Krzysztof Gałkowski

State-space Realisations of Linear 2-D Systems with Extensions to the General nD (n>2) Case

Springer

Table of Contents

Notation xi

1. Introduction 1

2. Preliminaries 5

2.1 State-space Models 5

2.2 Transfer Function Matrices and Polynomial Description 9

2.3 The Gałkowski Approach – the SISO Case 12

2.4 Singularity 13

3. The Elementary Operation Algorithm for Polynomial Matrices 17

3.1 Basics 17

3.2 Analysis of the Elementary Operation Algorithm 28

3.2.1 The EOA and Polynomial Matrix Description 28

3.2.2 The EOA and Similarity 30

3.3 The Elementary Operation Algorithm and Singularity 33

3.4 Initial Representations for the Elementary Operation Algorithm 39

3.5 Relationships between the Roesser and the Fornasini-Marchesini Models 56

4. 2D State-space Realizations and the Elementary Operation Algorithm – the Single Input - Single Output (SISO) Case 65

4.1 Basics 65
4.2 Links between the Roesser and Fornasini-Marchesini Models by the EOA 84

5. MIMO Systems – the 1D Case 91
5.1 Multi-input Single-output Systems 93
5.2 Single-input Multi-output Systems 95
5.3 MISO and SIMO Cases–the Dual Approach 101
5.4 General MIMO Case 106
5.5 Further Analysis 113
5.4 An Algebraic Characterization 122

6. Multiple-input, Multiple-output (MIMO) Systems – the 2D Case 125
6.1 The General Approach 125
6.1.1 Column Least Common Multiplicity Based Approach 126
6.1.2 Row Least Common Multiplicity Based Approach 132
6.1.3 A Standard (Nonsingular) Realization Achieved by Direct Application of the EOA 136
6.2 Algebraic Justification for the MIMO Case 143
6.3 Variable Transformations for the Elementary Operation Algorithm 146
6.3.1 Variable Inversion 146
6.3.2 Generalised Bilinear Transform 152

7. The Elementary Operation Approach Extensions 167
7.1 The nD Elementary Operation Algorithm 167
7.2 Applications to Repetitive Processes 177
7.3 The Elementary Operation Algorithm and Laurent Polynomials 182

8. State-Space Realizations for 2D/nD Systems Revisited – Relations to EOA 187
8.1 Overview 187
8.2 *A priori* Non-minimal Realization 198
8.3 Multi-way Companion Matrices 204
8.3.1 The History of Multi-way Matrices 204

8.3.2 Multi-way Matrices - Mathematical Basics 205
8.3.3 Three-way Companion Matrix of a Trivariate Polynomial 207
8.4 Minimal Realization for Multi-linear n-variate Transfer Functions 209

9. Conclusions and Further Work 219
