P. Colinet, J.C. Legros, M.G. Velarde

Nonlinear Dynamics of Surface-Tension-Driven Instabilities

With a Foreword by I. Prigogine

WILEY-VCH

Berlin · Weinheim · New York · Chichester · Brisbane · Singapore · Toronto

Contents

Preface XI

Preamble XIII

1 Introduction 1
- 1.1 Equilibrium versus non-equilibrium states and instability phenomena 1
- 1.2 Phenomenology of surface-tension-driven instabilities 6
- 1.3 Mathematical description of bifurcation phenomena 10
- 1.4 Application-oriented aspects 12

2 Balance equations and boundary conditions 15
- 2.1 Thermo-Hydrodynamic equations 15
  - 2.1.1 Mass conservation and continuity equation 15
  - 2.1.2 Momentum balance 16
  - 2.1.3 Energy conservation 17
  - 2.1.4 Multicomponent liquids 18
  - 2.1.5 Entropy balance 21
  - 2.1.6 Generalized forces and fluxes – Phenomenological relations 22
- 2.2 Boundary conditions 30
  - 2.2.1 Non-deformable plane boundaries 30
  - 2.2.2 Deformable fluid interfaces 32

3 Instability modes in Bénard layers 39
- 3.1 Reference states and small perturbations 39
  - 3.1.1 Rayleigh–Bénard instability – time scales 40
  - 3.1.2 Dynamics of fluctuations in an infinite stratified medium 43
  - 3.1.3 Rayleigh–Bénard instability of a fluid confined between stress-free boundaries 46
  - 3.1.4 The Boussinesq approximation 49
- 3.2 Dimensionless parameters and equations 54
  - 3.2.1 Dimensionless parameters 54
  - 3.2.2 Dimensionless equations 57
  - 3.2.3 Dimensionless boundary conditions 59
- 3.3 Monotonic modes in one-layer systems 63
  - 3.3.1 Rayleigh–Bénard Instability 63

3.3.2 Marangoni–Bénard Instability . . . 69
3.3.3 Combined Rayleigh–Marangoni–Bénard instability . . . 74
3.3.4 Influence of lateral confinement . . . 76
3.4 Wave modes in one-layer systems . . . 84
3.4.1 General dispersion relation . . . 85
3.4.2 Asymptotic analysis – Internal and surface waves . . . 90
3.4.3 General features of mode-mixing phenomena . . . 92
3.4.4 Some hints for experiments . . . 92
3.5 Two-layer systems . . . 93
3.5.1 Infinitely deep layers – Short-wavelength analysis . . . 95
3.5.2 Finite depth effects – General case . . . 104
3.6 Influence of surface deformation . . . 111
3.6.1 One-layer systems . . . 111
3.6.2 Two-layer systems . . . 123
3.7 Two-component one-layer systems . . . 126
3.7.1 Neutral stability . . . 127
3.7.2 Oscillatory modes and complete stability diagrams . . . 129
3.7.3 Physical mechanisms and heuristic arguments . . . 130
3.8 Influence of evaporation . . . 132
3.8.1 Non-equilibrium effects . . . 133
3.8.2 Rate of evaporation in the reference state . . . 135
3.8.3 Stability of the reference solution . . . 140

4 Weakly nonlinear pattern dynamics 149
4.1 Scope of nonlinear theories . . . 149
4.1.1 Saturation of exponential growth – Landau's theory – Normal forms . 151
4.1.2 Orientational degeneracy – Rolls/Rhombs competition . . . 154
4.1.3 Sideband degeneracy – Modulation effects and envelope equations . . 161
4.2 Derivation of amplitude equations . . . 171
4.2.1 Symmetries and amplitude equations . . . 171
4.2.2 Perturbation methods – Coefficients of amplitude equations . . . 184
4.2.3 Projection methods – Galerkin–Eckhaus expansions . . . 194
4.2.4 General non-resonant pattern selection problem . . . 198
4.3 Pattern selection in Bénard instabilities . . . 203
4.3.1 Mean field dynamics . . . 205
4.3.2 Vertical vorticity . . . 207
4.3.3 Definition of linear and nonlinear operators . . . 207
4.3.4 Coefficients for the Rayleigh–Bénard instability . . . 208
4.3.5 Self-adjointness, resonances and hexagonal patterns in Bénard problems 211
4.4 Pattern selection in Rayleigh–Marangoni instabilities . . . 212
4.4.1 Nonlinear energy stability theory . . . 213
4.4.2 Hexagonal patterns in the Rayleigh–Marangoni instability . . . 214
4.4.3 Rolls, squares and hexagons . . . 223
4.5 Imperfect patterns . . . 236
4.5.1 Amplitude equations for modulated hexagonal patterns . . . 236

