New York / Chichester / Brisbane / Toronto / Singapore

CONTENTS

| | | |
|------------------|--|-----------|
| CHAPTER 1 | HISTORICAL INTRODUCTION | 1 |
| | 1.1. The Eye as a Detector | 1 |
| | 1.2. Thermal Detectors | 5 |
| | 1.3. Photographic Detection | 8 |
| | 1.4. Photoelectric Detection | 9 |
| | 1.4.1. The Hallwachs Effect | 10 |
| | 1.4.2. The Work of Elster and Geitel | 11 |
| | 1.4.3. Photocurrent Amplification | 12 |
| | 1.5. Photoconductive Detectors | 13 |
| | 1.6. Photovoltaic Detection | 15 |
| | 1.7. The Development of Wavelength Standards | 16 |
| | 1.8. Selection of the Appropriate Spectroscopic Approach | 18 |
| | 1.9. The Goals of Spectroscopic Research | 21 |
| | Appendix 1A | 26 |
| | Appendix 1B | 27 |
| | References | 29 |
| | | |
| CHAPTER 2 | PRINCIPLES OF OPTICS AND RADIOMETRY | 33 |
| | 2.1. Light and Its Measurement | 33 |
| | 2.2. Introductory Geometric Optics | 37 |
| | 2.2.1. Prisms | 40 |
| | 2.2.2. Lenses | 45 |
| | 2.2.3. Conservation of Radiance | 51 |
| | 2.2.4. Mirrors | 52 |
| | 2.3. Simple Optical Systems | 56 |
| | 2.3.1. Thick Lenses | 57 |
| | 2.3.2. Two Thin Lenses | 61 |

| | |
|--|-----------|
| 2.3.3. Limiting Apertures | 62 |
| 2.3.4. Light-Gathering Power | 66 |
| 2.3.5. Distortion | 67 |
| References | 67 |
| CHAPTER 3 PRINCIPLES OF DIFFRACTION | 69 |
| 3.1. Properties of Waves | 69 |
| 3.2. Diffraction | 72 |
| 3.3. Resolving Power | 78 |
| 3.4. Diffraction Gratings | 80 |
| References | 98 |
| CHAPTER 4 SPECTROGRAPHS AND SPECTROMETERS | 99 |
| 4.1. Fundamental Principles | 102 |
| 4.1.1. Dispersion | 103 |
| 4.1.2. Resolving Power | 107 |
| 4.1.3. Spectral Bandwidth | 109 |
| 4.1.4. Speed | 111 |
| 4.1.5. Factors Governing the Transmission of Radiant Energy through a Spectroscopic System | 112 |
| 4.1.6. Grating Efficiency | 114 |
| 4.1.7. Holographic Gratings | 116 |
| 4.1.8. Free Spectral Range | 118 |
| 4.2. Plane Grating Instruments | 119 |
| 4.3. Echelle Systems | 125 |
| 4.4. Concave Grating Mountings | 129 |
| 4.4.1. Rowland Mounting | 131 |
| 4.4.2. Abney Mounting | 131 |
| 4.4.3. Paschen–Runge Mounting | 132 |
| 4.4.4. Eagle Mounting | 133 |
| 4.4.5. Wadsworth Mounting | 134 |
| 4.4.6. Selecting a Mounting | 135 |
| 4.5. Spectrometer Illumination | 135 |
| 4.6. Types of Slit Illumination | 137 |
| 4.6.1. Use of a Single Condensing Lens or Mirror | 139 |

