<b>Preface</b>	<b>xiii</b>
<b>I Overviews and Surveys</b>	<b>1</b>
<b>1 30 Years of Multidimensional Multivariate Visualization</b>	<b>3</b>
1.1 Introduction	3
1.2 Four Stages of Multidimensional Multivariate Visualization Development	4
1.2.1 Pre-1976: The Searching Stage	4
1.2.2 1977–1985: The Awakening Stage	4
1.2.3 1986–1991: The Discovery Stage	5
1.2.4 1992–Present: The Elaboration and Assessment Stage	5
1.3 Terminology	6
1.4 Fundamental Objectives and Approach	7
1.5 Multidimensional Multivariate Visualization and Concepts	7
1.5.1 Techniques Based on 2-Variate Displays	8
1.5.2 Multivariate Visualization Techniques	10
1.5.3 Animation of Multidimensional Multivariate Data	26
1.6 Conclusions	28
Bibliography	29
<b>2 Immersive Investigation of Scientific Data</b>	<b>35</b>
2.1 Introduction	35
2.2 Techniques for Virtual Environments	36
2.2.1 Devices for Virtual Environments	36
2.2.2 Software Techniques for Virtual Environments	38
2.3 Classification of Immersive Scientific Visualization	44
2.4 Examples for Immersive Scientific Visualization	47
2.4.1 Virtual Environment Extension to Dataflow Systems	47
2.4.2 Virtual Windtunnel	47
2.4.3 Scientific Visualization in the CAVE Environment	48
2.4.4 Small-Scale Cellular Radio Networks	48
2.4.5 Combination of Full-Size VE and Scientific Visualization Systems	49
2.5 Extensive Example: Molecular Modeling	51
2.5.1 Introduction	51
2.5.2 Realization	51
2.6 Conclusion and Future Work	55

Bibliography . . . . .	55
<b>3 Survey of Grid Generation Methodologies and Scientific Visualization Efforts</b>	<b>59</b>
3.1 Introduction . . . . .	59
3.2 Survey of Numerical Grid Generation Techniques . . . . .	60
3.2.1 List of Grid Generation Methods and Grid Types . . . . .	60
3.2.2 Structured Grid Generation using TFI and Elliptic PDEs . . . . .	61
3.2.3 Unstructured Grid Generation Based on the Delaunay Triangulation . . . . .	66
3.2.4 Unstructured Grid Generation Based on Element Size Optimization . . . . .	67
3.2.5 Unstructured Grid Generation Based on the Advancing Front Method . . . . .	69
3.2.6 Chimera Grids . . . . .	69
3.2.7 Hybrid Grids . . . . .	69
3.2.8 Hierarchical Grid Generation Based on Quadtrees and Octrees . . . . .	70
3.3 The National Grid Project (NGP) . . . . .	71
3.3.1 Survey . . . . .	71
3.3.2 Approximation of Geometries with Discontinuities . . . . .	73
3.3.3 Grid Generation with the NGP System . . . . .	76
3.4 Visualization Efforts at the ERC-CFS . . . . .	77
3.4.1 The Scientific Visualization Thrust . . . . .	77
3.4.2 The Oceanographic Visualization Interactive Research Tool (OVIRT) . . . . .	78
3.4.3 The Site Characterization Interactive Research Toolkit (SCIRT) . . . . .	82
3.4.4 The ATOC-GAMOT Project (AGP) . . . . .	84
3.4.5 Feature Extraction from Oceanographic Data Sets . . . . .	87
3.4.6 Data Compression for Oceanographic Data Sets . . . . .	90
3.4.7 Concurrent Visualization . . . . .	95
3.5 Conclusions . . . . .	96
Bibliography . . . . .	96
<b>4 An Environment for Computational Steering</b>	<b>103</b>
4.1 Introduction . . . . .	103
4.1.1 Computational Steering . . . . .	103
4.1.2 Requirements . . . . .	104
4.1.3 Related Work . . . . .	106
4.1.4 Overview . . . . .	107
4.2 Architecture . . . . .	108
4.3 Parameterized Graphics Objects . . . . .	109
4.3.1 Overview . . . . .	109
4.3.2 Graphics Objects . . . . .	112
4.3.3 Degrees of Freedom . . . . .	112
4.3.4 Mapped Variables . . . . .	114
4.3.5 Output . . . . .	115
4.3.6 Input . . . . .	116
4.3.7 Arrays . . . . .	116
4.4 Applications . . . . .	117
4.4.1 Balls . . . . .	117