4.5.2 Coefficients for long-wave Bénard instabilities 238
4.5.3 Phase dynamics and Busse balloon of hexagonal patterns 241
4.5.4 Non-variational dynamics of pentagon-heptagon defects 247
4.5.5 Rotationally invariant formulations 257
4.5.6 Low Prandtl number fluids, spiral patterns and inertial convection . . 263
4.6 Long-wave convection patterns 269
4.6.1 Long-wave expansions, conservation laws and symmetries 270
4.6.2 Non-Boussinesq Rayleigh–Marangoni–Bénard convection 272
4.6.3 Long-wave surface deformational modes 277
4.6.4 Interaction between deformational and cellular convection modes . . 279

5 Weakly nonlinear waves **285**
5.1 Hopf bifurcation with finite wavenumber 286
5.1.1 Two-dimensional waves (traveling and standing waves) 286
5.1.2 Three-dimensional waves – Amplitude equations coefficients 288
5.1.3 Mean-flow and vertical vorticity 295
5.2 Weakly nonlinear internal and surface waves 297
5.2.1 Two-dimensional waves 297
5.2.2 Three-dimensional waves 299
5.3 Double-diffusive oscillatory Marangoni convection 302
5.3.1 Two-dimensional waves 303
5.3.2 Three-dimensional waves 303
5.3.3 Strong resonance and/or small frequency limitations 307
5.4 Two-layer Rayleigh–Bénard instability 312
5.4.1 Thermal versus mechanical coupling 313
5.4.2 Galerkin method 315
5.4.3 Linear stability results 319
5.4.4 Weakly nonlinear analysis 322
5.4.5 Numerical results 325
5.4.6 Three-dimensional case and Takens–Bogdanov dynamics 329
5.5 Modulations of two-dimensional waves 333
5.5.1 Ginzburg–Landau equations for traveling waves 333
5.5.2 Traveling and standing waves – group velocity effects 335
5.5.3 Influence of lateral boundaries and defects 336
5.5.4 Phase instabilities of traveling waves 340
5.5.5 Phase instabilities of standing waves 342
5.5.6 Eckhaus instability of traveling waves 346
5.5.7 Phase turbulence of traveling waves 353

6 Solitonic and shock-like waves **355**
6.1 Some experimental findings 356
6.2 Dissipative Korteweg–de Vries description of transverse waves 361
6.3 Dilational shock-like longitudinal waves 370
6.3.1 Linear stability analysis and scalings 371
6.3.2 Separation of time scales 376

6.3.3 Nonlinear wave-packets 376

7 Codimension-two bifurcations **383**
7.1 Spatially resonant patterns in confined geometries 384
7.1.1 Problem statement and linear stability results 385
7.1.2 Nonlinear regimes for $a = 2.5$ 387
7.1.3 Summary and discussion 392
7.2 Strong spatial resonances between waves and patterns 394
7.2.1 Derivation of the form of amplitude equations from symmetry properties 395
7.2.2 Coefficients for the two-layer Bénard instability 396
7.2.3 Results and discussion 398

8 Strongly nonlinear regimes **411**
8.1 Finite-amplitude regimes of thermocapillary convection 412
8.1.1 Linear results 413
8.1.2 Problem formulation – Extrapolation of Landau equations 414
8.1.3 Numerical results, mean-field approximation and physical interpretations 420
8.1.4 Steady states at high Marangoni number 425
8.1.5 Comparison with full numerical simulations 429
8.1.6 Extrapolation of the model at higher Marangoni number 431
8.2 Modeling of highly viscous interfacial turbulence 432

A Basic definitions and transport theorems **443**
A.1 Particle paths, velocity and material derivative 443
A.2 Streamlines 444
A.3 Streaklines 444
A.4 Compressibility 444
A.5 Reynolds' Transport Theorem 445
A.6 Deformation and rate of strain 445

B Self-adjointness and oscillatory modes **447**

C Linear energy stability and variational principles **451**

D Adjoint problems for Rayleigh–Marangoni–Bénard instabilities **453**
D.1 One-layer Rayleigh–Marangoni–Bénard instability 453
D.2 Two-layer Rayleigh–Marangoni–Bénard instability 455

E Fredholm solvability condition **457**

F Energy stability theory for the Marangoni–Bénard problem **461**

G Amplitude equation coefficients for the two-layer Rayleigh–Bénard problem **463**

H Extrapolation of amplitude equations **467**
H.1 Derivation of model cubic amplitude equations 467
H.2 Solution of the linear problem 468
H.3 Calculation of the mean temperature profile 470

Bibliography **471**

Index **505**
