

Sustainable Energy

Choosing Among Options

Jefferson W. Tester, Elisabeth M. Drake, Michael W. Golay,
Michael J. Driscoll, and William A. Peters

The MIT Press
Cambridge, Massachusetts
London, England

Contents

Preface	xvii
Acknowledgments	xxi
Chapter 1 Sustainable Energy—The Engine of Sustainable Development . . .	1
1.1 Sustainable Energy: The Engine of Sustainable Development	2
1.2 Defining Energy—Scientific and Engineering Foundations	9
1.3 Aspects of Energy Production and Consumption	17
1.4 National and Global Patterns of Energy Supply and Utilization	24
1.5 Environmental Effects of Energy—Gaining Understanding	32
1.6 Confronting the Energy-Prosperity-Environmental Dilemma	41
1.7 Mathematical Representations of Sustainability	45
1.8 The Rest of This Book	47
References	48
Chapter 2 Estimation and Evaluation of Energy Resources	51
2.1 Units of Measurement: Energy and Power	52
2.2 Comparison of Different Forms of Energy	54
2.3 The Energy Lifecycle	56
2.4 Estimation and Valuation of Fossil Mineral Fuels, Especially Petroleum	64
2.4.1 Asking the right questions and avoiding the unanswerable ones	64
2.4.2 Perspectives from mineral geology	65
2.4.3 Two interpretations of hydrocarbon fuel economics	66
2.4.4 Categories of reserves	73
2.4.5 Forecasting mineral fuel prices and supplies	75
2.4.6 Geopolitical factors and energy supply "crises"	79
2.5 Lessons for Sustainable Development	82
2.6 Summary and Conclusions	83
References	83
Chapter 3 Technical Performance: Allowability, Efficiency, Production Rates 87	
3.1 Relation to Sustainability	88
3.2 An Introduction to Methods of Thermodynamic Analysis	90
3.2.1 Allowability, efficiency, and the Second Law	90
3.2.2 More about entropy	92

3.2.3 Analysis of ideal (Carnot) heat engines	98
3.2.4 Analysis of real world (irreversible) heat engines	100
3.3 The Importance of Rate Processes in Energy Conversion	115
3.4 Chemical Rate Processes	116
3.5 The Physical Transport of Heat	120
3.5.1 Foundations for quantitative analysis	120
3.5.2 Thermal conduction	122
3.5.3 Convective heat transfer	123
3.5.4 Radiative heat transmission	124
3.5.5 Heat transfer by tandem mechanisms	128
3.6 Use and Abuse of Time Scales	129
3.7 Energy Resources and Energy Conversion—Fertile Common Ground	131
References	131
Problems	134
Chapter 4 Local, Regional, and Global Environmental Effects of Energy . . .	137
4.1 How Energy Systems Interact with the Environment	138
4.1.1 Known and potential environmental threats	138
4.1.2 Origin of harmful agents	140
4.1.3 Length and time scales for environmental impacts	143
4.2 Adverse Environmental Effects Over Local and Regional Length Scales	147
4.2.1 Ambient air pollution	147
4.2.2 Adulteration of soil, water, and indoor air	156
4.2.3 Transport and transformation of air, ground, and water contamination	157
4.3 Global Climate Change: Environmental Consequences over Planetary-Length Scales	158
4.3.1 Introduction	158
4.3.2 Basic science of the greenhouse effect	160
4.3.3 Energy and the greenhouse effect	167
4.3.4 Greenhouse consequences: Consensus, unknowns, misconceptions	172
4.3.5 Technological and policy response strategies: Evolutionary and revolutionary	178
4.4 Attribution of Environmental Damage to Energy Utilization	184
4.4.1 Diagnosing receptor jeopardy and injury	185
4.4.2 Source identification	190
4.4.3 Risk and uncertainty	191
4.5 Methods of Environmental Protection	191
4.5.1 Energy and the environment as an ensemble of coupled complex systems	191
4.5.2 Earth-system ecology as a working paradigm	192
4.5.3 Public policy instruments	195
4.5.4 Technological remedies	196

