THE CAMBIAL DERIVATIVES

edited by

MUHAMMAD IQBAL
Hamdard University
New Delhi, India

With 74 figures and 13 tables in the text

1995

GEBRÜDER BORNTRAEGER · BERLIN · STUTTGART

VF

Contents

A. THE MERISTEM

- Structure and behaviour of vascular cambium and the mechanism and control of cambial growth** (with 7 figures) – M. IQBAL
 (Historical background – Concept of the cambium – Cambial morphology – Cambial cytology – Cambial mitosis – Seasonal cambial activity – Hormonal control of cambial growth – Cambial derivatives – Conclusions – Literature cited) 1– 67
- Morphogenetic waves in cambium and figured wood formation** (with 17 figures) – B. ZAGÓRSKA-MAREK
 (The attributes of cambial waves – The size of cambial wave parameters and the wavy wood pattern – Ontogenetic changes in the size of cambial wave parameters and wood figure – Interaction of cambial waves – Conclusions – Literature cited) 69– 92

B. THE INNER DERIVATIVES

- Vessel element differentiation** (with 4 figures) – B. G. BUTTERFIELD
 (The nature of hardwood vessels – The morphology of perforation plates – Perforation plate formation – Literature cited) 93–106
- Ultrastructural factors affecting xylem differentiation** (with 8 figures) – J. R. BARNETT
 (The role of cytoplasmic components – The role of the cell wall – The role of plasmodesmata – Plasmodesmata and the evolution of fibres – The role of pits – Secondary wall patterns – Conclusions – Literature cited) 107–130
- Cell wall structure, function and degradation** (with 5 figures and 3 tables) – G. P. BERLYN, R. C. BECK & K. E. WOLTER
 (Concept – Background – Cell wall free space – Cell wall chemistry – Literature cited) 131–148
- Sapwood and heartwood** (with 4 figures) M. N. B. NAIR
 (Proportion of sapwood and heartwood – Extractives in sapwood and heartwood – Heartwood formation – Heartwood induction – Literature cited) 149–172
- Comparative wood anatomy: New directions and opportunities** – S. CARLQUIST
 (Wood evolution – Wood identification – Functional wood anatomy – Techniques – Literature cited) 173–185

C. THE OUTER DERIVATIVES

- Secondary phloem: Origin, structure and specialization** (with 6 figures and 8 tables) – M. IQBAL & M. S. ZAHUR
 (Secondary phloem vs bark – Origin of the secondary phloem – Morphological variations – Structural organization – Phloem ontogeny – Fossil phloem – Trends of specialization – Conclusions – Literature cited) 187–240
- Ultrastructural differentiation of sieve elements** (with 6 figures) M. IQBAL
 (Phloem development – Sieve element differentiation – The cells specially associated with sieve elements – Conclusions – Literature cited) 241–270
- Phloem proteins: Structure, biochemistry and function** (with 3 figures) – D. D. SABNIS & H. M. SABNIS
 (P-Protein Structure – Biochemistry – Function(s) of P-Protein – Literature cited) . 271–292

Developmental and functional aspects of the periderm (with 9 figures) – Y. WAISEL (The structure of the periderm – Phellogen initiation – Factors affecting phellogen development – Morphology of the periderm and rhytidome – Phellogen activity – Relationship between cambial and phellogen activities – Lenticels – Periderms as protective tissues – Conclusions – Literature cited)	293–315
Some notes on gum and resin ducts and cavities in angiosperms (with 5 figures and 2 tables) – M. N. B. NAIR (Gums, resins and gumresins – Gum ducts and gum cavities – Structure of the epithelial cell – Site of synthesis of gums and resins – Mode of secretion – Improvement in the production of exudates – Literature cited)	317–340
Subject Index	341–344
Plant Index	345–352
Author Index	353–363
