Preface	ix
Part I Limit Theorems of Set-Valued and Fuzzy Set-Valued Random Variables	
1. THE SPACE OF SET-VALUED RANDOM VARIABLES	1
1 Hyperspaces of a Banach Space	1
1.1 The Hausdorff Metric in Hyperspaces and An Embedding Theorem	1
1.2 Convergences in Hyperspaces	12
2 Set-Valued Random Variables	20
3 The Set of Integrable Selections	26
4 The Spaces of Integrably Bounded Set-Valued Random Variables	34
2. THE AUMANN INTEGRAL AND THE CONDITIONAL EXPECTATION OF A SET-VALUED RANDOM VARIABLE	41
1 The Aumann Integral and Its Properties	41
2 Sufficient Conditions for the Aumann Integrals To Be Closed	47
3 Conditional Expectation and Its Properties	54
4 Fatou's Lemmas and Lebesgue's Dominated Convergence Theorems	67
5 Radon-Nikodym Theorems for Set-Valued Measures	73
5.1 Set-Valued Measures	74
5.2 Radon-Nikodym Theorems for Set-Valued Measures	81

3.	STRONG LAWS OF LARGE NUMBERS AND CENTRAL LIMIT THEOREMS FOR SET-VALUED RANDOM VARIABLES	87
1	Limit Theorems for Set-Valued Random Variables in the Hausdorff Metric	87
1.1	Strong Laws of Large Numbers in the Hausdorff Metric	87
1.2	Central Limit Theorems	96
2	Strong Laws of Large Numbers for Set-Valued Random Variables in the Kuratowski–Mosco Sense	100
3	Gaussian Set-Valued Random Variables	105
4	Appendix A of Subsection 3.1.2	108
4.	CONVERGENCE THEOREMS FOR SET-VALUED MARTINGALES	117
1	Set-Valued Martingales	117
2	Representation Theorems for Closed Convex Set-Valued Martingales	126
3	Convergence of Closed Convex Set-Valued Martingales in the Kuratowski–Mosco Sense	134
4	Convergence of Closed Convex Set-Valued Submartingales and Supermartingales in the Kuratowski–Mosco Sense	138
4.1	Convergence of Closed Convex Set-Valued Sub- martingales in the Kuratowski–Mosco Sense	138
4.2	Convergence of Closed Convex Set-Valued Super- martingales in the Kuratowski–Mosco Sense	142
5	Convergence of Closed Convex Set-Valued Supermartingales (Martingales) Whose Values May Be Unbounded	143
6	Optional Sampling Theorems for Closed Convex Set-Valued Martingales	150
7	Doob Decomposition of Set-Valued Submartingales	155
5.	FUZZY SET-VALUED RANDOM VARIABLES	161
1	Fuzzy Sets	162
2	The Space of Fuzzy Set-Valued Random Variables	171
3	Expectations of Fuzzy Set-Valued Random Variables	181
4	Conditional Expectations of Fuzzy Random Sets	184
5	The Radon–Nikodym Theorem for Fuzzy Set-Valued Mea- sures	187

6.	CONVERGENCE THEOREMS FOR FUZZY SET-VALUED RANDOM VARIABLES	191
1	Embedding Theorems and Gaussian Fuzzy Random Sets	191
1.1	Embedding Theorems	191
1.2	Gaussian Fuzzy Set-Valued Random Variables	195
2	Strong Laws of Large Numbers for Fuzzy Set-Valued Ran- dom Variables	197
3	Central Limit Theorems for Fuzzy Set-Valued Random Variables	205
4	Fuzzy Set-Valued Martingales	214
7.	CONVERGENCES IN THE GRAPHICAL SENSE FOR FUZZY SET-VALUED RANDOM VARIABLES	221
1	Convergences in the Graphical Sense for Fuzzy Sets	221
2	Separability for the Graphical Convergences and Applica- tions to Strong Laws of Large Numbers	226
3	Convergence in the Graphical Sense for Fuzzy Set-Valued Martingales and Smartingales	231
	REFERENCES FOR PART I	235

## Part II Practical Applications of Set-Valued Random Variables

8.	MATHEMATICAL FOUNDATIONS FOR THE APPLICATIONS OF SET-VALUED RANDOM VARIABLES	253
1	How Can Limit Theorems Be Applied?	253
2	Relevant Optimization Techniques	257
2.1	Introduction: Optimization of Set Functions Is a Practically Important but Difficult Problem	257
2.2	The Existing Methods of Optimizing Set Functions: Their Successes (In Brief) and the Territorial Divi- sion Problem as a Challenge	261
2.3	A Differential Formalism for Set Functions	264
2.4	First Application of the New Formalism: Territorial Division Problem	274
2.5	Second Application of the New Formalism: Statisti- cal Example — Excess Mass Method	282
2.6	Further Directions, Related Results, and Open Problems	284

3	Optimization Under Uncertainty and Related Symmetry Techniques	286
3.1	Case Study: Selecting Zones in a Plane	286
3.2	General Case	290
9.	APPLICATIONS TO IMAGING	295
1	Applications to Astronomy	295
2	Applications to Agriculture	306
2.1	Detecting Trash in Ginned Cotton	306
2.2	Classification of Insects in the Cotton Field	313
3	Applications to Medicine	322
3.1	Towards Foundations for Traditional Oriental Medicine	322
3.2	Towards Optimal Pain Relief: Acupuncture and Spinal Cord Stimulation	325
4	Applications to Mechanical Fractures	336
4.1	Fault Shapes	336
4.2	Best Sensor Locations for Detecting Shapes	337
5	What Segments are the Best in Representing Contours?	342
6	Searching For a 'Typical' Image	345
6.1	Average Set	345
6.2	Average Shape	351
10.	APPLICATIONS TO DATA PROCESSING	355
1	1-D Case: Why Intervals? A Simple Limit Theorem	355
2	2-D Case: Candidate Sets for Complex Interval Arithmetic	360
3	Multi-D Case: Why Ellipsoids?	362
4	Conclusions	372
	REFERENCES FOR PART II	373