4.4.2	Cars . . . . .	117
4.4.3	Atmospheric Simulation . . . . .	118
4.5	Discussion . . . . .	120
4.5.1	Concepts . . . . .	120
4.5.2	Comparison . . . . .	121
4.5.3	Future Work . . . . .	122
4.6	Conclusions . . . . .	122
	Bibliography . . . . .	123
<b>5</b>	<b>Scientific Visualization of Large-Scale Unsteady Fluid Flows</b>	<b>125</b>
5.1	Introduction . . . . .	125
5.2	Problem . . . . .	127
5.3	Current Approaches . . . . .	128
5.4	Flow Visualization Systems . . . . .	129
5.5	Particle Tracing . . . . .	130
5.5.1	Numerical Models . . . . .	130
5.5.2	Particle Tracing Issues . . . . .	133
5.6	Unsteady Flow Analysis Toolkit . . . . .	138
5.6.1	Implementation . . . . .	138
5.6.2	Algorithms . . . . .	139
5.6.3	Summary of Steps for Streaklines . . . . .	139
5.7	Examples . . . . .	140
5.8	Conclusions . . . . .	143
	Bibliography . . . . .	143
<b>II</b>	<b>Frameworks and Methodologies</b>	<b>147</b>
<b>6</b>	<b>Integrated Volume Rendering and Data Analysis in Wavelet Space</b>	<b>149</b>
6.1	Introduction . . . . .	150
6.2	Mathematical Foundations . . . . .	151
6.2.1	The Wavelet Transform . . . . .	151
6.2.2	Extensions to Multiple Dimensions . . . . .	152
6.2.3	Wavelet Bases for Data Representation . . . . .	157
6.3	A Framework for Integrated Data Analysis and Visualization . . . . .	159
6.4	Data Analysis in Wavelet Space . . . . .	160
6.4.1	Feature Extraction in Images and Volumes . . . . .	160
6.4.2	A Pipeline for Data Analysis . . . . .	162
6.4.3	Some Results on Texture Analysis . . . . .	165
6.5	Volume Rendering in Wavelet Space . . . . .	166
6.5.1	Preliminary Remarks . . . . .	166
6.5.2	Approximate Solutions of the Volume Rendering Equation . . . . .	167
6.5.3	Examples . . . . .	171
6.6	Isosurface Reconstruction . . . . .	171
6.6.1	Implicit Function Approach versus Marching Cubes . . . . .	171
6.6.2	Examples . . . . .	172

