On Einstein's Path

Essays in Honor of Engelbert Schucking

With 11 Illustrations

Springer

Contents

Preface v

Contributors xix

1 Jordan, Pauli, Politics, Brecht ... and a Variable Gravitational Constant 1
Engelbert L. Schucking

2 Thomson Scattering in an Expanding Universe 15
James L. Anderson
2.1 Introduction 15
2.2 EIH Surface Integrals 16
2.3 Approximation Procedures 17
2.4 Thomson Scattering 19

3 Geometrical Formulation of Quantum Mechanics 23
Abhay Ashtekar, Troy A. Schilling
3.1 Introduction 23
3.2 Geometric Formulation of Quantum Mechanics 28
3.2.1 The Hilbert Space as a Kähler Space 28
3.2.2 The Quantum Phase Space 32
3.2.3 Riemannian Geometry and Measurement Theory . . . 35
3.2.4 The Postulates of Quantum Mechanics 42
3.3 A Unified Framework for Generalizations of Quantum Mechanics 44
3.3.1 Generalized Dynamics 45
3.3.2 Characterization of the Standard Quantum Kinematics . 49
3.4 Semiclassical Considerations 53
3.4.1 Kinematics 53
3.4.2 Dynamics: Oscillators 57

3.4.3 Dynamics: WKB Approximation 58
3.5 Discussion 61

4 General Covariance is Bose-Einstein Statistics **67**
James Baugh, David Ritz Finkelstein, Heinrich Saller, Zhong Tang
4.1 Quantum Relativity 67
4.2 General Covariance and Bosonic Statistics 68
4.3 The Two-Point Paradox 69
4.4 The Quantum Causal Relation 70
4.5 Quantum is Simpler 71
4.6 Limits to Spacetime 72
4.7 The Elephantine Chronon 73
4.8 Topological Nature of Gauge 73
4.9 Paradox Lost 75
4.10 Summation 79

5 The Split and Propagation of Light Rays in Relativity **81**
Stanisław L. Bażański
5.1 Introduction 81
5.2 Traditional Approach 81
5.3 Modified Approach 85
5.4 Sagnac-Like Effects 87
5.5 Examples 89

6 How to Define a Unique Vacuum in Cosmology **95**
Lluís Bel
6.1 Klein–Gordon Equation 95
6.2 Quantization of a Scalar Field 96
6.3 Robertson–Walker Models 97
6.4 Modes 97
6.5 Reduction of the Evolution Equation 98
6.6 Approximations to the Regular Solutions 99
6.7 Critical Points at $t = \infty$ 101
6.8 Special Cases 102
6.9 Positive and Negative Energy Modes 102
6.10 Concluding Remarks 104

7 EIH Theory and Noether's Theorem **107**
Peter G. Bergmann
7.1 Introduction 107
7.2 Invariance Group and Noether's Theorem 108
7.3 An Example 108
7.4 The Generalized EIH Theory 110
7.5 Concluding Remarks 111

8 The Static Cylinder in General Relativity **113**
W.B. Bonnor
8.1 Introduction 113
8.2 The HD Solution 115
8.3 Matching to LC Spacetime 115
8.4 Physical Interpretation 117
8.5 The Whittaker Mass per Unit Length 117
8.6 Conclusion 119

9 Gravity and the Tenacious Scalar Field **121**
Carl H. Brans
9.1 Scalar Gravity? 121
9.2 Kaluza–Klein Theories 126
9.3 Dirac's Numbers 128
9.4 Scalar–Tensor Theories 129
9.5 Dilatons 134
9.6 Inflatons 136
9.7 Conclusion 137

10 The Cavendish Experiment in General Relativity **139**
Dieter Brill
10.1 Introduction 139
10.2 Planar Symmetry 140
10.3 Exact, Static Solutions 141
10.4 Test Particle Motion 144
10.5 Conclusion 145

11 Wave Maps in General Relativity **147**
Yvonne Choquet-Bruhat
11.1 Introduction 147
11.2 Definitions 148
11.3 Wave Maps—the Cauchy Problem 149
11.4 Harmonic Gauges in General Relativity 153
11.4.1 Existence of a Solution of the Vacuum Einstein Equations 154
11.4.2 Uniqueness Theorem 154
11.5 Global Problem—the First Energy Estimate 155
11.6 Second Energy Inequality 158
11.7 Wave Map from the Outside of a Black Hole 163

12 General Relativity and Experiment **171**
Thibault Damour
12.1 Introduction 171
12.2 Experimental Tests of the Coupling Between Matter and Gravity 172

12.3 Tests of the Dynamics of the Gravitational Field in the Weak-Field Regime . . . 174
12.4 Tests of the Dynamics of the Gravitational Field in the Strong-Field Regime . . . 176
12.5 Cosmological Tests . . . 180
12.6 Was Einstein 100% Right ? . . . 181

