CONTENTS

PART ONE

DISCOVERING THE SCIENCE OF ASTRONOMY

1

CHAPTER 1

BEYOND THE BLUE HORIZON: A GRAND TOUR OF THE UNIVERSE 3

- 1.1 OUR VIEW OF THE COSMOS 4
Astronomy Uses Large and Small Numbers
- 1.2 THE SOLAR SYSTEM 6
The Earth-like Planets
The Giant Planets
The Star of the Solar System
The Outer Reaches of the Solar System
Are There Planets around Other Stars?
- 1.3 STARS, GALAXIES, AND BEYOND 9
Star Formation
Stellar Evolution
Clusters of Stars
Galaxies
Clusters of Galaxies
- 1.4 WHERE DOES ASTRONOMY GO FROM
HERE? 13

CHAPTER 2

SCIENCE AND PSEUDOSCIENCE 17

- 2.1 AN EXPEDITION TO EARTH (WITH
APOLOGIES TO ARTHUR C. CLARKE) 18
- 2.2 ASTRONOMY AS AN OBSERVATIONAL
SCIENCE 21
The Process of Doing Astronomy
The Astronomer's Challenge
The Astronomical "Time Machine"

- 2.3 THE EXPLOSION OF KNOWLEDGE IN THE
TWENTIETH CENTURY 24
The "Game" of Science
From Idea to Textbook—How Science Proceeds
- 2.4 HOW TO TELL THE SHEEP FROM THE
GOATS 27
Is the Hypothesis at Risk?
Don't Confuse Me with the Facts
Simple Answers to Complex Problems
Playing the Underdog
Conspiracy Theories
Playing on Fear and Emotion
Do They Do Research?
For Whom Do They Write?
- 2.5 DO NEW IDEAS THROW
OUT THE OLD? 30
Concluding Thoughts

CHAPTER 3

ASTRONOMICAL OBSERVATIONS: ANGLES AND ERRORS 34

- 3.1 ANGLES AND ANGULAR
MEASUREMENT 35
- 3.2 ANGLES ON THE CELESTIAL SPHERE 36
- 3.3 THE RELATIONSHIP BETWEEN TRUE AND
APPARENT SIZE 37
Solar Eclipses
- 3.4 MEASUREMENT UNCERTAINTY IN
SCIENCE 39
Precision and Accuracy
Random Errors
Systematic Errors

- 3.5 SYSTEMATIC ERRORS IN ASTRONOMY:
THE KAPTEYN UNIVERSE 41
- DISCOVERY 3-1
MEASURING YOUR ROOM 43

CHAPTER 4

**BASIC OBSERVATIONS AND
INTERPRETATIONS OF THE SKY 45**

- 4.1 EARLY OBSERVATIONS OF THE SKY 46
- 4.2 EARLY GREEK OBSERVATIONS:
THE ROUND EARTH 48
- 4.3 THE OBSERVED MOTIONS
OF THE SKY 50
The Celestial Sphere and the Pole Star
A Model of the Sky
- 4.4 THE MOTION OF THE SUN 53
The Diurnal Motion
The Motion of the Sun with Respect
to the Stars
Solar and Sidereal Days
- 4.5 THE REASONS FOR THE SEASONS 55
- 4.6 THE LOCATION OF STARS ON THE
CELESTIAL SPHERE 56
Precession
- 4.7 THE MOTION AND PHASES
OF THE MOON 57
The Motion of the Moon
The Phases of the Moon
Eclipses
- 4.8 THE MOTIONS OF THE PLANETS 61
- 4.9 HOW STARS GET THEIR NAMES 63
- 4.10 THE BRIGHTNESS OF STARS 63

**APPENDIX:
OBSERVING HINTS AND
THE USE OF STAR CHARTS 64**

- Brightness of Stars
- Observing the Stars in the Northern Part
of the Sky
- The Northern Sky in September
- The Northern Sky at Other Times of Year

