Pre	face	v
List	t of Symbols and Abbreviations	xiii
Intr	Introduction	
I	Binary Polynomial Transforms	1
	Binary Polynomial Arithmetical and Logical Functions a	
	Matrices	3
1.1	Introduction	3
1.2	Rademacher Functions and Matrices	4
1.3	Arithmetical and Logical Binary Polynomial Functions. Con-	0
	structions Using One Binary Operation	9
	1.3.1 Walsh functions and matrices	10
	1.3.2 Polynomial logical functions and matrices	11
1.4	Binary Polynomial Logical Functions and Matrices. Con-	16
1 5	structions Using Two Operations	10
1.5	Binary Polynomial Logical Functions and Matrices. Exten- sions of Dimension	24
	1.5.1 Interval splicing matrices	24 24
	1.5.2 Interval absorbing matrices	24 27
		21
2	Fast Algorithms and Complexity of Binary Polynomial T	rans-
	forms	35
2.1	Introduction	35
2.2	General Approach to the Fast Algorithms of Binary Polyno-	
	mial Transforms	36
2.3	Fast Rademacher Transforms	38
<b>2.4</b>	Fast Walsh Transforms	39
2.5	Fast Conjunctive Transforms	43
2.6	Fast Interval Transforms	46
2.7	Fast Disjunctive-Conjunctive Transforms	51
2.8	Lower Bounds of the Complexity of Some Binary Polynomial	
	Transforms	58

~ ...

3	Logical Correlations and Binary Polynomial Transforms	63
3.1		63
3.2	Arithmetical and Logical Correlation Functions	64
	3.2.1 Arithmetical auto- and cross-correlation functions .	64
	3.2.2 Logical auto- and cross-correlation functions	64
	3.2.3 Relations between the arithmetical and logical auto-	
	correlation functions	65
3.3		67
	3.3.1 Definitions	67
	3.3.2 Properties of logical $\rho$ -correlation	71
3.4		71
	3.4.1 Computation of general cross-correlation	71
	3.4.2 Computation of logical cross-correlation based on any	
	Boolean operation	74
3.5	•	75
3.6	Comments	78
II	Binary Polynomial Transforms and Digital Logic	85
4	Spectral Methods in Analysis of Boolean Functions	87
4.1		87
4.2		97
4.3		99
4.4		100
4.5		101
4.6		103
4.7		106
4.8	Activities of the Variables of Boolean Functions	109
	a Boolean function	111
4.9		
1.0	Operations over the Normal Forms	112
	4.9.1 Connections between normal forms of Boolean func-	
	tions	113
	4.9.2 Logical operations over normal forms	115
5	Spectral Methods in Minimization of Boolean Functions	117
5.1		117
5.2	1 0	
	viated Disjunctive and Conjunctive Normal Forms of Boolean Function	121

- -

5.3	Deadlock Tests and Abbreviated Normal Forms of Boolean	
	Functions	130
	5.3.1 Unconditional deadlock tests for tables	130
	5.3.2 Abbreviated disjunctive and conjunctive normal forms	
	of Boolean functions with a small number of ones (ze-	
	$\operatorname{ros})$	136
5.4	Deadlock and Minimal Disjunctive and Conjunctive Normal	
	Forms of Boolean Functions	142
5.5	Minimization of Positive (Monotone) Boolean Functions	147
	5.5.1 Minimal disjunctive and conjunctive normal forms of	
	positive Boolean functions	147
	5.5.2 Minimization of the dual of a positive Boolean function	150
5.6	Quasi-Minimization of Boolean Functions	152
5.7	Reed-Muller Polynomials of Boolean Functions	161
	5.7.1 Spectral approach to the construction of Reed-Muller	
	polynomials	161
	5.7.2 Spectral approach to generalized Reed-Muller poly-	
	nomials construction	163
5.8	Comments	167
III	Applications in Nonlinson Digital Filtering
