Contents

Preface	V
1. Introduction	1
2. Methods of investigation	2
2.1 Light microscopy	2
2.1.1 Unstained bacterial samples	2
2.1.2 Fixation and staining procedures	2
2.1.3 Immunolabelling techniques	5
2.1.4 Imaging techniques	5
2.2 Electron microscopy	6
2.2.1 Preparation techniques	6
2.2.2 Imaging techniques	10
2.2.3 Image evaluation	12
2.2.4 Cytochemical techniques	13
2.2.5 Autoradiography	16
2.2.6 Immunolabelling techniques	16
3. The structural concept of the bacterial cell	19
4. Determination of cell shape	23
5. Cytology of the bacterial cell	30
5.1 The cytosol	30
5.2 Cell envelope	31
5.2.1 General principles	31
5.2.2 Structures and components in the wall of Gram-positive bacteria as revealed by electron microscopy	32
5.2.3 Structures and components in the wall of Gram-negative bacteria as revealed by electron microscopy	33
5.2.4 Peptidoglycan: Molecular composition, structure, and implications for taxonomy	36
5.2.5 Structural and biochemical features specific for Gram-positive walls	38
5.2.5.1 Teichoic and teichuronic acids	38
5.2.5.2 Lipids and waxes	40
5.2.5.3 Proteins	40
5.2.5.4 Polysaccharides	41
5.2.6 Structural and biochemical features specific for Gram-negative walls	42
5.2.6.1 The periplasmic space or “periplasmic gel”	42

5.2.6.2	The “intermediate layer”	44
5.2.6.3	Lipoprotein	45
5.2.6.4	The outer membrane	45
5.2.6.5	Interconnections between envelope layers	47
5.2.7	Regular surface layers present on bacterial walls	48
5.2.7.1	Ultrastructure of S-layers	48
5.2.7.2	Chemical composition of S-layer subunits	52
5.2.7.3	Functional aspects	53
5.3	Capsules, sheaths, and slime	53
5.3.1	Ultrastructural aspects	55
5.3.2	Chemical composition	58
5.3.3	Synthesis, interaction with bacteriophages	59
5.3.4	Functional aspects	59
5.4	The cytoplasmic membrane	62
5.4.1	Structure and components	62
5.4.2	Functional aspects	64
5.5	Intracytoplasmic membranes	67
5.5.1	The “mesosome”	67
5.5.2	Intracytoplasmic membrane systems in photosynthetic bacteria	69
5.5.3	Intracytoplasmic membrane systems in non-photosynthetic bacteria	82
5.6	Inclusion bodies	89
5.6.1	Membrane-enclosed inclusion bodies	89
5.6.1.1	Chlorosomes	89
5.6.1.2	Carboxysomes	93
5.6.1.3	Gas vacuoles	96
5.6.1.4	Magnetosomes	97
5.6.1.5	Poly- β -hydroxybutyrate (PHB) granules	99
5.6.1.6	Sulfur globules	100
5.6.1.7	Membrane-enclosed polyglucoside (glycogen) granules	101
5.6.2	Inclusion bodies without a membrane	103
5.6.2.1	Polyglucoside (glycogen) granules	103
5.6.2.2	Polyphosphate (volutin, metachromatic) granules	103
5.6.2.3	Crystals and paracrystalline arrays	104
5.6.2.4	Cyanophycin (structured) granules	106
5.6.2.5	Phycobilisomes	106
5.6.3	Intact and defective bacteriophages in bacteria	111
5.6.4	Intracellular refractile structures (R-bodies)	113
5.7	The bacterial ribosome	116
5.8	The organization of the bacterial nucleoid	122
5.9	Non-flagellar bacterial appendages	131
5.9.1	Pili and fimbriae	131
5.9.1.1	Pili	131
5.9.1.2	Fimbriae	135
5.9.2	Bacterial spinae	139
5.10	Structural and functional aspects of bacterial motility	141
5.10.1	Bacterial motility mediated by flagella	141

5.10.1.1 Structural aspects	141
5.10.1.2 Functional aspects	156
5.10.2 Motility of spirochetes and structurally related bacteria	159
5.10.3 Gliding, and other types of active bacterial locomotion	161
5.11 Bacterial endospores, exospores, cysts, myxospores, and other persistent states	166
5.12 Bacteria lacking peptidoglycan in their walls	175
5.12.1 Wall-deficient bacteria	175
5.12.2 Bacteria with cell envelopes lacking peptidoglycan	176
5.12.2.1 Eubacteria	177
5.12.2.2 Archaeobacteria	177
6. Cell growth	186
7. General cytological aspects of cell division modes	195
8. Interrelationships between cell growth and division	200
8.1 Special aspects in Gram-positive bacteria	201
8.2 Special aspects in Gram-negative bacteria	207
9. Homologous and heterologous associations involving bacteria	212
9.1 Homologous associations	212
9.2 Heterologous associations (symbiotic bacteria, parasites)	220