- Observing the Rest of the Sky:
Using the Star Maps

CHAPTER 5

**THE HISTORICAL QUEST TO MODEL
THE SOLAR SYSTEM 70**

- 5.1 GREEK ASTRONOMY 71
What the Greeks Inherited
Aristarchus of Samos
Eratosthenes
Hipparchus
Other Deductions of the Greek Astronomers:
The Distances of the Planets
The Apparent Motions of the Planets
Relative to the Stars
The Geocentric Model of the Solar System
The Hypothesis of Circular Motion
Ptolemy
- 5.2 ASTRONOMY DURING THE
MIDDLE AGES 76
- 5.3 THE HELIOCENTRIC HYPOTHESIS 77
Copernicus
Tycho Brahe
Johannes Kepler
- 5.4 KEPLER'S LAWS OF
PLANETARY MOTION 81
- 5.5 THE SEARCH FOR
UNDERLYING LAWS 82
Galileo
Newton
Newton's Law of Gravity
Weight
Momentum
Newton's Form of Kepler's Third Law
Successes of Newton's Laws
- 5.6 PROOF OF THE HELIOCENTRIC
HYPOTHESIS 88
- 5.7 OBSERVATIONAL EVIDENCE
OF THE EARTH'S ROTATION 90
Foucault Pendulum
Coriolis Effects:
Additional Evidence for a Spinning Earth
- DISCOVERY 5-1
WEIGHTLESSNESS 92

PART TWO

DISCOVERING THE NATURE AND EVOLUTION
OF THE SOLAR SYSTEM

97

CHAPTER 6**THE STRUCTURE AND FORMATION
OF THE SOLAR SYSTEM 99**

- 6.1 AN OVERVIEW OF THE SOLAR SYSTEM 100
- 6.2 ORBITAL REGULARITIES IN THE SOLAR SYSTEM 103
- 6.3 THE DISTRIBUTION OF ANGULAR MOMENTUM IN THE SOLAR SYSTEM 104
- 6.4 HYPOTHESES OF THE ORIGIN OF THE SOLAR SYSTEM 105
A Simple Hypothesis That Does Not Work
The Nebular Hypothesis
Collision Hypotheses
Additional Hypotheses
- 6.5 MODERN IDEAS 107
Energy and Solar System Formation
The Nebular Hypothesis Revisited and Improved
The Role of Dust Grains in Planet Formation
Refinements of the Theory
Leftover Odds and Ends
The Angular Momentum Problem
Which Hypothesis of Solar System Formation is Preferred?
Model Solar Systems
- 6.6 DO OTHER STARS HAVE PLANETS? 115
- DISCOVERY 6-1
A SCALE MODEL OF THE SOLAR SYSTEM 117

CHAPTER 7**THE SMALLEST BODIES OF THE
SOLAR SYSTEM: COMETS, MINOR
PLANETS, AND METEORITES 120**

- 7.1 COMETS 121
The Structure of Comets
The Dirty Snowball Model

Orbits of Comets
The Oort and Kuiper Comet Clouds
Recent Spacecraft Studies of Comets

- 7.2 MINOR PLANETS 126
Characteristics of the Minor Planets
Orbits of the Minor Planets
The Trojans and the Kirkwood Gaps
Why Are the Minor Planets So Small?
Chemical Composition
- 7.3 METEORS, METEOR SHOWERS,
AND METEORITES 129
Meteorite Craters
Did an Asteroid or Comet Impact Send the
Dinosaurs into Extinction?
Meteor Showers
- 7.4 INTERPLANETARY DUST 133
- 7.5 METEORITES AND THE
EARLY SOLAR SYSTEM 134
Chemical Composition
Internal Structure
The Origin of Meteorites
Meteorite Dating
Did a Supernova Explosion Trigger the Formation
of Our Solar System?
- DISCOVERY 7-1
ASTEROID BRIGHTNESS VARIATIONS 138

CHAPTER 8**THE EARTH AND THE MOON 143**

- 8.1 THE EARTH AS AN
ASTRONOMICAL BODY 144
Determination of Basic Properties
- 8.2 THE EARTH'S INTERIOR 146
Seismic Studies
Plate Tectonics
The Source of Heat in the Interior
- 8.3 THE EARTH'S SURFACE 150
Rock Types, Processes, and Ages

