Contents

Preface	xiii
Part A: Placing Data in Context	1
1 Practical Data Analysis	3
1.1 Effect of factors	4
1.2 Nature of data	6
1.3 Summary tables	7
1.4 Plots for statistics	9
1.5 Computing	13
1.6 Interpretation	16
1.7 Problems	18
2 Collaboration in Science	21
2.1 Asking questions	22
2.2 Learning from plots	23
2.3 Mechanics of a consulting session	24
2.4 Philosophy and ethics	26
2.5 Intelligence, culture and learning	28
2.6 Writing	29
2.7 Problems	32
3 Experimental Design	35
3.1 Types of studies	35
3.2 Designed experiments	37
3.3 Design structure	38
3.4 Treatment structure	42
3.5 Designs in this book	43
3.6 Problems	44

Part B: Working with Groups of Data	47
4 Group Summaries	49
4.1 Graphical summaries	49
4.2 Estimates of means and variance	53
4.3 Assumptions and pivot statistics	58
4.4 Interval estimates of means	60
4.5 Testing hypotheses about means	63
4.6 Formal inference on the variance	65
4.7 Problems	67
5 Comparing Several Means	71
5.1 Linear contrasts of means	73
5.2 An overall test of difference	77
5.3 Partitioning sums of squares	78
5.4 Expected mean squares	81
5.5 Power and sample size	82
5.6 Problems	86
6 Multiple Comparisons of Means	89
6.1 Experiment- and comparison-wise error rates	89
6.2 Comparisons based on F tests	91
6.3 Comparisons based on range of means	97
6.4 Comparison of comparisons	100
6.5 Problems	103
Part C: Sorting out Effects with Data	105
7 Factorial Designs	107
7.1 Cell means models	107
7.2 Effects models	108
7.3 Estimable functions	110
7.4 Linear constraints	114
7.5 General form of estimable functions	117
7.6 Problems	124
8 Balanced Experiments	125
8.1 Additive models	125
8.2 Full models with two factors	129
8.3 Interaction plots	133
8.4 Higher-order models	139
8.5 Problems	142

9 Model Selection	145
9.1 Pooling interactions	145
9.2 Selecting the 'best' model	147
9.3 Model selection criteria	150
9.4 One observation per cell	151
9.5 Tukey's test for interaction	155
9.6 Problems	157
Part D: Dealing with Imbalance	159
10 Unbalanced Experiments	161
10.1 Unequal samples	161
10.2 Additive model	164
10.3 Types I, II, III and IV	167
10.4 Problems	175
11 Missing Cells	177
11.1 What are missing cells?	177
11.2 Connected cells and incomplete designs	180
11.3 Type IV comparisons	184
11.4 Latin square designs	187
11.5 Fractional factorial designs	189
11.6 Problems	193
12 Linear Models Inference	195
12.1 Matrix preliminaries	195
12.2 Ordinary least squares	196
12.3 Weighted least squares	197
12.4 Maximum likelihood	198
12.5 Restricted maximum likelihood	199
12.6 Inference for fixed effect models	200
12.7 Anova and regression models	202
12.8 Problems	205
Part E: Questioning Assumptions	207
13 Residual Plots	209
13.1 Departures from assumptions	210
13.2 Incorrect model	213
13.3 Correlated responses	215
13.4 Unequal variance	216
13.5 Non-normal data	216
13.6 Problems	219

14 Comparisons with Unequal Variance	221
14.1 Comparing means when variances are unequal	221
14.2 Weighted analysis of variance	222
14.3 Satterthwaite approximation	224
14.4 Generalized inference	225
14.5 Testing for unequal variances	226
14.6 Problems	227
15 Getting Free from Assumptions	229
15.1 Transforming data	229
15.2 Comparisons using ranks	234
15.3 Randomization	235
15.4 Monte Carlo methods	236
15.5 Problems	237
Part F: Regressing with Factors	239
16 Ordered Groups	241
16.1 Groups in a line	241
16.2 Testing for linearity	243
16.3 Path analysis diagrams	245
16.4 Regression calibration	248
16.5 Classical error in variables	250
16.6 Problems	252
17 Parallel Lines	255
17.1 Parallel lines model	256
17.2 Adjusted estimates	258
17.3 Plots with symbols	261
17.4 Sequential tests with multiple responses	263
17.5 Sequential tests with driving covariate	266
17.6 Adjusted (Type III) tests of hypotheses	268
17.7 Different slopes for different groups	269
17.8 Problems	274
18 Multiple Responses	275
18.1 Overall tests for group differences	276
18.2 Matrix analog to F test	283
18.3 How do groups differ?	284
18.4 Causal models	289
18.5 Problems	293

Part G: Deciding on Fixed or Random Effects	295
19 Models with Random Effects	297
19.1 Single-factor random model	298
19.2 Test for class variation	302
19.3 Distribution of sums of squares	304
19.4 Variance components	306
19.5 Grand mean	309
19.6 Problems	311
20 General Random Models	313
20.1 Two-factor random models	313
20.2 Unbalanced two-factor random model	318
20.3 General random model	322
20.4 Quadratic forms in random effects	323
20.5 Application to two-factor random model	324
20.6 Problems	326
21 Mixed Effects Models	327
21.1 Two-factor mixed models	327
21.2 General mixed models	330
21.3 Problems	332
Part H: Nesting Experimental Units	335
22 Nested Designs	337
22.1 Sub-sampling	338
22.2 Blocking	341
22.3 Nested and crossed factors	346
22.4 Nesting of fixed effects	348
22.5 Nesting of random effects	350
22.6 Problems	354
23 Split Plot Design	357
23.1 Several views of split plot	357
23.2 Split plot model	361
23.3 Contrasts in a split plot	365
23.4 Problems	367

24 General Nested Designs	369
24.1 Extensions of split plot	369
24.2 Strip plot	372
24.3 Imbalance in nested designs	373
24.4 Covariates in nested designs	374
24.5 Explained variation in nested designs	377
24.6 Problems	378
Part I: Repeating Measures on Subjects	381
25 Repeated Measures as Split Plot	383
25.1 Repeated measures designs	383
25.2 Repeated measures model	386
25.3 Split plot more or less	388
25.4 Expected mean squares under sphericity	390
25.5 Contrasts under sphericity	394
25.6 Problems	396
26 Adjustments for Correlation	399
26.1 Adjustments to split plot	399
26.2 Contrasts over time	402
26.3 Multivariate repeated measures	405
26.4 Problems	408
27 Cross-over Design	411
27.1 Cross-over model	412
27.2 Confounding in cross-over designs	413
27.3 Partition of sum of squares	415
27.4 Replicated Latin square design	416
27.5 General cross-over designs	418
27.6 Problems	419
References	423
Index	430
