.4. Influence of particle size on solubility	48
2. Adsorption of gases on solids	48
2.1. Definition, physical adsorption and chemisorption	48
2.2. Thermodynamics aspects of adsorption, shapes of the isotherms	48
2.3. The B.E.T. theory and the measurement of specific area	49
2.4. The adsorption-desorption cycle, hysteresis, measurement of the porosity of solids	51
2.5. Chemisorption isotherms, Langmuir's theory	53
3. Kinetics of transformations	54
3.1. Specific rates and absolute rates	54
3.2. Rate of dissolution in a liquid	54
3.3. Thermal decomposition rate of a powder	56
3.4. Chemisorption rate	57
4. References	58

Chapter 3

STRUCTURE AND TEXTURE OF SOLIDS

G. Thomas

1. Crystal structure	59
1.1. Crystallographic geometry	59
1.2. Cohesion in the crystal structures	60
1.3. Polymorphism	62
2. Determination of crystal structures	62
3. Structure and physico-chemical properties of the real solid	64
3.1. Imperfections	64
3.1.1. Isolated defects	64
3.1.2. Defects with one, two or three dimensions	65
3.2. Structure-property relationships	65
3.3. The concept of granules	66
4. From granules to powder	66
4.1. From the aggregate to the agglomerate	66
4.2. Texture	67
5. Summary: from the monocrystal to the bulk	68
6. Determination of textures	68
6.1. Physico-chemical methods	68
6.1.1. Specific area and porosimetry by adsorption	68
6.1.2. Mercury intrusion porosimetry	69
6.2. Physical methods	70
6.2.1. Laser granulometry	70
6.2.2. Sedimentometry	70
6.2.3. Laser diffusion	71
6.2.4. Image analysis	71
7. Texture control testing	73

8. Textures and physico-chemical properties of the real solid	73
8.1. Properties related to the surface area	74
8.1.1. Permeability of a porous bed	74
8.1.2. Reactivity of a solid	75
8.2. Properties linked to the surface state: wettability	75
8.3. Properties due to the surface extent and state: compressibility	77
9. Conclusion	78
10. References	78

Chapter 4

SURFACE-ACTIVITY OF WATER

J. Yvon, F. Thomas, F. Villieras, L.J. Michot

1. Surface heterogeneity and adsorption mechanisms	79
2. Hydration of mineral surfaces	79
2.1. The reference state: the “dry” solid	80
2.2. Hydration at low relative pressures	80
2.2.1. Experimental techniques and data treatment	80
2.2.2. Example of analysis in the case of a swelling solid	86
2.3. Hydration of pastes	90
2.3.1. Experimental techniques	90
2.3.2. Determining parameters: salinity, rigidity, humidification-drying cycles	98
2.4. Swelling scales	99
3. Surface charge	99
3.1. Origin	99
3.2. The electrical double layer	99
3.3. Chemical model of surface complexation	100
3.4. Experimental determination of the components of the surface charge	102
3.4.1. Potentiometric titration	102
3.4.2. Analysis of the adsorbed counterions	102
3.4.3. Electrokinetic methods	102
3.5. Determination of equilibrium constants	103
3.5.1. Graphic extrapolation	103
3.5.2. Simulation	104
3.6. Validity of the surface complexation models	104
3.7. Exchange capacity	104
4. Wettability, hydrophilicity-hydrophobicity	105
4.1. Definition	105
4.2. Case of powdered solids. Relative estimations, comparisons	107
5. References	108

Chapter 5

PARTICLE AND POWDER DYNAMICS

M. Deleuil, D. Chulia, Y. Pourcelot

1. Introduction: choosing the right technology	115
2. Particle characteristics and particle dynamics	117
2.1. Usefulness of size and shape analysis	117
2.2. Electrostatic phenomena	121
2.2.1. Background	121
2.2.2. Consequences of electrostatic charges	125