4.6 Environmental Benefits of Energy	196
4.6.1 Pollution prevention and environmental restoration	196
4.6.2 Social and economic foundations for environmental stewardship	197
4.7 Implications for Sustainable Energy	197
4.7.1 Environmental footprints as sustainability metrics	197
4.7.2 The unusual challenge of global climate change	198
Problems	199
Appendix: Lessons from SO ₂ Emissions Trading	200
References	203
Chapter 5 Project Economic Evaluation	207
5.1 Introduction	208
5.2 Time Value of Money Mechanics	211
5.2.1 Basic aspects	211
5.2.2 Application to a typical cash flow scenario	213
5.2.3 Derivation of relations	215
5.2.4 Pitfalls, errors, and ambiguities	220
5.3 Current versus Constant-Dollar Comparisons	222
5.4 Simple Payback	225
5.5 Economy of Scale and Learning Curve	225
5.6 Allowing for Uncertainty	229
5.6.1 Overview	229
5.6.2 Analytic uncertainty propagation	229
5.6.3 The Monte Carlo method	230
5.6.4 Decision tree method	232
5.7 Accounting for Externalities	232
5.8 Energy Accounting	239
5.9 Modeling Beyond the Project Level	241
5.10 Chapter Summary	243
Appendix A	245
Appendix B	247
References	251
Problems	254
Chapter 6 Energy Systems and Sustainability Metrics	259
6.1 Introduction and Historical Notes	260
6.2 Energy from a Systems Perspective	263
6.3 Systems Analysis Approaches	271

6.3.1 Lifecycle analysis	273
6.3.2 Simulation models	275
6.3.3 Risk-based models	276
6.4 Measures of Sustainability	279
6.4.1 General indicators of sustainability	280
6.4.2 Categories of indicators	282
6.5 Drivers of Societal Change	284
6.6 Some General Principles of Sustainable Development	287
References	289
Web Sites of Interest	292
Problems	292
Chapter 7 Fossil Fuels and Fossil Energy	295
7.1 Introduction	296
7.1.1 Definition and types of fossil fuels	296
7.1.2 Historical and current contributions of fossil fuels to human progress	300
7.1.3 Sustainability: Challenges and opportunities	302
7.2 The Fossil Fuel Resource Base	302
7.2.1 How long will fossil fuels last?	302
7.2.2 "Unconventional" naturally occurring fossil fuels	303
7.2.3 Fossil resources and sustainability	305
7.3 Harvesting Energy and Energy Products from Fossil Fuels	306
7.3.1 Exploration, discovery, and extraction of fuels	306
7.3.2 Fuel storage and transportation	306
7.3.3 Fuel conversion	307
7.3.4 Fuel combustion	317
7.3.5 Direct generation of electricity: Fuel cells	324
7.3.6 Manufacture of chemicals and other products	329
7.4 Environmental Impacts	329
7.4.1 Pollutant sources and remedies: The fuel itself	329
7.4.2 Pollutant sources and remedies: Combustion pathologies	332
7.4.3 Pollutant sources and remedies: Carbon management	333
7.5 Geopolitical and Sociological Factors	337
7.5.1 Globalization of fossil energy sources	337
7.5.2 Equitable access, Revenue scaffolds, "American Graffiti"	338
7.6 Economics of Fossil Energy	341
7.7 Some Principles for Evaluating Fossil and Other Energy Technology Options	346
7.8 Emerging Technologies	353

7.9 Closure: Why Are Fossil Fuels Important to Sustainable Energy?	353
References	355
Problems	359
Chapter 8 Nuclear Power	361
8.1 Nuclear History	362
8.2 Physics	364
8.3 Nuclear Reactors	364
8.4 Burning and Breeding	368
8.5 Nuclear Power Economics	369
8.6 The Three Mile Island 2 Nuclear Power Plant Accident	370
8.7 Reactor Safety	372
8.8 Light-Water Reactors (LWR)	374
8.9 Pressurized-Water Reactor (PWR) Technologies	374
8.10 Boiling-Water Reactor (BWR) Technology	377
8.11 RBMK Reactors	377
8.12 Heavy-Water Cooled Technologies	380
8.13 Gas-Cooled Reactor Technologies	380
8.14 Liquid-Metal Reactor Technologies	384
8.15 Actinide Burning	385
8.16 Advanced Reactors	387
8.17 Nuclear Power Fuel Resources	387
8.18 Fuel Cycle	389
8.18.1 Uranium mining	390
8.18.2 Uranium milling	390
8.18.3 Conversion	391
8.18.4 Enrichment	391
8.18.5 Fuel fabrication	392
8.18.6 Spent fuel	392
8.18.7 Reprocessing	393
8.18.8 High Level Wastes (HLW) disposal	394
8.19 Fusion Energy	397
8.19.1 Introduction	397
8.19.2 Why is fusion more difficult than fission?	398
8.19.3 Magnetic fusion energy	400
8.19.4 Inertial fusion energy	401
8.19.5 Prospects for the future	402
8.20 Future Prospects for Nuclear Power	404
References	405
Additional Resources	406

