# Contents

---

**Preface** ix

**1 The bacteria: an introduction** 1

- 1.1 What are bacteria? 1
- 1.2 Why study bacteria? 2
- 1.3 Classifying and naming bacteria 3

**2 The bacterial cell** 5

- 2.1 Shapes, sizes and arrangements of bacterial cells 5
- 2.2 The bacterial cell: a closer look 7
- 2.3 Trichomes and coenocytic bacteria 27

**3 Growth and reproduction** 28

- 3.1 Conditions for growth 28
- 3.2 Growth in a single cell 32
- 3.3 Growth in bacterial populations 37
- 3.4 Diauxic growth 43
- 3.5 Measuring growth 43

**4 Differentiation** 44

- 4.1 The life-cycle of *Caulobacter* 44
- 4.2 Swarming 44
- 4.3 Resting cells 46
- 4.4 Akinetes, heterocysts and hormogonia 50

**5 Metabolism I: energy** 52

- 5.1 Energy metabolism in chemotrophs 54
- 5.2 Energy metabolism in phototrophs 65
- 5.3 Other aspects of energy metabolism 68
- 5.4 Transport systems 70

**6 Metabolism II: carbon** 74

- 6.1 Carbon assimilation in autotrophs 74
- 6.2 Carbon assimilation in heterotrophs 75
- 6.3 Synthesis, interconversion and polymerization of carbon compounds 77
- 6.4 Methylotrophy 82

- 7 Molecular biology I: genes and gene expression 83**
  - 7.1 Chromosomes and plasmids 83
  - 7.2 Nucleic acids: structure 84
  - 7.3 DNA replication 89
  - 7.4 DNA modification and restriction 92
  - 7.5 RNA synthesis: transcription 94
  - 7.6 Protein synthesis 95
  - 7.7 DNA monitoring and repair 100
  - 7.8 Regulation of gene expression 100
  
- 8 Molecular biology II: changing the message 114**
  - 8.1 Mutation 114
  - 8.2 Recombination 118
  - 8.3 Transposition 121
  - 8.4 Gene transfer 122
  - 8.5 Genetic engineering/recombinant DNA technology 130
  
- 9 Bacteriophages 160**
  - 9.1 Virulent phages: the lytic cycle 160
  - 9.2 Temperate phages: lysogeny 165
  - 9.3 Androphages 168
  - 9.4 Phage conversion 168
  - 9.5 Transduction 168
  - 9.6 How does phage DNA escape restriction in the host bacterium? 169
  
- 10 Bacteria in the living world 171**
  - 10.1 Microbial communities 171
  - 10.2 Saprotrophs, predators, parasites, symbionts 172
  - 10.3 Bacteria and the cycles of matter 174
  - 10.4 Ice-nucleation bacteria 180
  - 10.5 Bacteriology *in situ* – fact or fiction? 180
  - 10.6 The ‘greenhouse effect’ 182
  - 10.7 Recombinant bacteria in the environment 183
  
- 11 Bacteria in medicine 184**
  - 11.1 Bacteria as pathogens 184
  - 11.2 The routes of infection 184
  - 11.3 Pathogenesis 186
  - 11.4 The body’s defences 191
  - 11.5 The pathogen: virulence factors 195
  - 11.6 The transmission of disease 197
  - 11.7 Laboratory detection and characterization of pathogens 198
  - 11.8 Prevention and control of transmissible diseases 200
  - 11.9 A note on the treatment of bacterial diseases 202
  - 11.10 Some bacterial diseases 202

- 12 Applied bacteriology I: food** 206
  - 12.1 Bacteria in the food industry 206
  - 12.2 Food preservation 208
  - 12.3 Food poisoning and food hygiene 212
- 13 Applied bacteriology II: miscellaneous aspects** 218
  - 13.1 Feeding animals, protecting plants 218
  - 13.2 Biomining 219
  - 13.3 Biological washing powders 220
  - 13.4 Sewage treatment 220
  - 13.5 Putting pathogens to work 224
  - 13.6 Plastics from bacteria: 'Biopol' 224
- 14 Some practical bacteriology** 225
  - 14.1 Safety in the laboratory 225
  - 14.2 Bacteriological media 225
  - 14.3 Aseptic technique 229
  - 14.4 The tools of the bacteriologist 230
  - 14.5 Methods of inoculation 233
  - 14.6 Preparing a pure culture from a mixture of organisms 235
  - 14.7 Anaerobic incubation 236
  - 14.8 Counting bacteria 237
  - 14.9 Staining 241
  - 14.10 Microscopy 242
- 15 Man against bacteria** 246
  - 15.1 Sterilization 246
  - 15.2 Disinfection 250
  - 15.3 Antisepsis 251
  - 15.4 Antibiotics 252
- 16 The identification and classification of bacteria** 262
  - 16.1 Identification 262
  - 16.2 The classification (taxonomy) of prokaryotes 276
- Appendix Minidescriptions of some genera, families, orders and other categories of bacteria** 288
- Index** 299