- Chemical Composition
- Volcanism
- Mountains
- Impact Craters
- Ocean Tides
- 8.4 **ATMOSPHERE 153**
 - The Greenhouse Effect
 - Atmospheric Circulation
 - Origin and Maintenance of the Atmosphere
- 8.5 **MAGNETISM 155**
- 8.6 **EARTH-BASED STUDIES OF THE MOON 157**
 - Basic Data
 - The Moon's Atmosphere
 - The Lunar Surface
- 8.7 **EXAMINING THE LUNAR SURFACE 159**
 - Craters
 - Maria
 - Surface Movement
 - Lava Channels and Tubes
 - Highlands and the Far Side of the Moon
- 8.8 **MANNED EXPLORATION OF THE LUNAR SURFACE 164**
 - The Composition and Structure of the Lunar Surface Material
 - The Age of the Lunar Surface
 - The Moon's Interior
- 8.9 **THE ORIGIN OF THE MOON 167**
- 8.10 **THE TIDES AND THE FUTURE OF THE EARTH-MOON SYSTEM 170**
- 8.11 **THE LUNAR LASER-RANGING PROGRAM 170**
- **DISCOVERY 8-1 LUNAR SURFACE FEATURES, AS SEEN FROM EARTH 171**

CHAPTER 9

THE EARTH-LIKE PLANETS 176

- 9.1 **INTRODUCTION TO THE TERRESTRIAL PLANETS 177**
 - Early Ground-based Studies
 - The Beginning of Planetary Space Exploration
- 9.2 **LARGE-SCALE CHARACTERISTICS 181**
 - Orbits

- Rotation
- Basic Properties: Size, Mass, Density
- Seasons

9.3 **ATMOSPHERES 183**

- Atmospheric Chemical Composition
- Atmospheric Temperature
- Atmospheric Pressure
- Lightning
- Clouds
- Atmospheric Circulation
- Why Do the Atmospheric Compositions Differ So Much?

9.4 **SURFACES 186**

- The View from Orbit
- The View from the Surface
- Surface Temperatures
- Surface Compositions
- Water
- Craters
- Impact Basins
- Continents, Mountains, and Volcanoes
- Faults, Tectonics, Cliffs, and Valleys
- Wind Sculpting
- Polar Regions

9.5 **INTERIORS 197**

- Magnetic Fields
- Interior Structures

9.6 **SATELLITES 198**

9.7 **EVOLUTIONARY COMPARISON 199**

9.8 **FUTURE STUDIES 200**

9.9 **MARS LIFE-DETECTION EXPERIMENTS 200**

THE PLANETS ONE BY ONE 203

CHAPTER 10

THE JOVIAN PLANETS AND PLUTO 205

10.1 **INTRODUCTION 206**

- An Overview of Ground-based Studies
- Space Exploration of Jovian Planets

10.2 **LARGE-SCALE CHARACTERISTICS 208**

- Orbits and Rotation
- Size, Mass, Density
- Seasons
- Excess Energy

10.3	ATMOSPHERES 210		
	Appearance and Circulation		
	Chemical Composition		
10.4	PLANETARY INTERIORS 212		
	Magnetic Fields		
	Interior Structure		
10.5	SATELLITES 215		
	The Satellites of Jupiter		
	The Satellites of Saturn		
	The Satellites of Uranus		
			The Satellites of Neptune
		10.6	PLANETARY RINGS 222
		10.7	PLUTO 226
		10.8	FUTURE STUDIES OF THE OUTER SOLAR SYSTEM 227
			Future Space Probes
			Are there Planets beyond Pluto?
			THE PLANETS ONE BY ONE 232