2.2.3. Guidelines for the prevention of static electrification	125
2.3. Particle dynamics	127
2.3.1. Particle hydrodynamics	127
2.3.2. Problems in bulk manufacturing processes	133
3. Powder dynamics and bulk testing	137
3.1. Flow	140
3.1.1. Ideal free-flowing bulk	140
3.1.2. Cohesive powders	140
3.1.3. Wall friction and caking	142
3.1.4. Flow and flow measurements	144
3.1.5. The nature of the forces involved in cohesion and aggregation	146
3.1.6. Flow reliability	151
3.2. Hardening	152
3.2.1. Bulk densification	154
3.2.2. Hardening	158
4. References	160

Chapter 6
MOTION, HEAT AND MASS TRANSFERS
C. Laguérie

1. Introduction	165
2. Motion of particles in a fluid	165
2.1. Flow past a cylinder and a sphere	165
2.2. Drag coefficients for a spherical particle	168
2.3. Terminal falling velocities of spherical particles	172
3. Pressure drop of a fluid through a packed bed of spherical particles	174
4. Fluidization of particles	174
4.1. The phenomenon of fluidization	174
4.2. Minimum fluidizing velocity	175
4.3. Entrainment velocity of the particles in particulate fluidization	177
5. Heat transfer about solid particles	178
5.1. Heat conduction from a sphere to a stagnant fluid	178
5.2. Forced convection around a single sphere	179
5.3. Forced convection through packed beds	182
5.4. Fluid-to-particle heat transfer in a fluidized bed	183
6. Mass transfer around solid particles	184
7. References	187
8. Notations	189

Introduction to part 2
POWDERS AND MULTIPHASE PRODUCT PROCESSES

191

Chapter 7
CRYSTALLIZATION
R. David and D. Giron

1. Introduction	193
2. Definitions	194
2.1. Solute-solvent system	194
2.2. Fractional crystallization	195
2.3. Supersaturation	195
3. Polymorphism and pseudo-polymorphism	196
3.1. Importance of controlling polymorphism (some examples)	196
3.2. Thermodynamic and kinetic aspects of polymorphism	199
3.3. How to solve polymorphism problems?	206
4. Elementary processes of crystallization	206
4.1. Nucleation	207
4.1.1. Primary nucleation	207
4.1.2. Metastability	208
4.1.3. Secondary nucleation	209
4.2. Crystal growth	210
4.2.1. Integration rate in the crystal lattice	210
4.2.2. External diffusion flux	211
4.2.3. Global deposition flux	212
4.2.4. Global deposition flux from ionic solutions	212
4.3. Ripening	213
4.4. Agglomeration	214
4.5. Breakage	214
5. Crystal engineering	215
5.1. Crystal morphology and crystal habit	215
5.2. Solvent, impurities, additives	215
6. Modeling of simple crystallizers	217
6.1. Mass and energy balances of a crystallizer	217
6.2. Population balance of crystals	219
6.3. Simple stirred crystallizers	221
6.3.1. Cooling batch crystallizers	221
6.3.2. Evaporation batch crystallizers	223
6.3.3. Mixed solvent mixed product removal (MSMPR) continuous crystallizer	223
6.3.4. Deviations of the MSMPR crystallizer	226
7. Other industrial crystallizers	226
7.1. Multizone crystallizers	227
7.2. Fluidized beds	230
7.3. Example of controlled batch cooling crystallization	231
7.4. Some problems encountered in crystallization processes	236
8. Conclusion	236
9. References	238
10. List of symbols	240

Chapter 8**DRYING****G. Rios, A.L. Raoult-Wack, R. Bentejac and R. Joulié****1- Drying operations****G. Rios**

1. Introduction	243
2. General presentation	243
3. Classification	244
4. References	248

2- Dewatering and impregnation soaking processes (“DIS Processes”)**A.L. Raoult-Wack**

1. General presentation	249
2. Basic principles	250
3. Effect of the operating variables	252
4. Conclusion	255
5. References	255