6.7	Conclusions and Future Research . . . . .	175
	Bibliography . . . . .	175
<b>7</b>	<b>An Approach to Intelligent Design of Color Visualizations</b>	<b>179</b>
7.1	Introduction . . . . .	179
7.1.1	The Need for Intelligence . . . . .	179
7.1.2	An Approach to Introducing Intelligence . . . . .	180
7.1.3	A Framework for Demonstration . . . . .	180
7.2	Designing Interfaces for Full Control . . . . .	181
7.2.1	Metadata and Metavisualizations . . . . .	181
7.2.2	Using Metavisualizations for Direct Manipulation . . . . .	181
7.2.3	Examples from the Color Mapping System . . . . .	182
7.3	Incorporating Intelligent Guidance . . . . .	185
7.3.1	Observations . . . . .	185
7.3.2	Models for Guidance . . . . .	186
7.4	Conclusion . . . . .	188
	Bibliography . . . . .	188
<b>8</b>	<b>Engineering Perceptually Effective Visualizations for Abstract Data</b>	<b>191</b>
8.1	Introduction . . . . .	191
8.2	Focus . . . . .	192
8.2.1	Example Data Sets . . . . .	193
8.3	Engineering Design Guidelines . . . . .	195
8.3.1	Guideline One: Task-Specific . . . . .	195
8.3.2	Guideline Two: Reduced Representation . . . . .	196
8.3.3	Guideline Three: Data Encoding . . . . .	199
8.3.4	Guideline Four: Filtering . . . . .	201
8.3.5	Guideline Five: Drill Down . . . . .	202
8.3.6	Guideline Six: Multiple Linked Views . . . . .	202
8.3.7	Guideline Seven: User Interface . . . . .	203
8.3.8	Guideline Eight: Animation and Motion . . . . .	204
8.4	Techniques Under Development . . . . .	204
8.4.1	3D . . . . .	204
8.4.2	Sound . . . . .	205
8.5	Implementation Techniques . . . . .	205
8.6	Related Research . . . . .	206
8.7	Conclusions . . . . .	207
	Bibliography . . . . .	208
<b>9</b>	<b>Studies in Comparative Visualization of Flow Features</b>	<b>211</b>
9.1	Introduction . . . . .	211
9.2	Visualization of Vortices . . . . .	212
9.2.1	Streamlines and Streamribbons . . . . .	213
9.2.2	Evaluation of the Two Techniques . . . . .	215
9.2.3	Techniques of Comparative Visualization . . . . .	217
9.3	Visualization of Shock Waves . . . . .	219