PART THREE

DISCOVERING THE TECHNIQUES OF ASTRONOMY

235

CHAPTER 11

THE NATURE OF LIGHT 237

11.1	LIGHT AS A RAY 238
	Reflection
	Refraction
11.2	LIGHT AS A WAVE 238
	Diffraction
	Electromagnetic Radiation
	The Speed of Light
	Interference
	Polarization
11.3	LIGHT AS A STREAM OF PARTICLES 245
	The Photoelectric Effect
	Models of Light
□	DISCOVERY 11-1 IMAGES IN A MIRROR 247
□	DISCOVERY 11-2 REFRACTION OF LIGHT 249

CHAPTER 12

**TELESCOPES:
OUR EYES OF DISCOVERY 253**

12.1	THE FORMATION OF IMAGES 254
12.2	TELESCOPES 256
	The Light-gathering Power of a Telescope
	Resolving Power
	Magnification
	The Mounting of a Telescope
12.3	COMPARING REFLECTING AND REFRACTING TELESCOPES 260
12.4	REFLECTING TELESCOPES OF VARIOUS TYPES 261
12.5	THE LARGE TELESCOPES OF THE FUTURE 263
12.6	DETECTORS AND INSTRUMENTS 264
	Cameras and Film
	Photoelectric Photometers
	Modern Electronic Detectors
12.7	RADIO ASTRONOMY 265
	Interferometers
12.8	OPTICAL AND RADIO OBSERVATORY SITES 269
12.9	BEYOND OPTICAL AND RADIO ASTRONOMY 270
12.10	THE HUBBLE SPACE TELESCOPE 271

CHAPTER 13**SPECTRA:
THE KEY TO UNDERSTANDING
THE UNIVERSE 274**

- 13.1 OBSERVATIONS OF SPECTRA 275
 The Principle of the Spectrometer
 The Continuous Spectrum: Kirchhoff's First Law
 The Dependence of the Continuous Spectrum on Temperature
 Wien's Law
 Objects Can Be Seen by their Emitted Light or their Reflected Light
 Discrete Emission Spectra: Kirchhoff's Second Law

The Spectral "Fingerprints" of the Chemical Elements
 The Sun's Dark-Line Spectrum: Kirchhoff's Third Law

- 13.2 UNDERSTANDING SPECTRA 283
 Energy-Level Diagram of the Hydrogen Atom
 Why Different Elements Have Different Spectra
 Atomic Explanation of Kirchhoff's Laws
- *13.3 EXAMPLES OF SPECTRA 288
 A Model of the Sun Based on its Spectrum
 The Sun's Flash Spectrum
 Ionized Gas between the Stars
 Neutral Gas between the Stars:
 Interstellar Absorption Lines

PART FOUR**DISCOVERING THE NATURE AND EVOLUTION OF STARS**

295

CHAPTER 14**UNDERSTANDING
STELLAR SPECTRA 297**

- 14.1 SPECTRAL TYPES 298
 Why Should Spectra Vary in Appearance?
 Observations of Stellar Spectra
- 14.2 THE COSMIC ABUNDANCE OF THE CHEMICAL ELEMENTS 306
- 14.3 THE DOPPLER EFFECT 307
- 14.4 WHAT WE CAN LEARN FROM SPECTRAL LINES 310
 The Rotation of Stars
 Density in a Stellar Atmosphere
 Turbulence in Stars
 Magnetic Fields in Stars
 A Final Example of Stellar Spectra
- DISCOVERY 14-1
 CLASSIFICATION USING KNOWN SPECTRA 313

CHAPTER 15**THE OBSERVED PROPERTIES OF
NORMAL STARS 318**

- 15.1 THE HERTZSPRUNG-RUSSELL DIAGRAM 319
 A Graphing Experiment
 Distance Measurements
 Variation of Stellar Brightness with Distance
 Introduction to the Hertzsprung-Russell Diagram
 The Nearest Stars
 The Brightest Stars
 Interpreting the Hertzsprung-Russell Diagram
- 15.2 STELLAR RADII: MAIN-SEQUENCE, GIANT, SUPERGIANT, AND WHITE DWARF STARS 324
- 15.3 EXPLANATION OF THE MAIN SEQUENCE 326
 The Mass-Luminosity Relation
 Densities of Stars
- 15.4 STELLAR DISTANCES AND THE H-R DIAGRAM 328