| | |
|--|------------|
| 4.6.2. Uniform Slit Illumination | 140 |
| 4.6.3. Use of Cylindrical Lenses | 142 |
| References | 145 |
| CHAPTER 5 DISPERSIVE SPECTROMETERS THAT USE MASKS | 147 |
| 5.1. Limitations of Conventional Spectrometers | 147 |
| 5.1.1. Optical Throughput and Resolution | 149 |
| 5.1.2. Signal-to-Noise Ratio and Scanning Time | 150 |
| 5.2. Monochromators with Multiple Slits | 150 |
| 5.2.1. Monochromatic Incident Radiation | 150 |
| 5.2.2. Jacquinot's Advantage | 152 |
| 5.2.3. Polychromatic Incident Radiation | 152 |
| 5.2.4. Golay's Dynamic Multislit Spectrometer | 156 |
| 5.2.5. Golay's Static Multislit Spectrometer | 161 |
| 5.2.6. Girard's Grill Spectrometer | 164 |
| 5.2.7. Other Dispersive Spectrometers with Jacquinot's Advantage | 167 |
| 5.3. Multiplexing | 170 |
| 5.3.1. Conventional, One-at-a-Time Weighing | 170 |
| 5.3.2. Multiple Weighings Using the Same Balance | 171 |
| 5.3.3. Multiple Balances | 172 |
| 5.3.4. Using the Weights in Combination: The Single-Balance, Single-Pan Design | 174 |
| 5.3.5. Using the Weights in Combination: The Single-Balance, Double-Pan Design | 175 |
| 5.4. Selecting the Best Multiplexing Design | 176 |
| 5.4.1. The W -Matrix | 176 |
| 5.4.2. The Hadamard Matrix | 177 |
| 5.4.3. The S -Matrix | 178 |
| 5.4.4. Fellgett's Advantage | 179 |
| 5.5. Hadamard Transform Spectrometers | 180 |
| 5.5.1. The Mask | 182 |
| 5.5.2. The Processor | 185 |
| 5.5.3. Two-Dimensional Encoding Masks | 188 |

| | |
|---|------------|
| 5.5.4. Two-Detector Designs | 193 |
| 5.5.5. Doubly Encoded HT Spectrometers | 195 |
| 5.6. Noise Considerations | 200 |
| 5.6.1. The Origins of Noise | 200 |
| 5.6.2. Photon Shot-Limited Noise | 201 |
| 5.6.3. Detector-Limited Noise | 201 |
| 5.6.4. Fluctuation (Flicker, $1/f$, Proportional, or Scintillation) Noise | 202 |
| 5.6.5. Multichannel Advantages | 202 |
| References | 205 |
| CHAPTER 6 PRINCIPLES OF INTERFERENCE | 209 |
| 6.1. Limitations of Spectrometers That Use Masks | 209 |
| 6.2. Spectrometers That Use Interference | 210 |
| 6.3. The Principle of Superposition | 211 |
| 6.4. The Principle of Coherence | 218 |
| 6.5. The Interference Pattern | 220 |
| 6.6. Interference by Division of Wavefront: The Double-Slit Experiment | 223 |
| 6.6.1. Position of the Interference Fringes | 225 |
| 6.6.2. Intensity Variations in the Interference Fringes | 225 |
| 6.6.3. Effect of Slit Width | 227 |
| 6.6.4. Polychromatic Sources | 230 |
| 6.6.5. The Rayleigh Interferometer | 231 |
| 6.7. Other Methods of Wavefront Division | 232 |
| 6.7.1. Dual Prisms | 232 |
| 6.7.2. Split Lenses | 233 |
| 6.7.3. Mirrors | 234 |
| 6.8. Interference by Division of Amplitude | 235 |
| 6.8.1. The Principle of Reversibility | 236 |
| 6.8.2. Division of Amplitude at Parallel Surfaces | 237 |
| 6.8.3. Interference Involving Multiple Reflections | 239 |
| 6.8.4. Fringes of Equal Thickness | 244 |

| | |
|---------------------------------------|-----|
| 6.8.5. Fringes of Equal Inclination | 247 |
| 6.8.6. The Fabry–Perot Interferometer | 248 |
| 6.8.7. Interference Filters | 252 |
| References | 253 |