13 Some Developments in Newtonian Cosmology 189
Jürgen Ehlers
13.1 Introduction: The Curious History of Newtonian Cosmology . 189
13.2 Two Formulations of Newtonian Cosmology and its Relationship to Relativistic Cosmology . . . 190
13.2.1 The Heckmann–Schucking Formulation . . . 190
13.2.2 The Cartan–Friedrichs Formulation . . . 192
13.2.3 Electrodynamics and Optics in Newtonian Cosmology . 193
13.2.4 Relations Between Relativistic and Newtonian Cosmological Models . . . 194
13.3 Observer-Homogenous, Bianchi-Type Models . . . 195
13.4 Averaging in Cosmology . . . 196
13.5 Lagrangian Perturbation Theory . . . 199

14 Deviation of Geodesics in FLRW Spacetime Geometries 203
George F.R. Ellis, Henk van Elst
14.1 Introduction . . . 203
14.1.1 The Cosmological Context . . . 205
14.2 The Riemann Curvature Tensor . . . 205
14.3 The Geodesics . . . 207
14.3.1 Timelike . . . 209
14.3.2 Spacelike . . . 209
14.3.3 Null . . . 210
14.4 The Geodesic Deviation Equation . . . 210
14.4.1 The Deviation Vectors . . . 210
14.4.2 Geodesic Deviation for a Fundamental Observer . . . 212
14.4.3 Past Directed Null Vector Fields . . . 217
14.4.4 Generic Geodesic Vector Fields . . . 220
14.5 Conclusion . . . 223

15 Poincaré Pseudosymmetries in Asymptotically Flat Spacetimes 227
Simonetta Frittelli, Ezra T. Newman
15.1 Introduction . . . 227
15.2 Minkowski Space . . . 229
15.3 Asymptotically Flat Spacetimes . . . 232
15.4 Discussion . . . 236

16 Taub Numbers and Asymptotic Invariants **241**
Edward N. Glass
16.1 Introduction 241
16.2 Taub Numbers and Superpotential 243
16.3 Null Infinity 245
16.4 Kerr–Schild Solutions 246
16.5 Bondi–Sachs Solutions 247
16.6 Summary 249

17 Second-Class Constraints **251**
Joshua N. Goldberg
17.1 Introduction 251
17.2 The Mechanical System 252
17.3 The Self-Dual Maxwell Field 254
17.4 Conclusion 255

18 On the Structure of the Energy-Momentum and the Spin Currents in Dirac's Electron Theory **257**
Friedrich W. Hehl, Alfredo Macías, Eckehard W. Mielke, Yuri N. Obukhov
18.1 Introduction 257
18.2 Dirac–Yang-Mills Theory 259
18.3 Gordon Decomposition of Energy-Momentum and Spin Currents 261
18.4 Relocalization of Energy-Momentum and Spin 264
18.5 Trivial Lagrangians and Relocalization 266
18.6 Belinfante Symmetrization of the Energy-Momentum Current . 268
18.7 Properties of the Gravitational Moments and Nonrelativistic Limit 270
18.8 Discussion 271

19 The Physical Reality of the Quantum Wave Function **275**
Arthur Komar
19.1 Introduction 275
19.2 The Thought Experiment 277
19.3 Schrödinger's Cats 280

20 The Ultimate Extension of the Bianchi Classification for Rotating Dust Models **283**
Andrzej Krasiński
20.1 Introduction and Summary 283
20.2 The Classification of Differential Forms of First Order and the Darboux Theorem 284
20.3 Geodesically Moving Fluids 285
20.4 The Killing Vector Fields Compatible with Rotation 288

20.5 The Case of Two Generators Spanned on u^α and w^α 289
20.6 The Case of One Generator Spanned on u^α and w^α 293
20.7 The Case of All Three Generators Being Linearly Independent of u^α and w^α 296
20.8 Conclusion 297

21 On the Classification of the Real Four-Dimensional Lie Algebras 299
M.A.H. MacCallum
21.1 Introduction 300
21.2 An Enumeration of the 4-Dimensional Algebras 302
21.3 Comparison with Other Enumerations 307
21.4 Extensions, Applications and Other Work 310

22 Spinning Universes in Newtonian Cosmology 319
Jayant V. Narlikar
22.1 Introduction 319
22.2 Homogeneous and Anisotropic Cosmologies 320
22.2.1 The Potential Function Approach 321
22.2.2 The Gravitational Force Approach 322
22.3 The Work of Davidson and Evans 324
22.4 Concluding Remarks 327

23 Relativistic Gravitational Fields with Close Newtonian Analogs 329
Pawel Nurowski, Engelbert Schucking, Andrzej Trautman
23.1 Introduction 329
23.2 Notation 330
23.3 The Metric, the Curvature, and the Ricci Tensors 330
23.4 The Comoving Coordinate System 331
23.5 Flat Space-Times 331
23.6 Nontrivial Solutions 332
23.6.1 Equations for a Perfect Fluid 332
23.6.2 Spherically Symmetric Spaces 332
23.6.3 The Kasner Solution 333
23.6.4 Perfect Fluid Generalizations of the Kasner Solution . . 334
23.7 Congruences of Null Geodesics 336

