## Chapter 1

### PEM FUEL CELL BIPOLAR PLATES

D. Bloomfield and V. Bloomfield

I.	Introduction .....	1
1.	NAFION MEA Based Bipolar Plate Problems ...	2
2.	Polybenzimidazole/H <sub>3</sub> PO <sub>4</sub> .....	3
II.	Definition .....	3
1.	Separator Plate .....	4
2.	Flow Field .....	5
3.	Port and Port Bridges .....	6
4.	Seals .....	7
5.	Frame .....	8
III.	Bipolar Plate Features .....	8
1.	Tolerances .....	9
2.	Thermal Management .....	9
3.	Electrical Conduction .....	10
4.	Water Management .....	11
5.	Low Cost .....	13
6.	Stable, Free from Corrosion Products .....	13
	(i) Galvanic Corrosion .....	13
IV.	Materials and Processes .....	15
1.	Comparison of Carbon and Metal .....	15
	(i) Operational .....	16
	(ii) Forming Cost .....	16
2.	Carbon .....	18
	(i) Molded Graphite .....	18
	(ii) Paper .....	19
	(iii) Stamped Exfoliated Graphite (Grafoil, Graflex) .....	19

3. Metal .....	19
(i) Forming Metal Bipolar Plates .....	20
(ii) Intrinsically Corrosion Resistant Metals ...	21
(iii) Direct Coatings .....	21
(iv) Conductive Polymer Grafting .....	24
References .....	33

## Chapter 2

### BASIC APPLICATIONS OF THE ANALYSIS OF VARIANCE AND COVARIANCE IN ELECTROCHEMICAL SCIENCE AND ENGINEERING

Thomas Z. Fahidy

I. Introduction .....	37
II. Basic Principles and Notions .....	38
III. ANOVA: One-Way Classification .....	40
1. Completely Randomized Experiment (CRE) .....	42
2. Randomized Block Experiment (RBE) .....	42
(i) Example 1: A Historical Perspective of Caustic Soda Production .....	43
(ii) Example 2: Metallic Corrosion .....	45
IV. ANOVA: Two-Way Classification .....	46
1. Null and Alternative Hypotheses .....	46
2. Illustration of Two-Way Classification: Specific Energy Requirement for an Electrolytic Process .....	47
V. ANOVA: Three-Way Classifications .....	49
VI. ANOVA: Latin Squares (LS) .....	51
VII. Applications of the Analysis of Covariance (ANCOVA) .....	53
1. ANCOVA with Velocity as Single Concomitant Variable .....	53
(i) Pattern A(CRE) .....	53
(ii) Pattern B(RBE) .....	56
2. ANCOVA with Velocity and Pressure Drop Acting as Two Concomitant Variables .....	58
3. Two Covariate-Based ANCOVA of Product Yields in a Batch and in a Flow Electrolyzer .....	58
4. Covariance Analysis for a Two-Factor, Single Cofactor CRE .....	60

<b>Contents</b>	<b>xvii</b>
VIII. Miscellaneous Topics .....	62
1. Estimation of the Type II Error in ANOVA .....	62
2. Hierarchical Classification .....	64
3. ANOVA-Related Random Effects .....	66
4. Introductory Concepts of Contrasts Analysis .....	69
IX. Final Remarks .....	71
Acknowledgments .....	72
List of Principal Symbols .....	72
References .....	73

### Chapter 3

#### NANOMATERIALS IN LI-ION BATTERY ELECTRODE DESIGN

Charles R. Sides and Charles R. Martin

I. Introduction .....	75
II. Templates Used .....	78
1. Track-Etch Membranes .....	78
2. Alumina Membranes .....	80
3. Other Templates .....	81
II. Nanostructured Cathodic Electrode Materials .....	83
1. Electrode Fabrication .....	84
(i) Nanostructured Electrode .....	84
(ii) Control Electrodes .....	85
2. Structural Investigations .....	86
3. Electrochemical Characterization .....	87
(i) Cyclic Voltammetry .....	87
(ii) Rate Capabilities .....	89
III. Nanostructured Anodic Electrodes .....	91
1. Electrode Fabrication .....	92
(i) Nanostructured Electrodes .....	92
(ii) Control Electrodes .....	92
2. Structural Investigations .....	93
3. Electrochemical Investigations .....	95
V. Nanoelectrode Applications .....	97
1. Low-Temperature Performance .....	97
(i) Electrode Fabrication .....	97
(ii) Strategy .....	98
(iii) Electrochemical Results .....	99