| | | |
|------------------|---|------------|
| CHAPTER 7 | INTRODUCTION TO FOURIER TRANSFORM SPECTROSCOPY | 255 |
| 7.1. | The Michelson Interferometer | 255 |
| 7.1.1. | Interferometer Design | 256 |
| 7.1.2. | The Interferogram | 257 |
| 7.1.3. | Resolution | 260 |
| 7.1.4. | Throughput | 261 |
| 7.1.5. | Sensitivity | 262 |
| 7.2. | Fourier Transform Spectroscopy: A Historical Perspective | 262 |
| 7.3. | Fourier Transformation: A Mathematical Introduction | 278 |
| 7.3.1. | Transform Analysis | 279 |
| 7.3.2. | The Fourier Transform | 280 |
| 7.3.3. | Terms in the Fourier Transform | 285 |
| 7.4. | Spectral Line Shapes and Their Interferograms: Some Useful Fourier Transform Pairs | 290 |
| 7.4.1. | The Delta Function | 290 |
| 7.4.2. | The Boxcar Function | 297 |
| 7.4.3. | Gaussian and Lorentzian Profiles | 298 |
| 7.5. | Properties of the Fourier Transform | 301 |
| 7.5.1. | Symmetry | 301 |
| 7.5.2. | Linearity | 301 |
| 7.5.3. | Scaling | 301 |
| 7.5.4. | Shifting | 304 |
| 7.5.5. | Convolution | 304 |
| 7.6. | Some Fundamental Physical Limitations | 306 |
| 7.6.1. | Finite Optical Path Difference | 307 |
| 7.6.2. | Sampling | 312 |
| 7.6.3. | Beam Divergence | 318 |
| | References | 321 |

| | | |
|-------------------|---|------------|
| CHAPTER 8 | PRINCIPLES OF PHOTOGRAPHIC DETECTION | 327 |
| | 8.1. The Photographic Process | 328 |
| | 8.2. Response of the Emulsion to Light | 330 |
| | 8.3. Miscellaneous Emulsion Properties | 332 |
| | 8.4. Photographic Photometry in Spectrochemical Analysis | 335 |
| | 8.4.1. Methods for Producing a Graded Series of Exposures | 335 |
| | 8.4.2. Photometric Procedure | 337 |
| | References | 342 |
| | | |
| CHAPTER 9 | INTRODUCTION TO PHOTOELECTRONIC DETECTION | 345 |
| | 9.1. Classification of Detector Types | 346 |
| | 9.2. Introduction to Solid-State Chemistry | 347 |
| | 9.2.1. Band Theory of Solids | 347 |
| | 9.2.2. Semiconductors | 348 |
| | 9.2.3. The <i>pn</i> Junction | 349 |
| | 9.3. Principles of Photon Detection | 354 |
| | 9.3.1. The External Photoelectric Effect | 355 |
| | 9.3.2. The Internal Photoelectric Effect | 356 |
| | 9.4. Noise in the Detection Process | 364 |
| | 9.4.1. Types of Noise | 364 |
| | 9.4.2. Characteristics of Noise | 367 |
| | 9.5. Detector Performance Parameters | 369 |
| | 9.5.1. Responsivity | 371 |
| | 9.5.2. Noise Equivalent Power | 373 |
| | 9.5.3. Detectivity | 374 |
| | Appendix 9A | 375 |
| | References | 377 |
| | | |
| CHAPTER 10 | INTRODUCTION TO IMAGE DETECTORS | 379 |
| | 10.1. The Development of Image Detectors | 379 |
| | 10.2. Electron Multiplier | 386 |

| | |
|--|-----|
| 10.3. Electron Optics | 392 |
| 10.3.1. The Electron Lens | 392 |
| 10.3.2. The Electrostatic Image Lens | 395 |
| 10.3.3. Magnetic Focusing | 396 |
| 10.3.4. Proximity Focusing | 400 |
| 10.3.5. Electron Deflection and Raster Scanning | 400 |
| 10.4. Microchannel Plates | 403 |
| 10.5. Spectroscopic Interlude | 407 |
| 10.6. Signal-Generating Image Devices | 409 |
| 10.6.1. The Image Dissector | 410 |
| 10.6.2. Charge Storage Tubes | 412 |
| 10.6.3. Image Orthicon | 414 |
| 10.6.4. Image Isocon | 416 |
| 10.6.5. Secondary-Electron Conduction Camera Tubes | 418 |
| References | 421 |

