Contents

List of Contributors vii
Preface ix

Chapter 1 **Active Layer Formation by Ion Implantation**

M. Kuzuhara and T. Nozaki

List of Symbols 1
I. Introduction 2
II. Furnace Annealing 3
III. Rapid Thermal Annealing 25
References 58

Chapter 2 **Focused Ion Beam Implantation Technology**

H. Hashimoto

I. Introduction 63
II. Implanter 64
III. FIB Implants 71
IV. Compositional Disordering of GaAs–AlGaAs 82
V. FIB-Doping MBE Growth 85
VI. Prospect of FIB Technology 93
References 95

Chapter 3 **Device Fabrication Process Technology**

T. Nozaki and A. Higashisaka

I. Introduction 97
II. Fundamental Process Technologies 99
III. Self-Aligned MESFET Technology 114
IV. Device Technology Effective for Improving Characteristics in Submicron Gate MESFETs 131
V. Summary 153
References 155

Chapter 4 **GaAs LSI Circuit Design**

M. Ino and T. Takada

I. Introduction 160
II. Device Analysis 160
III. FET Model 170
IV. Other Elements 187
V. Basic Circuit Configurations 190
VI. LSI Design 202
VII. Testing Technology 223
VIII. Summary 230
References 230

Chapter 5 **GaAs LSI Fabrication and Performance**

M. Hirayama, M. Ohmori, and K. Yamasaki

I. Introduction 234
II. Characterization of Semi-insulating GaAs Wafers for IC Application . . 238
III. TEG Selection for LSI Fabrication Process and Chip/Wafer Layout . . 245
IV. FET Fabrication and Performance for LSIs 251
V. Circuit Elements and Interconnection. 276
VI. Assembly Techniques and Packaging 283
VII. LSI Fabrication and Performance 287
VIII. Summary and Future Trends 300
References 301