- 15.5 BINARY STARS 329
 - Visual Binaries
 - Spectroscopic Binaries
 - Eclipsing Binaries
- 15.6 RECENT STUDIES OF STELLAR SIZES 332
 - Lunar Occultations
 - Optical Interferometry
- DISCOVERY 15-1
VISUAL BINARY STARS 334
- DISCOVERY 15-2
SPECTROSCOPIC BINARY STARS 335

CHAPTER 16
**THE SUN AND STARS:
 THEIR ENERGY SOURCES
 AND STRUCTURE 339**

- 16.1 THE POWER PRODUCED BY THE SUN 340
- 16.2 ENERGY SOURCES 340
 - Gravitational Collapse
 - Radioactivity
 - Nuclear Reactions: Fission versus Fusion
 - The Proton-Proton Chain
 - The Carbon-Nitrogen-Oxygen Cycle
- 16.3 THE CONDITIONS REQUIRED FOR FUSION 345
 - Temperatures and Densities
 - Controlled Thermonuclear Fusion—An Aside
- 16.4 ANTIMATTER AND NEUTRINOS 346
- 16.5 STELLAR STRUCTURE 347
 - Pressure and Energy Equilibrium
 - Energy Transport
- 16.6 THE LIFETIMES OF STARS 350
- 16.7 THE SUN—A TYPICAL STAR 352
 - The Photosphere
 - The Convective Zone
 - Sunspots
 - The Sun's Magnetic Field
 - The Chromosphere
 - The Corona
 - The Solar Wind
 - Flares and Other Surface Activity on the Sun
 - Solar Oscillations
 - Solar Postscript

- DISCOVERY 16-1
SOLAR GRANULATION 361

CHAPTER 17
**STAR FORMATION AND EVOLUTION
 TO THE MAIN SEQUENCE 365**

- 17.1 MATTER FOR STAR FORMATION 366
 - Molecules in the Interstellar Medium
 - The Formation of Molecules in Dust Clouds
 - The Hydrogen Molecule
- 17.2 THEORETICAL STAR FORMATION STUDIES 369
 - Initiation of Star Formation
 - Theoretical Models of Early Stellar Evolution
 - The Approach to the Main Sequence
- 17.3 OBSERVATIONAL STAR-FORMATION STUDIES: THE SEARCH FOR STELLAR PRECURSORS 373
 - Complexes of Molecular Clouds
 - OB Associations
 - Bok Globules
 - Infrared Sources
 - T Tauri Stars
 - FU Orionis Stars
 - Herbig-Haro Objects
 - Star Clusters
- 17.4 A PROMINENT REGION OF STAR FORMATION: THE ORION NEBULA 380

CHAPTER 18
**STELLAR EVOLUTION AFTER THE
 MAIN SEQUENCE 385**

- 18.1 THE MID-LIFE EVOLUTION OF SUN-LIKE STARS 386
 - Why Stars Leave the Main Sequence
 - Becoming a Red Giant
 - Evolution after the Giant Phase
- 18.2 THE MID-LIFE EVOLUTION OF LESS MASSIVE STARS 389
- 18.3 THE MID-LIFE EVOLUTION OF MORE MASSIVE STARS 390
- 18.4 PULSATING STARS 391

- 18.5 MASS LOSS, BINARY STARS, AND STELLAR EVOLUTION 392
- 18.6 THE DEATH OF LOW-MASS STARS 394
 - Planetary Nebulae
 - Observational Properties of White Dwarfs
 - The Structure of White Dwarfs
- 18.7 THE OBSERVATIONAL EVIDENCE FOR STELLAR EVOLUTION 399
 - The Hertzsprung-Russell Diagrams of Star Clusters
 - Evidence from Spectra Pertaining to Stellar Evolution
 - A Direct Detection of Stellar Evolution