Chapter 9 Renewable Energy in Context	407
9.1 Introduction and Historical Notes	408
9.2 Resource Assessment	410
9.3 Environmental Impacts	412
9.4 Technology Development and Deployment	413
9.5 The Importance of Storage	414
9.6 Connecting Renewables to Hydrogen	414
9.7 The Future for Renewable Energy	415
9.8 Additional Resources	416
References	416
Chapter 10 Biomass Energy	419
10.1 Characterizing the Biomass Resource	420
10.2 Biomass Relevance to Energy Production	424
10.2.1 Utilization options	424
10.2.2 Advantages and disadvantages	424
10.2.3 More on resources	427
10.3 Chemical and Physical Properties Relevant to Energy Production	429
10.4 Biomass Production: Useful Scaling Parameters	430
10.5 Thermal Conversion of Biomass	432
10.5.1 Biomass to electricity	432
10.5.2 Biomass to fuels	434
10.6 Bioconversion	437
10.6.1 Introduction	437
10.6.2 Biogas	437
10.6.3 Fermentation ethanol from corn and cellulosic biomass	440
10.7 Environmental Issues	440
10.8 Economics	443
10.9 Enabling Research and Development	444
10.10 Disruptive Technology	444
10.11 Summary	446
References	446
Web Sites of Interest	449
Problems	449
Chapter 11 Geothermal Energy	453
11.1 Characterization of Geothermal Resource Types	454
11.1.1 Definition in general	454
11.1.2 Natural hydrothermal systems	457

- 11.1.3 Geopressured systems 459
- 11.1.4 Hot dry rock 459
- 11.1.5 Magma 461
- 11.1.6 Ultra low-grade systems 461
- 11.1.7 Markets for geothermal energy 462
- 11.2 Geothermal Resource Size and Distribution 464
 - 11.2.1 Overall framework and terminology 464
 - 11.2.2 Quality issues 465
 - 11.2.3 Resource base and reserve estimates 466
- 11.3 Practical Operation and Equipment for Recovering Energy 468
 - 11.3.1 Drilling and field development 468
 - 11.3.2 Reservoir fluid production 469
 - 11.3.3 Non-electric, direct-heat utilization 473
 - 11.3.4 Electric power generation 477
 - 11.3.5 Equipment 481
 - 11.3.6 Power cycle performance 485
- 11.4 Sustainability Attributes 487
 - 11.4.1 Reservoir lifetime issues 487
 - 11.4.2 Environmental impacts 488
 - 11.4.3 Dispatchable heat and power delivery 490
 - 11.4.4 Suitability for developing countries 490
 - 11.4.5 Potential for CO₂ reduction and pollution prevention 490
- 11.5 Status of Geothermal Technology Today 491
 - 11.5.1 Hydrothermal 491
 - 11.5.2 Advanced systems 495
- 11.6 Competing in Today’s Energy Markets 505
- 11.7 Research and Development Advances Needed 508
- 11.8 Potential for the Long Term 510
- References 510
- Web Sites of Interest 517
- Problems 517

- Chapter 12 Hydropower 519**
 - 12.1 Overview of Hydropower 520
 - 12.2 Hydropower Resource Assessment 522
 - 12.3 Basic Energy Conversion Principles 525
 - 12.4 Conversion Equipment and Civil Engineering Operations 527
 - 12.4.1 Civil engineering aspects of dam construction and waterway management . . . 527
 - 12.4.2 Turbines as energy convertors 529

12.5 Sustainability Attributes	531
12.6 Status of Hydropower Technology Today	535
12.6.1 Economic issues	535
12.6.2 Potential for growth	537
12.6.3 Advanced technology needs	538
References	540
Web Sites of Interest	542
Problems	542
Chapter 13 Solar Energy	543
13.1 General Characteristics of Solar Energy	544
13.2 Resource Assessment	544
13.3 Passive and Active Solar Thermal Energy for Buildings	554
13.3.1 Motivation and general issues	554
13.3.2 Passive systems	555
13.3.3 Active systems	556
13.3.4 Economic and policy issues	559
13.4 Solar Thermal Electric Systems—Concentrating Solar Power	561
13.4.1 Fundamentals and options	561
13.4.2 Power tower—central receiver systems	562
13.4.3 Parabolic troughs	565
13.4.4 Dish engine systems	568
13.4.5 Current status and future potential of CSP	569
13.5 Solar Photovoltaic (PV) Systems	572
13.5.1 Solid state physical chemistry fundamentals	573
13.5.2 Performance limits and design options	575
13.5.3 Silica-based systems (crystalline and amorphous)	578
13.5.4 Copper indium diselenide (CIS)	579
13.5.5 Cadmium telluride (CdTe)	579
13.5.6 Current status and future potential of PV	580
13.6 Sustainability Attributes	582
13.7 Summary and Prognosis	584
References	585
Web Sites of Interest	586
Problems	587
Chapter 14 Ocean Waves, Tide, and Thermal Energy Conversion	589
14.1 Introduction	590
14.2 Energy from the Tides	590