CHAPTER 11 SOLID-STATE IMAGE DETECTORS 423

| | |
|---|-----|
| 11.1. Performance Characteristics of Image Detectors | 424 |
| 11.1.1. Pixel | 424 |
| 11.1.2. Fixed-Pattern Noise | 424 |
| 11.1.3. Transfer Characteristic | 425 |
| 11.1.4. Dynamic Range | 426 |
| 11.1.5. Lag | 426 |
| 11.1.6. Blooming | 427 |
| 11.1.7. Integration Time | 427 |
| 11.1.8. Resolution | 428 |
| 11.2. Specifying Image Detector Resolution in Spectroscopy | 432 |
| 11.2.1. Rayleigh Criterion and the Modulation Transfer Function | 432 |
| 11.2.2. Aliasing | 434 |
| 11.3. The Importance of Dynamic Range in Spectroscopy | 435 |

| | |
|---|-----|
| 11.4. Silicon Vidicon Detectors | 437 |
| 11.4.1. Fabrication of the Silicon Vidicon | 437 |
| 11.4.2. Principle of Operation | 439 |
| 11.4.3. Electron-Bombardment-Induced Response | 441 |
| 11.4.4. Development of Cascade Image Intensifiers | 443 |
| 11.4.5. The Intensified SIT Tube | 447 |
| 11.4.6. Performance Characteristics of the SIT and ISIT Detectors | 447 |
| 11.5. Photodiode Array Detectors | 452 |
| 11.5.1. Morphology of the Photodiode Array | 453 |
| 11.5.2. Principle of Operation | 455 |
| 11.5.3. Performance Characteristics | 458 |
| 11.5.4. Intensified Photodiode Arrays | 461 |
| 11.6. Charge Transfer Devices | 462 |
| 11.6.1. Introduction to MOS Technology | 464 |
| 11.6.2. Implementation of Charge Transfer | 469 |
| 11.6.3. Morphology of the Charge Transfer Device | 471 |
| 11.6.4. Charge Readout | 475 |
| 11.6.5. Charge Injection Devices | 479 |
| 11.6.6. Performance Characteristics of Charge Transfer Devices | 486 |
| References | 487 |

| | | |
|---|--|------------|
| CHAPTER 12 | SYSTEMS APPROACH TO THE DESIGN OF INSTRUMENTS FOR MULTIELEMENT ANALYSIS | 491 |
| 12.1. Basic Philosophy of Instrument Development | | 493 |
| 12.2. Introductory Systems Engineering | | 493 |
| 12.2.1. Subsystems and Components | | 494 |
| 12.2.2. Factors Involved in Design Selection | | 494 |
| 12.2.3. Optimal Design and Suboptimization | | 496 |
| 12.2.4. System Requirements, Imposed Constraints, and Design Objectives | | 498 |

