BOOK I SEARCH GAMES

1	Introduction to Search Games	3
	Part One Search Games in Compact Spaces	7
2	General Framework	9
3	Search for an Immobile Hider	13
3.1	Introduction	13
3.2	Search in a Network	17
3.3	Search on a Tree	21
3.4	When is the Random Chinese Postman Tour Optimal?	25
3.4.1	Searching weakly cyclic networks	25
3.4.2	Searching weakly Eulerian networks	27
3.5	Simple Networks Requiring Complicated Strategies	31
3.6	Using Dynamic Programming for Finding Optimal Response Search Trajectories	36
3.7	Search in a Multidimensional Region	39
3.7.1	Inhomogeneous search spaces	42
4	Search for a Mobile Hider	45
4.1	Introduction	45
4.2	Search on k Arcs	48
4.3	Search on a Circle	52
4.4	Quickly Searched Networks	53
4.4.1	The figure eight network	55
4.5	The Princess and the Monster in Two Dimensions	58
4.5.1	General framework	58
4.5.2	Strategy of the searcher	59
4.5.3	Strategy of the hider	67

4.6	Modifications and Extensions.....	73
4.6.1	A “non-localized” search strategy.....	73
4.6.2	Search in non-convex regions.....	74
4.6.3	Multidimensional extensions.....	74
4.6.4	The case of several searchers.....	74
4.6.5	The case of an arbitrary starting point.....	75
4.6.6	Loitering strategies.....	75
4.6.7	Non-homogeneous search spaces.....	75
4.6.8	A general cost function.....	76
5	Miscellaneous Search Games	79
5.1	Search in a Maze.....	79
5.2	High–Low Search.....	84
5.2.1	Continuous high–low search.....	84
5.2.2	Economic applications.....	89
5.2.3	Discrete high–low search.....	91
5.3	Infiltration Games.....	92
5.4	Searching in Discrete Locations.....	95
Part Two Search Games in Unbounded Domains		99
6	General Framework	101
6.1	One-Dimensional Search Games.....	101
6.2	Multidimensional Search Games.....	104
7	On Minimax Properties of Geometric Trajectories	107
7.1	Introduction.....	107
7.2	Minimax Theorems.....	109
7.2.1	Minimax theorems for the continuous case.....	116
7.3	Uniqueness of the Minimax Strategy.....	117
8	Search on the Infinite Line	123
8.1	Introduction.....	123
8.2	The Linear Search Problem as a Search Game.....	124
8.2.1	The minimax search trajectory.....	126
8.2.2	Minimax trajectory on a half-line.....	128
8.3	Optimal Strategies.....	129
8.4	Search with a Turning Cost.....	132
8.5	Search for a Moving Hider.....	134
8.6	Search with Uncertain Detection.....	137
8.6.1	Search with a delay.....	138
8.6.2	Geometric detection probability.....	139
8.7	A Dynamic Programming Algorithm for the LSP.....	139
9	Star and Plan Search	145
9.1	Introduction.....	145

9.2 Star Search 145
 9.3 Search on the Boundary of a Region 154
 9.4 Search for a Point in the Plane 157
 9.5 “Swimming in a Fog” Problems 159
 9.6 Searching for a Submarine with a Known Initial Location 161

BOOK II RENDEZVOUS THEORY

10 Introduction to Rendezvous Search 165
 10.1 Relation to Coordination Games 167
 10.2 Real-Life Rendezvous 168
 10.3 Rendezvous Strategies 170
 10.4 Outline of Book II 171

11 Elementary Results and Examples 173
 11.1 Symmetric Rendezvous on the Line 173
 11.2 Multi-Rendezvous on the Circle 175
 11.3 FOCAL Strategies on the Line 176
 11.4 Rendezvous in Two Cells 177

Part Three Rendezvous Search on Compact Spaces 179

12 Rendezvous Values of a Compact Symmetric Region 181
 12.1 Player Symmetry 182
 12.2 Spatial Symmetry 182
 12.3 An Example: The Circle 184
 12.4 The Asymmetric Rendezvous Value R^a 185
 12.5 The Symmetric Rendezvous Value R^s 187
 12.6 Properties of Optimal Strategies and Rendezvous Values 188

13 Rendezvous on Labeled Networks 191
 13.1 Networks and H-Networks 191
 13.2 Rendezvous on H-Networks 193
 13.3 The Interval H-Network 197
 13.3.1 Nondecreasing initial distributions 198
 13.4 The Circle and the Circle H-network 201
 13.4.1 Symmetric rendezvous on the labeled circle 201
 13.4.2 Asymmetric rendezvous on the labeled circle 204

14 Asymmetric Rendezvous on an Unlabeled Circle 205
 14.1 One-Sided Search on the Circle 208
 14.2 Asymmetric Rendezvous on a Directed Circle 211
 14.3 Asymmetric Rendezvous on an Undirected Circle: Formalization 213
 14.4 Alternating Search on Two Circles 215
 14.5 Optimal Rendezvous on the Undirected Circle 217
 14.5.1 Monotone densities 218

14.5.2	Slowly varying densities	220
14.5.3	Arbitrary distributions	221
15	Rendezvous on a Graph	223
15.1	Asymmetric Rendezvous	225
15.2	Symmetric Rendezvous	227
15.3	Symmetric Rendezvous on a Complete Graph	227
15.3.1	Revealed actions	230
15.4	Symmetric Search on C_n	231
15.4.1	Symmetric Markovian strategies	231
Part Four	Rendezvous Search on Unbounded Domains	235
16	Asymmetric Rendezvous on the Line (ARPL)	237
16.1	Asymmetric Rendezvous Value $R^a(F)$	238
16.2	Finiteness of $R^a(F)$	240
16.3	The Double Linear Search Problem (DLSP)	241
16.4	Meeting-Probability Maximization	242
16.5	Atomic Distribution	243
16.6	Discrete Distributions	246
16.7	Arbitrary Distributions	247
16.8	Convex Distributions	248
17	Other Rendezvous Problems on the Line	251
17.1	Unequal Speeds	252
17.2	Player Symmetry	254
17.3	Bounded Resources	256
17.3.1	Expected time minimization for $3a + 5b \geq 15D$	256
17.3.2	Probability maximization	259
17.4	Unknown Initial Distribution	264
17.4.1	Asymmetric strategies	264
17.4.2	Symmetric strategies	267
17.5	Multiplayer Rendezvous	267
17.5.1	Expected time minimization	268
17.5.2	Maximum time minimization	270
17.6	Asymmetric Information	273
18	Rendezvous in Higher Dimensions	277
18.1	Asymmetric Rendezvous on a Planar Lattice	277
18.2	The n -Dimensional Lattice Z^n	284
18.2.1	Asymmetric rendezvous	284
18.2.2	Symmetric rendezvous	286
18.3	Continuous Rendezvous in the Plane	288
18.3.1	Common notion of direction	288
18.3.2	Asymmetric information	289
18.3.3	Asymmetric speed and detection radius	290

Appendices

A A Minimax Theorem for Zero-Sum Games 291

B Theory of Alternating Search 295

B.1 Arbitrary Regions 297

C Rendezvous-Evasion Problems 299

Bibliography 303

Index 317