3- Freeze-drying**R. Bentejac**

1. General aspects	257
2. The stages of freeze-drying	258
2.1. Freezing	258
2.1.1. Minimum freezing temperature	258
2.1.2. The rate of cooling	259
2.1.3. Freezing and formulation	262
2.1.4. Freezing processes	263
2.2. Sublimation	263
2.2.1. Sublimation temperature	265
2.2.2. Sublimation pressure	265
2.3. Secondary drying	266
3. Freeze-drying methods	267
3.1. Preliminary studies and formulation	267
3.2. Pilot-scale trials	267
3.3. Validation of industrial apparatus	267
3.4. Validation of the process	267
4. Pharmaceutical industry applications of freeze-drying	268
4.1. Storage of fragile compounds	268
4.2. Properties of the lyophilized solid	269
5. Conclusion	270
6. References	271

4- Fluid bed drying**R. Joulié**

1. Introduction	272
2. General design and hydrodynamic properties	272
3. Heat and mass transfer properties	276
4. Dryers	276

5. Measurements and control in bed-fluidized dryers	280
6. Advantages and limitations of fluid-beds dryers	282
7. References	283

Chapter 9

1- STORAGE, FEEDING, PROPORTIONING

D. Schulze

1. Storage of bulk solids in silos	285
1.1. Flow profiles	285
1.2. Silo stresses	286
1.3. Flow problems	286
2. Silo design for flow	288
2.1. Design of mass flow silo	288
2.2. Funnel flow silo design	293
2.3. Application of the results of silo design	294
3. Mass flow rates	297
4. Constructional aspects of technical silo design	298
4.1. Hopper geometry	298
4.2. Discharge devices, feeders	299
4.2.1. Blockage and control units	301
4.2.2. Screw conveyors	301
4.2.3. Belt feeder	302
4.2.4. Rotary valves	304
4.2.5. Vibrating hoppers	305
4.2.6. Vibrating conveyor	306
4.2.7. General review	306
4.3. Discharge aids	306
4.4. Design precautions	311
5. Proportioning of bulk solids	313
5.1. Discontinuous proportioning	313
5.2. Continuous proportioning	314
5.2.1. Volumetric proportioning	314
5.2.2. Gravimetric proportioning	314
6. References	316

2- PNEUMATIC CONVEYING

P. Hilgraf

7. Pneumatic conveying	319
7.1. General principles	319
7.2. Conveying diagram, types of flow	321
7.3. Solids influences	324
7.4. Conveying line design	330
7.5. Solid feed systems	337
7.6. Dense-phase conveying systems	344
8. References	346

Chapter 10**MIXING****J. Bridgwater**

1. The field	347
2. Factors relevant to mixer selection	348
3. Types of powder	349
4. Mixture quality	350
5. Mixing mechanisms for free-flowing systems	352
6. Physical mixing/segregation mechanisms	353
7. Use of a modern tracking method	355
8. Conclusion	356
9. References	357

Chapter 11**1- GRANULATION AND COATING****Z.D. Ormos**

1. Objectives and product forms	359
2. Mechanisms of bonding and formation	360
3. Binders and coating materials	362
4. Physical properties of products	364
5. Processes and equipment	364
5.1. Batch-operated fluidized bed and spouted bed granulators	365
5.2. Rotary (centrifugal) fluidization processes	367
5.3. Fluidization processes in continuous operation	369
5.4. Rolling bed processes	371
6. Conclusions	372
7. References	373

2- MOIST AGGLOMERATION OF PHARMACEUTICAL POWDERS (SIZE ENLARGEMENT OF PARTICULATE MATERIAL), THE PRODUCTION OF GRANULES BY MOIST AGGLOMERATION OF POWDERS IN MIXERS/KNEADERS

H. Leuenberger

1. Introduction	377
2. The dry-blending operation	378
3. Moist agglomeration process	378
3.1. The case of a low viscosity granulating liquid	380
3.1.1. Liquid bridge force and cohesive stress	381
3.1.2. Tensile strength of moist agglomeration, i.e., green granules	381
3.1.3. The power consumption profile	381
3.1.4. Interpretation of power consumption profile	384
3.1.5. Growth kinetics of the agglomerates	385
3.1.6. Scale-up and scale-down exercises / process monitoring	386
3.2. Agglomeration process with a high-viscosity binder	387
4. Conclusion	389
5. References	389