| | |
|---|------------|
| 12.2.5. Instrument Development and Design Flow | 499 |
| 12.3. The Evolution of Analytical Technology | 502 |
| 12.4. The Need for Multielement Analysis | 503 |
| 12.5. The Ultimate System | 504 |
| 12.5.1. Wavelength Coverage | 505 |
| 12.5.2. System Resolution | 505 |
| 12.5.3. Dynamic Range | 506 |
| 12.5.4. Efficiency | 506 |
| 12.5.5. Sensitivity | 507 |
| 12.5.6. Flexibility | 507 |
| 12.5.7. Speed | 508 |
| 12.5.8. Reliability | 508 |
| 12.5.9. Possible Configurations | 508 |
| References | 509 |
| | |
| CHAPTER 13 INTRODUCTION TO ANALYTICAL ATOMIC SPECTROSCOPY | 511 |
| 13.1. Atomic Emission | 511 |
| 13.1.1. The Function of the Atom Reservoir | 513 |
| 13.1.2. The Function of the Wavelength Selector | 515 |
| 13.2. Atomic Absorption | 515 |
| 13.2.1. Source Requirements | 516 |
| 13.2.2. The Role of Chopping | 517 |
| 13.2.3. The Function of the Atom Reservoir and Wavelength Selector | 518 |
| 13.2.4. Sources for Simultaneous Multielement Analysis | 519 |
| 13.3. Atomic Fluorescence | 522 |
| 13.3.1. Source Requirements | 523 |
| 13.3.2. The Atom Reservoir and Wavelength Selector | 525 |
| 13.4. The Role of Noise in Spectroscopic Systems | 527 |
| 13.4.1. Flicker Noise | 527 |
| 13.4.2. Photon Shot Noise | 530 |
| 13.4.3. Detector Noise | 531 |

| | |
|---|------------|
| 13.5. The Role of Modulation in Noise Reduction | 534 |
| 13.5.1. Demodulation | 537 |
| 13.5.2. Benefits of Modulation | 538 |
| References | 540 |
| | |
| CHAPTER 14 SURVEY OF TRANSFORM SPECTROMETRIC SYSTEMS | 543 |
| 14.1. Choice of Spectrometric System | 543 |
| 14.1.1. Signal-to-Noise Ratio | 544 |
| 14.1.2. Resolution | 552 |
| 14.1.3. Spectral Range | 553 |
| 14.1.4. Multiplex Number | 554 |
| 14.1.5. Throughput | 554 |
| 14.1.6. Computational Requirements | 554 |
| 14.1.7. Construction | 555 |
| 14.1.8. Spectral Manipulation | 555 |
| 14.2. Fourier Transform Spectrometers | 557 |
| 14.2.1. Early FT Applications in UV-Visible Spectroscopy | 557 |
| 14.2.2. FT Applications in the UV-Visible: Horlick and Co-workers | 560 |
| 14.2.3. FT Applications in the UV-Visible: Faires and Co-workers | 568 |
| 14.2.4. Other FT Applications in the UV-Visible | 572 |
| 14.3. Hadamard Transform Spectrometers | 576 |
| 14.3.1. Early Hadamard Spectrometers for UV-Visible Spectroscopy | 577 |
| 14.3.2. Stationary Hadamard Encoding Masks | 577 |
| 14.3.3. A Visible-Near Infrared HT Spectrometer with a Stationary Liquid Crystal Mask | 581 |
| 14.4. Effect of Multiplexing on Noise: Some Experimental Results | 583 |
| 14.5. Conclusions | 598 |
| References | 601 |

| | | |
|-------------------|--|------------|
| CHAPTER 15 | NONTRANSFORM DETECTION SYSTEMS | 607 |
| 15.1. | Time Division Multiplexing | 608 |
| 15.2. | Information Transmission | 609 |
| 15.3. | Time Division Multiplexing in Analytical Spectroscopy | 611 |
| 15.4. | Nondispersive Time-Multiplexed Systems | 612 |
| 15.5. | Dispersive Time-Multiplexed Systems | 618 |
| 15.6. | Programmed-Scan Dispersive Systems | 622 |
| | 15.6.1. Computer-controlled Mono- chromators | 623 |
| | 15.6.2. Multislit Systems | 627 |
| 15.7. | Electronically Scanned Time-Multiplexed Systems | 633 |
| 15.8. | Nondispersive Multichannel Atomic Absorption | 637 |
| 15.9. | Direct-Reading Spectrometers | 638 |
| 15.10. | Image Detector Spectrometers | 644 |
| | 15.10.1. Imaging Spectrometers with Single Entrance Slits | 645 |
| | 15.10.2. Multiple-Entrance-Slit Imaging Spectrometers | 650 |
| 15.11. | Quo Vadimus? | 661 |
| | References | 663 |
| INDEX | | 667 |