CHAPTER 19

CATAclysmic ASTRONOMY 407

- 19.1 NOVAE 408
 - Observations
 - The Place of Novae in Stellar Evolution
 - Do Novae Involve Large or Small Stars?
 - How a Nova Explodes

- 19.2 SUPERNOVAE 412
 - Observations
 - Type I Supernovae
 - Type II Supernovae
 - Production of Heavy Elements by Massive Stars
 - Supernova 1987A
- 19.3 NEUTRON STARS AND PULSARS 418
 - Pulsars
 - Why Pulsars "Pulse"
 - A Model of a Neutron Star
 - Binary Pulsars
 - Millisecond Pulsars
 - Are There Planets Around Pulsars?
- 19.4 BLACK HOLES 423
 - The Theoretical Prediction of Black Holes
 - Observations of Black Holes
- *19.5 EXAMPLES OF BEASTS IN THE COSMIC ZOO 427
 - SS433
 - Cygnus X-3
 - Geminga
 - A General Model

PART FIVE

DISCOVERING THE NATURE AND EVOLUTION OF GALAXIES AND THE UNIVERSE

433

CHAPTER 20

THE MILKY WAY: OUR GALAXY 435

- 20.1 OUR PLACE IN THE MILKY WAY 436
 - The Distribution of Globular Clusters
 - The Motion of the Sun Around the Galaxy
 - The Mass of Our Galaxy
 - The Motion of Other Stars
 - Dark Matter
 - High-Velocity Stars
- 20.2 INTERSTELLAR GAS AND DUST 441
 - Interstellar Dust: Extinction of Starlight
 - Interstellar Dust: Reddening
 - Interstellar Dust: Reflection Nebulae
 - Interstellar Dust: Polarization of Starlight

- Interstellar Dust: Thermal Radiation
- Interstellar Dust: Chemical Composition and Formation
- Interstellar Gas
- 21-cm Hydrogen Emission
- The Structure of the Interstellar Medium
- 20.3 THE STRUCTURE OF THE MILKY WAY SYSTEM 447
 - Optical Evidence for the Spiral Structure of the Galaxy
 - Radio Evidence for the Spiral Structure of the Galaxy
 - The Cause of Spiral Structure
 - The Density-Wave Theory
 - The Galactic Halo and the Nuclear Bulge

The Center of the Galaxy
Stellar Populations

20.4 THE FORMATION AND EVOLUTION OF THE GALAXY 455
The Chemical Evolution of the Galaxy
The Formation of the Milky Way

20.5 THE GALACTIC MAGNETIC FIELD 457
The 21-cm Zeeman Effect
Interstellar Polarization

20.6 COSMIC RAYS 458
Observations of Cosmic Rays
Origin of the Cosmic Rays

□ DISCOVERY 20-1
GALACTIC ROTATION 459

□ DISCOVERY 20-2
THE DISTRIBUTION OF DIFFERENT OBJECTS AROUND THE GALAXY 460

CHAPTER 21
GALAXIES 466

21.1 THE HISTORICAL PROBLEM OF THE NEBULAE 467

21.2 THE MORPHOLOGY OF GALAXIES 468
Spiral Galaxies
Elliptical Galaxies
Irregular Galaxies
S0 Galaxies
How Are the Forms of the Galaxies Explained?

21.3 THE DISTANCES OF THE GALAXIES 471
The Shaply-Curtis Debates of 1920
The Distance of the Great Galaxy in Andromeda
Other Distance Indicators for Galaxies
The Distances to Clusters of Galaxies
The Velocity-Distance Relationship
The Tully-Fisher Relation

21.4 GENERAL GALAXY ATTRIBUTES 477
Luminosity
Dimensions
Mass
Magnetic Fields

21.5 THE COLOR AND STELLAR CONTENT OF OTHER GALAXIES 479
Spiral Galaxies
Elliptical Galaxies
Irregular Galaxies

21.6 OUR NEIGHBORHOOD: THE LOCAL GROUP 480
Galaxies Gravitationally Bound to Ours

21.7 THE FORMATION AND EVOLUTION OF GALAXIES 482
The Importance of Density
Angular Momentum
The Effect of Magnetic Fields
Interactions between Galaxies in a Cluster
Differences between Spirals:
Supernova-Induced Star Formation