14.3 Energy from the Waves: Overview	597
14.4 Energy from Temperature Differences	599
14.4.1 Overview	599
14.4.2 Performance limits	600
14.4.3 OTEC technology	602
14.5 Economic Prospects	604
14.6 Environmental and Sustainability Considerations	605
14.7 The Ocean as an Externalities Sink	606
14.8 Current Status and Future Prospects	606
References	607
Web Sites of Interest	609
Problems	609
Appendix	611
Chapter 15 Wind Energy	613
15.1 Introduction and Historical Notes	614
15.2 Wind Resources	617
15.2.1 Wind quality	619
15.2.2 Variation of wind speed with elevation	622
15.2.3 Air density	624
15.2.4 Maximum wind turbine efficiency: The Betz ratio	624
15.3 Wind Machinery and Generating Systems	627
15.3.1 Overview	627
15.3.2 Rotor blade assembly	627
15.3.3 Tower	630
15.3.4 Nacelle components	630
15.3.5 Balance-of-station subsystems	630
15.3.6 System design challenges	631
15.4 Wind Turbine Rating	631
15.5 Wind Power Economics	632
15.6 Measures of Sustainability	635
15.6.1 Net energy analysis	635
15.6.2 Cost of externalities	635
15.6.3 Environmental impact of wind power	636
15.7 Current Status/Future Prospects	637
References	640
Web Sites of Interest	642
Problems	642
Appendix	645

Chapter 16 Storage, Transportation, and Distribution of Energy	647
16.1 Overview of Energy Supply Infrastructure Needs	648
16.2 Connected Efficiencies and Energy Chains	651
16.3 Modes of Energy Storage	653
16.3.1 General characteristics	653
16.3.2 Energy storage technologies	658
16.4 Energy Transmission	670
16.4.1 General characteristics of energy transmission systems	670
16.4.2 Oil transport	671
16.4.3 Natural gas transport	674
16.4.4 Coal transport	675
16.4.5 Electric power transmission	676
16.5 Energy Distribution Systems	678
16.5.1 General characteristics of central versus distributed systems	678
16.5.2 Combined heat and power opportunities	681
16.5.3 Applications to renewable energy systems and hybrids	683
16.6 Sustainability Attributes	683
16.6.1 Improved resource utilization	683
16.6.2 Environmental, safety, and health concerns	683
16.6.3 Economic and operational attributes	684
16.7 Opportunities for Advancement of Sustainable Energy Infrastructures	684
References	686
Web Sites of Interest	688
Problems	688
Chapter 17 Electric Power Sector	693
17.1 Introduction and Historical Perspectives	694
17.2 Power Generation	698
17.2.1 Electric energy	698
17.2.2 Centralized energy generation	700
17.2.3 Electric power generation	700
17.2.4 Environmental effects of electricity production	701
17.2.5 Power plant siting requirements	704
17.2.6 Electricity economics	705
17.2.7 Ways of organizing the electric economy	707
17.2.8 Demand-side management (DSM) and distributed generation	708
17.2.9 Electricity transmission and distribution and economic deregulation	708
17.3 An Example of Electric Industry Planning Using Multiattribute Assessment Tools	710

17.4 Energy Market Impacts on Electricity Generation Options 715

17.5 Sustainability Issues 719

References 724

Web Sites of Interest 725

Problems 726

Chapter 18 Transportation Services 727

18.1 Introduction and Historical Perspectives 728

18.2 Elements of the Transportation System 733

18.3 Transportation Fuels and the Fuel Cycle 735

18.4 Personal Vehicles 739

 18.4.1 Historical perspectives 739

 18.4.2 Looking forward 741

18.5 A Lifecycle Comparison of Road Transport Alternatives for 2020 744

18.6 Freight Vehicles 752

18.7 Interurban and Intercontinental Transport 753

18.8 Motorization Trends 753

18.9 Sustainability Issues 755

References 757

Web Sites of Interest 758

Problems 758

Chapter 19 Industrial Energy Usage 761

19.1 Introduction and Historical Perspectives 762

19.2 Lifecycle Analysis and Design for Sustainability 763

19.3 Metals Industries 766

19.4 Cement and Lime Industries 767

19.5 Chemical Industries 769

19.6 Forest Products and Agriculture 770

19.7 Waste Management Industries 772

19.8 Sustainability Issues 773
