Contents

Introduction	ix
Chapter 1. Real Vector Spaces	1
1.1. Linear and Affine Spaces	1
1.2. Maps and Matrices	4
1.3. Inner Products and Norms	7
1.4. Continuous and Differentiable Functions	10
Chapter 2. Linear Equations and Linear Inequalities	21
2.1. Gaussian Elimination	21
2.2. Orthogonal Projection and Least Square Approximation	32
2.3. Integer Solutions of Linear Equations	40
2.4. Linear Inequalities	45
Chapter 3. Polyhedra	55
3.1. Polyhedral Cones and Polytopes	55
3.2. Cone Duality	59
3.3. Polar Duality of Convex Sets	61
3.4. Faces	64
3.5. Vertices and Polytopes	67
3.6. Rational Polyhedra	70
Chapter 4. Linear Programs and the Simplex Method	71
4.1. Linear Programs	71
4.2. The Simplex Method	80
4.3. Sensitivity Analysis	91
4.4. The Primal-Dual Simplex Method	93
Chapter 5. Lagrangian Duality	95
5.1. Lagrangian Relaxation	95
5.2. Lagrangian Duality	98
5.3. Cone Duality	103
5.4. Optimality Conditions	105
Chapter 6. An Interior Point Algorithm for Linear Programs	109
6.1. A Primal-Dual Relaxation	109
6.2. An Interior Point Method	110
6.3. Constructing Good Basic Solutions	115

6.4.	Initialization and Rational Linear Programs	117
6.5.	The Barrier Point of View	120
Chapter 7.	Network Flows	123
7.1.	Graphs	123
7.2.	Shortest Paths	130
7.3.	Maximum Flow	139
7.4.	Min Cost Flows	144
Chapter 8.	Complexity	153
8.1.	Problems and Input Sizes	153
8.2.	Algorithms and Running Times	159
8.3.	Complexity of Problems	165
8.4.	Arithmetic Complexity	172
Chapter 9.	Integer Programming	173
9.1.	Formulating an Integer Program	173
9.2.	Cutting Planes I	176
9.3.	Cutting Planes II	182
9.4.	Branch and Bound	185
9.5.	Lagrangian Relaxation	187
9.6.	Dualizing the Binary Constraints	194
Chapter 10.	Convex Sets and Convex Functions	197
10.1.	Convex Sets	197
10.2.	Convex Functions	203
10.3.	Convex Minimization Problems	212
10.4.	Quadratic Programming	216
10.5.	The Ellipsoid Method	223
10.6.	Applications of the Ellipsoid Method	230
Chapter 11.	Unconstrained Optimization	241
11.1.	Optimality Conditions	242
11.2.	Descent Methods, Steepest Descent	245
11.3.	Conjugate Directions	248
11.4.	Line Search	253
11.5.	Newton's Method	256
11.6.	The Gauss-Newton Method	260
11.7.	Quasi-Newton Methods	261
11.8.	Minimization of Nondifferentiable Functions	266
Chapter 12.	Constrained Nonlinear Optimization	273
12.1.	First Order Optimality Conditions	274
12.2.	Primal Methods	285
12.3.	Second Order Optimality Conditions and Sensitivity	293
12.4.	Penalty and Barrier Methods	297

12.5. Kuhn-Tucker Methods	303
12.6. Semi-infinite and Semidefinite Programs	310
List of frequently used Symbols	325
Bibliography	327
Index	331
