

# The Fundamentals of Density Functional Theory

Von Prof. Dr. Helmut Eschrig

Technische Universität Dresden

B. G. Teubner Verlagsgesellschaft  
Stuttgart · Leipzig 1996

# Contents

<b>Introduction</b>	<b>9</b>
<b>Part I: NON-RELATIVISTIC THEORY</b>	<b>12</b>
<b>1 Many-Body Systems</b>	<b>13</b>
1.1 The Schrödinger Representation, $N$ Fixed	14
1.2 The Momentum Representation, $N$ Fixed	17
1.3 The Heisenberg Representation, $N$ Fixed	23
1.4 Hartree-Fock Theory	24
1.5 The Occupation Number Representation, $N$ Varying	29
1.6 Field Quantization	32
<b>2 Density Matrices and Density Operators</b>	<b>35</b>
2.1 Single-Particle Density Matrices	35
2.2 Two-Particle Density Matrices	37
2.3 Density Operators	40
2.4 Expectation Values and Density Matrices	42
2.5 The Exchange and Correlation Hole	47
2.6 The Adiabatic Principle	51
2.7 Coulomb Systems	54
<b>3 Thomas-Fermi Theory</b>	<b>60</b>
3.1 The Thomas-Fermi Functional and Thomas-Fermi Equation	61
3.2 The Thomas-Fermi Atom	66
3.3 The Thomas-Fermi Screening Length	68
3.4 Scaling Rules	69
3.5 Correction Terms	71
<b>4 Hohenberg-Kohn Theory</b>	<b>74</b>
4.1 The Basic Theorem by Hohenberg and Kohn	75
4.2 The Kohn-Sham Equation	79
4.3 The Link to the Hartree-Fock-Slater Approximation	82
4.4 Constrained Search Density Functionals	84
4.5 Ensemble State Density Functionals	85
4.6 Dependence on Particle Number $N$	90
4.7 Spin Polarization	95
<b>5 Legendre Transformation</b>	<b>99</b>
5.1 Elementary Introduction	100
5.2 Prelude on Topology	106

5.3	Prelude on Lebesgue Integral . . . . .	110
5.4	Banach Space . . . . .	113
5.5	Dual Space . . . . .	118
5.6	Conjugate Functionals . . . . .	120
5.7	The Functional Derivative . . . . .	122
5.8	Lagrange Multipliers . . . . .	124
<b>6</b>	<b>Density Functional Theory by Lieb</b>	<b>127</b>
6.1	Lieb's Density Functional . . . . .	128
6.2	Résumé so far . . . . .	131
6.3	Dependence on Particle Number $N$ . . . . .	134
6.4	The Kohn-Sham Equation . . . . .	140
<b>7</b>	<b>Approximative Variants</b>	<b>143</b>
7.1	The Homogeneous Electron Liquid . . . . .	144
7.2	The Local Density Approximation . . . . .	148
7.3	Generations of Kohn-Sham type equations . . . . .	152
7.4	The Self-Interaction Correction . . . . .	156
<b>Part II:</b>	<b>RELATIVISTIC THEORY</b>	<b>159</b>
<b>8</b>	<b>A Brief Introduction to Quantum Electrodynamics</b>	<b>160</b>
8.1	Classical Electrodynamics . . . . .	161
8.2	Lorentz Covariance . . . . .	162
8.3	Lagrange Formalism . . . . .	164
8.4	Relativistic Kinematics . . . . .	167
8.5	Relativistic Mechanics . . . . .	168
8.6	The Principles of Relativistic Quantum Theory . . . . .	169
8.7	The Dirac Field . . . . .	172
<b>9</b>	<b>Current Density Functional Theory</b>	<b>176</b>
9.1	QED Groundstate in a Static External Field . . . . .	177
9.2	Current Density Functionals and Kohn-Sham-Dirac Equation . . . . .	181
9.3	The Gordon Decomposition and Spin Density . . . . .	185
9.4	Approximative Variants . . . . .	188
9.5	The Variational Solution of the Kohn-Sham-Dirac Equation . . . . .	190
	<b>Bibliography</b>	<b>193</b>
	<b>Index</b>	<b>201</b>