21.8 THE MASSES OF GALAXY CLUSTERS 486
Intergalactic Matter
Dark Matter

21.9 CLUSTERS OF CLUSTERS: SUPERCLUSTERS 487

21.10 CLUSTER AND SUPERCLUSTER FORMATION 490

□ DISCOVERY 21-1
DISTANCES THROUGHOUT THE UNIVERSE 491

CHAPTER 22
PECULIAR AND UNUSUAL EXTRAGALACTIC OBJECTS 496

22.1 PECULIAR-LOOKING GALAXIES 497

22.2 RADIO GALAXIES 499
Three Bright Radio Galaxies:
Cygnus A, Centaurus A, and M87
High-Resolution Observations of Radio Emission from Galaxies

22.3 SEYFERT GALAXIES AND OTHER ACTIVE GALAXIES 502

22.4 QUASARS 505
The Spectra, Distances, and Luminosities of Quasars
The Variability of Quasars
Other Perplexing Aspects of Quasars
Quasar Hypotheses and Speculations
Supermassive Black Holes
A Dissenting Viewpoint
Gravitational Redshifts?
Gravitational Lenses

□ DISCOVERY 22-1
MEASURING A QUASAR'S VELOCITY 512

- DISCOVERY 22-2
A SCALE MODEL OF DISTANCES
IN THE UNIVERSE 513

CHAPTER 23

THE ORIGIN AND EVOLUTION OF THE UNIVERSE 516

- 23.1 THE EXPANSION OF THE UNIVERSE 517
The Velocity-Distance Relationship
Consequences of the Hubble Law
- 23.2 THE BIG BANG 519
The Early Moments of the Universe
GUTs
Matter Finally Dominates over Radiation
Antimatter in the Universe
- 23.3 AN ALTERNATIVE TO
THE BIG BANG THEORY 524
The Steady-State Hypothesis
The Spatial Density of Galaxies
- 23.4 THE COSMIC BACKGROUND
RADIATION 525
The First Detection
The Uniformity of the Background Radiation
How Did the Galaxies Form?
- 23.5 THE FUTURE OF THE UNIVERSE 528
The Gravitational Deceleration of the Universe
The Amount of Mass in the Universe
Dark Matter
After Expansion—What?
A Cyclical Universe?
- 23.6 THE GEOMETRY OF SPACE AND THE
SHAPE OF THE UNIVERSE 531
What is Meant by Curved Space?
How Might We Measure the Curvature of Space?
- 23.7 THE INFLATIONARY COSMOLOGICAL
THEORY 534
- 23.8 THE HALLEY-OLBERS PARADOX 534
- DISCOVERY 23-1
THE AGE OF THE UNIVERSE 535
- DISCOVERY 23-2
THE EXPANSION OF THE UNIVERSE 536
- DISCOVERY 23-3
OBSERVING THE BACKGROUND
RADIATION 537

APPENDIX A

USEFUL MATHEMATICAL INFORMATION A1

1. The Powers of Ten Shorthand for Numbers
2. Some Useful Numbers
3. Relations between Units
4. Conversion between Units
5. Derivation of Angular Size Formula
6. Computing Random Errors
7. Why Bodies of Different Masses Fall at the Same Rate
8. Weight as the Force of Gravity
9. A Further Example of the Doppler Effect
10. Spectroscopic Parallaxes

APPENDIX B

CONSTELLATIONS A5

APPENDIX C

PROPERTIES OF PLANETS AND SATELLITES A6

APPENDIX D

THE 40 BRIGHTEST STARS A9

APPENDIX E

STARS NEARER THAN 4 PARSECS A10

APPENDIX F

THE LOCAL GROUP GALAXIES A11

APPENDIX G

STAR MAPS FOR THE NORTHERN HEMISPHERE A12

GLOSSARY G1