24 Working with Engelbert 339
István Ozsváth
24.1 Introduction 339
24.2 Exact Solutions 339
24.2.1 Remarks by Kurt Gödel 339
24.2.2 The Schucking Equations 340
24.2.3 The Schucking Solution 341
24.2.4 The Finite Rotating Universe 341
24.2.5 The Anti-Mach Metric 342

24.3 More on Exact Solutions . . . 342
24.3.1 All Homogeneous Vacuum Solutions with Λ term . . . 342
24.3.2 All Type N Vacuum Solutions with Λ term Vanishing Shear and Expansion . . . 343
24.3.3 Finite Rotating Universe Revisited . . . 343
24.4 Embedding Problems . . . 345
24.4.1 Embedding of Dantes into S^4 . . . 346
24.4.2 A Special Case for $\lambda = 0$ . . . 346
24.4.3 Embedding of Dantes into S^5 . . . 347
24.4.4 Embedding of Dantes into S^8 . . . 347
24.4.5 Embedding the General Dantes into S^8 . . . 348
24.5 The SU_3 Group . . . 349
24.6 In Closing . . . 350

25 Some Remarks on Twistor Theory **353**
Roger Penrose
25.1 Historical Comments . . . 353
25.2 Twistors and the Einstein Equations . . . 358

26 Critique of the Wheeler-DeWitt Equation **367**
Asher Peres
26.1 Introduction . . . 367
26.2 A Simple Example of Constrained Dynamics . . . 369
26.3 Definition of a Dynamical Time . . . 371
26.4 Quantization of a Minisuperspace . . . 373

27 A New Version of the Heavenly Equation **381**
Jerzy F. Plebański, Maciej Przanowski
27.1 Introduction . . . 381
27.2 An Expanding Congruence of Null Strings . . . 382
27.3 Hermitian and Kählerian Structures on $\mathcal{H}$ Space in Euclidean Relativity . . . 393
27.4 The Heavenly Equation . . . 398

28 A Plain Man's Guide to Bivectors, Biquaternions, and the Algebra and Geometry of Lorentz Transformations **407**
Wolfgang Rindler, Ivor Robinson
28.1 Introduction . . . 407
28.2 Basic Algebra of Real Bivectors and Complex Scalars . . . 408
28.3 Basic Geometry of Bivectors . . . 411
28.4 Biquaternions and the Bivector Transformations They Generate . . . 416
28.5 Lorentz Matrices . . . 419
28.6 The Geometry of Lorentz Transformations . . . 423
28.7 t-Real Biquaternions, t-Rotations, and t-Boosts . . . 428

28.8 The Thomas Precession 431

29 Leon Lichtenstein's Work on Rotating Fluids **435**
Bernd Schmidt
29.1 Introduction 435
29.2 Rigidly Rotating Fluids in Newtonian Theory 435
29.3 Rigidly Rotating Fluids in Einstein's Theory of Gravity 439
29.4 Speculations 440

30 Decaying Neutrinos and the Flattening of the Galactic Halo **443**
Dennis W. Sciama
30.1 Introduction 443
30.2 The Neutrino Density Near the Sun 444
30.3 τ_{23} and the Hα Data 446
30.4 τ_{23} and the Extragalactic Background at 1500 $\mathring{A}$ 446
30.5 Conclusions 447

31 The Kasner Condition and Inhomogeneous Perfect Fluid Cosmologies **449**
Jim E.F. Skea
31.1 Introduction 449
31.2 Mathematical Background 452
31.3 The Basic Quantities 454
31.4 The Cosmological Models 456
31.5 Application to Space-Times Admitting a G_1 459
31.6 Aspects of Invariant Classification 461
31.7 Discussion 462

32 Gravitational Screening **465**
E.A. Spiegel
32.1 Gravitational Stopping Power 465
32.2 A Drag Crisis 466
32.3 Saved by Self-Gravity 469
32.4 The Message Is The Medium 473

33 On the Interpretation of the Einstein–Cartan Formalism **475**
John Stachel
33.1 Introduction 475
33.2 The Analogy: Electromagnetism 476
33.3 The Analogy: Gravitation 478
33.4 Discussion 481

34 On Complex Structures in Physics **487**
Andrzej Trautman
34.1 Introduction 487
34.2 Definitions and Notation 488

34.3 A Complex Structure Defined by Differentiation 490
34.4 Complex Structures Associated with Pseudo-Euclidean Vector Spaces 491
34.5 Charge Conjugation 493
34.6 CR Structures Associated with Integrable Optical Geometries . 495

35 The Engelbert Experience: Pathways from the Past **503**
C. V. Vishveshwara

36 Curriculum Vita **515**
Engelbert Schucking