(iv) Electronic Conductivity .....	101
(v) Cycle Life .....	102
2. Variations on a Synthetic Theme .....	102
(i) Nanocomposite of LiFePO <sub>4</sub> /Carbon .....	102
(ii) Improving Volumetric Capacity .....	109
VI. Carbon Honeycomb .....	117
1. Preparation of Honeycomb Carbon .....	118
2. Electrochemical Characterization .....	121
VII. Conclusions .....	123
Acknowledgements .....	123
References .....	124

#### Chapter 4

### DIRECT METHANOL FUEL CELLS: FUNDAMENTALS, PROBLEMS AND PERSPECTIVES

Keith Scott and Ashok K. Shukla

I. Introduction .....	127
II. Operating Principle of the SPE-DMFC .....	128
III. Electrode Reaction Mechanisms in SPE-DMFCs .....	132
1. Anodic Oxidation of Methanol .....	132
2. Cathodic Reduction of Oxygen .....	139
IV. Materials for SPE-DMFCs .....	140
1. Catalyst Materials .....	140
(i) Anode Catalysts .....	140
(ii) Oxygen Reduction Catalysts .....	149
(iii) Membrane Materials .....	156
V. Direct Methanol Fuel Cell Performance .....	163
1. DMFC Stack Performance .....	175
2. Alternative Catalysts and Membranes in the DMFC .....	178
3. Alkaline Conducting Membrane and Alternative Oxidants .....	183
VI. Conventional vs. Mixed-Reactant SPE-DMFCs .....	185
VII. Mathematical Modelling of the DMFC .....	192
1. Methanol Oxidation .....	195
2. Empirical Models for Cell Voltage Behaviour .....	198
3. Membrane Transport .....	202

4. Effect of Methanol Crossover on Fuel Cell Performance .....	204
5. Mass Transport and Gas Evolution .....	205
6. DMFC Electrode Modelling .....	209
7. Cell Models .....	210
8. Single Phase Flow .....	212
9. Two- and Three-Dimensional Modelling .....	213
10. Dynamics and Modelling .....	215
11. Stack Hydraulic and Thermal Models .....	215
VIII. Conclusions .....	216
List of Symbols .....	217
References .....	218

### Chapter 5

#### REVIEW OF DIRECT METHANOL FUEL CELLS

Brenda L. García and John W. Weidner

I. Introduction .....	229
II. Anode Kinetics .....	232
1. Reaction Mechanism .....	232
2. Methanol Oxidation Catalysts .....	233
(i) Platinum and Platinum Catalyst Structure ...	233
(ii) Platinum and Platinum Alloy Catalyst Performance .....	240
III. Oxygen Reduction Reaction Catalysts .....	247
IV. High Temperature Membranes .....	248
V. Methanol Crossover .....	253
1. Magnitude of Crossover .....	253
2. Effect of CO <sub>2</sub> Crossover .....	258
3. Mixed-Potential Effects .....	260
4. Novel Membranes to Reduce Methanol Crossover .....	261
VI. DMFC Modeling Review .....	264
1. One-Dimensional Models .....	265
2. Two-Dimensional and Three-Dimensional Models .....	273
VII. Summary .....	278
References .....	280

*Chapter 6*

DIRECT NUMERICAL SIMULATION OF  
POLYMER ELECTROLYTE FUEL CELL CATALYST  
LAYERS

Partha P. Mukherjee, Guoqing Wang, and  
Chao-Yang Wang

I.	Introduction .....	285
II.	Direct Numerical Simulation (DNS) Approach .....	288
	1. Advantages and Objectives of the DNS Approach .....	289
	2. DNS Model - Idealized 2-D Microstructure.....	290
	3. Three-Dimensional Regular Microstructure .....	293
	4. Results and Discussion .....	299
	(i) 2-D Model: Kinetics- vs. Transport-Limited Regimes .....	299
	(ii) Comparison of the Polarization Curves between 2-D and 3-D Simulations .....	304
III.	Three-Dimensional Random Microstructure .....	305
	1. Random Structure .....	306
	2. Structural Analysis and Identification .....	307
	3. Governing Equations .....	311
	4. Boundary Conditions .....	314
	5. Results and Discussion .....	316
IV.	DNS Model – Water Transport .....	320
	1. Water Transport Mechanism .....	321
	2. Mathematical Description .....	323
	3. Results and Discussion .....	327
	(i) Inlet-Air Humidity Effect .....	327
	(ii) Water Crossover Effect .....	330
	(iii) Optimization of Catalyst Layer Compositions .....	331
V.	3-D Correlated Microstructure .....	333
	1. Stochastic Generation Method .....	333
	2. Governing Equations, Boundary Conditions and Numerical Procedure .....	334
	3. Results and Discussion .....	337
VI.	Conclusions .....	340
	Acknowledgements .....	340
	References .....	341
INDEX	.....	343
