TERTIARY LEVEL BIOLOGY

# The Lichen-Forming Fungi

DAVID L. HAWKSWORTH, Ph.D., D.Sc., F.L.S., F.I. Biol.  
Director  
Commonwealth Mycological Institute  
Kew

DAVID J. HILL, D.Phil.  
Tutor in Biology  
Department of Extra-Mural Studies  
University of Bristol

G<sup>11</sup>

**Blackie**

Glasgow and London

Distributed in the USA by  
Chapman and Hall  
New York

# Contents

Chapter 1. THE LICHEN HABIT	1
1.1 History	1
1.2 Defining 'lichen'	2
1.3 Fungus-alga associations	3
1.4 Three- and four-membered symbioses	5
1.5 Mycobionts in lichens	8
1.6 Photobionts in lichens	12
1.7 Taxonomic concepts	14
Chapter 2. THALLUS STRUCTURE	16
2.1 Morphology	16
2.2 Environmental modifications	22
2.3 Tissue types	23
2.4 Attachment organs	24
2.5 Cyphellae and pseudocyphellae	24
2.6 Cephalodia and the role of the bionts in morphogenesis	26
2.7 Culture and synthesis	27
Chapter 3. REPRODUCTION	29
3.1 Ascomata	29
3.2 Ontogeny	32
3.3 Hamathecium	33
3.4 Asci	34
3.5 Ascospores	36
3.6 Conidiomata	38
3.7 Vegetative propagules	40
3.8 Evolutionary trends in reproductive strategies.	43
Chapter 4. DISPERSAL, ESTABLISHMENT AND GROWTH	45
4.1 Ascospore discharge and dispersal	45
4.2 Ascospore germination	46
4.3 Photobiont reproduction and dispersal	46
4.4 Photobiont recognition and selection	46

4.5	Asexual propagule dispersal and establishment	48
4.6	Thallus growth	48
<b>Chapter 5. METABOLISM AND PHYSIOLOGY</b>		<b>53</b>
5.1	Introduction	53
5.2	Water relations	53
5.3	Light and photosynthesis	59
5.4	Factors affecting photosynthetic rate	61
5.5	Carbon transfer	62
5.6	Nitrogen fixation	69
5.7	Mineral nutrition	75
5.8	Heavy metals	77
5.9	Ecophysiology	78
5.10	Seasonal variation	81
5.11	Tolerance of temperature extremes	82
<b>Chapter 6. ECOLOGY AND SOCIOLOGY</b>		<b>83</b>
6.1	Limiting substratum factors	83
6.2	Limiting environmental factors	84
6.3	Lichen-substratum interfaces	84
6.4	Weathering and pedogenesis	85
6.5	Competition and succession	87
6.6	The sociological approach	89
6.7	Corticolous communities	90
6.8	Lignicolous communities	93
6.9	Saxicolous communities	93
6.10	Marine and maritime communities	94
6.11	Aquatic communities	95
6.12	Terricolous communities	96
6.13	Man-made substrata	97
6.14	Biodeterioration	97
6.15	Substratum amplitude	98
6.16	Ecology and speciation	99
6.17	Interactions with other organisms	100
<b>Chapter 7. BIOGEOGRAPHY</b>		<b>102</b>
7.1	World	102
7.2	Plate tectonics	103
7.3	Centres of diversity	107
7.4	Factors limiting distribution	110
7.5	European patterns	110
7.6	British patterns	114
7.7	Effect of man on patterns	114

Chapter 8. SECONDARY METABOLITES	116
8.1 Biosynthesis	116
8.2 Microchemical determination	118
8.3 Location and concentration	121
8.4 Systematic value	122
8.5 Chemical hybrids	125
8.6 Role of lichen products	127
8.7 Antibiotic properties and medicinal effects	128
8.8 Dyeing	128
8.9 Perfumes	129
Chapter 9. ENVIRONMENTAL MONITORING	130
9.1 Air pollution	130
9.2 Heavy metals	137
9.3 Radionuclides	137
9.4 Ecological continuity	138
9.5 Lichenometry	140
9.6 Potential uses	141
FURTHER READING	142
INDEX	149