Chapter 12
EXTRUSION/SPHERONISATION
J.M. Newton

1. Introduction	391
2. Formulation of wet powder mass	392
3. Preparation of extrudate	392
4. Spheronisation	394
5. Formulation	396
6. Assessment of the quality of spheroids	399
7. References	400

Chapter 13

1- ASSESSMENT OF POWDER COMPACTION
E. Doelker

1. Introduction	403
2. Transmission of forces through a powder bed	405
3. Tests on formed compacts	408
3.1. Tests and parameters for the mechanical assessment of formed compacts	408
3.2. Tests and parameters for mechanical assessment of powders	415
3.3. Strain movements and stress relaxation	423
4. Densification behaviour	430
5. Work involved in compression	437
6. Long's compression cycle	443
7. Frictional parameters	447
8. Effect of process and formulation variables on the compression parameters	451
9. Proposed testing procedure	451
10. Conclusion	460
11. References	460

2- TABLETTING - AN INDUSTRIAL VIEW POINT
A. Lewis and G. Simpkin

1. Introduction	473
2. The raw materials	474
2.1. The active substance	474
2.2. Excipients	476
3. Process control and scale-up	478
3.1. Wet granulation	479
3.2. Granule drying	483
3.3. Screening, blending and lubrication	484
4. Compression	485
4.1. Tooling for compression machines	486
4.1.1. Concavity, bevels and lettering	486
4.1.2. Shaped punches	487
4.2. Compression scale-up	487
4.3. Tablet properties	489
5. Conclusions	491
6. References	492

Chapter 14

1- NEW PROCESSES - APPLICATION OF SPHERICAL CRYSTALLIZATION TO PARTICULATE DESIGN OF PHARMACEUTICALS FOR DIRECT TABLETTING AND COATING, AND NEW DRUG DELIVERY SYSTEMS

Y. Kawashima

1. Introduction	493
2. Solvent systems for spherical crystallization	493
3. Preparation of spherically agglomerated crystals for direct tableting or coating	498
4. Preparation of drug delivery devices (microcapsule, microsp sponge, microballoon, nanosphere)	504
4.1. Preparation of microcapsules for masking bitter taste	504
4.2. Preparation of controlled release ibuprofen microsp sponge suspension	505
4.3. Preparation of multiple unit hollow microsphere (microballoon) as a floating controlled drug delivery system in the stomach	506
4.4. Preparation of DL-lactide/glycolide copolymère nanocapsules by a novel spontaneous emulsification solvent diffusion methods	509
5. References	511

2- MICROENCAPSULATION PROCESSES FOR THE MANUFACTURE OF SYSTEMS PROVIDING MODIFIED RELEASE OF THE ACTIVE CONSTITUENT

H. Porte and G. Couarraze

1. Introduction	513
2. Formulation systems and agents	515
2.1. Diffusion systems	517
2.2. Erodible systems	519
3. Encapsulation methods	521
3.1. Physico-chemical processes	523
3.1.1. Coacervation processes	523
3.1.2. Encapsulation by emulsion-solvent evaporation	525
3.1.3. Microencapsulation by melting solidification	527
3.2. Chemical microencapsulation	529
3.2.1. Microencapsulation by interfacial polymerization	529
3.2.2. Microencapsulation by polymerization in suspension or emulsion	531
3.3. Microencapsulation by spraying	533
3.3.1. Spray-coating	533
3.3.2. Encapsulation by atomization or spray-drying	534
3.3.3. Encapsulation by prilling	535
4. Conclusions	536
4.1. Sophistication of the systems	536
4.2. Development of non-pharmaceutical modified-release forms	537
5. References	538

Chapter 15
DISSOLUTION AND POWDER TECHNOLOGY
W.A. Hanson

1. Introduction	545
2. Formulation objectives	545
3. Powder selection fundamentals	546
4. Physical differences affecting dissolution	547
4.1. Particle size and shape	548
4.2. Flowability	548
4.3. Mixing	549
4.4. Moisture and hygroscopic index	549
5. Examples of dissolution problems associated with powder specifications	550
5.1. Flowability	550
5.2. Molecular level stability	550
5.3. Moisture	550
6. Summary	551
7. References	551
TENTATIVE CONCLUSIONS	553
M. Deleuil