9.4 Visualization of Near-Wall Flow Fields: Simulation and Experiment . . . . 220

9.5 Discussion and Conclusions . . . . . 225

Bibliography . . . . . 226

**10 Toward a Systematic Analysis for Designing Visualizations 229**

10.1 Introduction . . . . . 229

10.2 Conditions on Visualization Mappings - Part I . . . . . 230

10.3 Data Models . . . . . 235

10.4 Display Models . . . . . 238

10.5 Scientific Data and Display Models Based on Lattices . . . . . 240

10.5.1 Lattice Structured Data and Display Models Based on Logic . . . . 241

10.5.2 Order Structures on Data and Display Models Based on Probability 243

10.6 Conditions on Visualization Mappings - Part II . . . . . 244

10.6.1 Conditions on the Structure of Equality . . . . . 244

10.6.2 Conditions on Lattice Structures . . . . . 244

10.6.3 Conditions on Topology Structures . . . . . 245

10.6.4 Conditions on Metric Structures . . . . . 247

10.6.5 Conditions on Algebraic Structures . . . . . 248

10.6.6 Conditions on Symmetry Structures . . . . . 248

10.7 Conclusions . . . . . 249

Bibliography . . . . . 249

**11 Controlled Interpolation for Scientific Visualization 253**

11.1 Introduction . . . . . 253

11.2 A Simple Example . . . . . 254

11.3 Controlling the Interpolation . . . . . 255

11.4 One-Dimensional Interpolation . . . . . 257

11.4.1 Data and Notation . . . . . 257

11.4.2 Piecewise Linear Interpolation . . . . . 257

11.4.3 Piecewise Cubic Interpolation . . . . . 258

11.4.4 Bounded Piecewise Cubic Interpolation . . . . . 259

11.5 Two-Dimensional Interpolation . . . . . 261

11.5.1 Data Arrangement and an Example . . . . . 261

11.5.2 Piecewise Bilinear Interpolation . . . . . 261

11.5.3 Piecewise Bicubic Interpolation . . . . . 262

11.5.4 Bounded Piecewise Bicubic Interpolation . . . . . 265

11.5.5 Blending Functions . . . . . 266

11.5.6 Bounded Blending Functions . . . . . 267

11.6 Three-Dimensional Interpolation . . . . . 268

11.6.1 Data Arrangement and an Example . . . . . 268

11.6.2 Piecewise Trilinear Interpolation . . . . . 270

11.6.3 Piecewise Tricubic Interpolation . . . . . 271

11.6.4 Bounded Piecewise Tricubic Interpolation . . . . . 271

11.6.5 Blending Functions for 3D . . . . . 271

11.6.6 Bounded Blending Functions . . . . . 273

11.7 Conclusions and Future Work . . . . . 274

Bibliography . . . . . 275

**III Techniques and Algorithms 277**

**12 Feature Visualization 279**

12.1 Introduction . . . . . 279  
12.2 Example Domain . . . . . 281  
12.3 Feature Extraction . . . . . 282  
12.4 Abstract Representations . . . . . 283  
12.5 Tracking and Correlation . . . . . 286  
12.6 Analysis and Future Work . . . . . 289  
Bibliography . . . . . 291

**13 Flow Surface Probes for Vector Field Visualization 295**

13.1 Introduction . . . . . 295  
13.2 Related Work . . . . . 296  
13.3 Flow Surface Probes . . . . . 297  
13.4 Implementation Issues . . . . . 298  
    13.4.1 Surface Tessellation . . . . . 299  
    13.4.2 Deformation Paths . . . . . 300  
    13.4.3 Choosing and Placing Seed Surfaces . . . . . 301  
13.5 Examples of Flow Surface Probes . . . . . 301  
    13.5.1 Local Probing of Electrical Charges . . . . . 301  
    13.5.2 Local Probing of Blunt Fin . . . . . 307  
    13.5.3 Time Surfaces of Blunt Fin . . . . . 307  
13.6 Conclusions and Future Work . . . . . 308  
Bibliography . . . . . 309

**14 Particle Tracing Algorithms for 3D Curvilinear Grids 311**

14.1 Introduction . . . . . 311  
14.2 Fundamentals of Particle Tracing . . . . . 312  
    14.2.1 Cartesian Grids . . . . . 312  
    14.2.2 Curvilinear Grids . . . . . 314  
    14.2.3 Restrictions . . . . . 314  
14.3 C-Space Algorithms . . . . . 315  
    14.3.1 Transformation of Positions from  $\mathcal{C}$  to  $\mathcal{P}$  . . . . . 315  
    14.3.2 Transformation of Velocities from  $\mathcal{P}$  to  $\mathcal{C}$  . . . . . 316  
14.4 P-Space Algorithms . . . . . 318  
    14.4.1 Point Location Methods . . . . . 318  
    14.4.2 Interpolation Methods . . . . . 319  
14.5 Implementation and Test Flows . . . . . 321  
14.6 Test Results . . . . . 323  
    14.6.1 Transformation Effect . . . . . 323  
    14.6.2 Interpolation Effect . . . . . 327  
    14.6.3 Speed Comparison . . . . . 327

14.6.4 Discussion . . . . .	328
14.7 Conclusions . . . . .	331
Bibliography . . . . .	331
A14 Appendix . . . . .	333
<b>15 Adaptive Generation of Contour Surfaces in Volume Data</b>	<b>337</b>
15.1 Introduction . . . . .	337
15.2 Adaptive Trilinear Interpolation . . . . .	339
15.2.1 The Trilinear Splitting Box Algorithm . . . . .	339
15.2.2 The Problem of Cracks . . . . .	341
15.2.3 Approximating Trilinear Patches by Polygons . . . . .	341
15.3 Experimental Results . . . . .	341
15.4 Improvements . . . . .	348
15.5 A Lower Bound . . . . .	349
15.6 Discussion . . . . .	354
Bibliography . . . . .	355
A15 The Trilinear Box Algorithm . . . . .	356
<b>16 Visualization of Deformation Tensor Fields</b>	<b>357</b>
16.1 Introduction . . . . .	357
16.2 Tensor Fields—A Mathematical Concept . . . . .	357
16.3 Visualization of Deformation Tensor Fields . . . . .	359
16.3.1 Generalized Focal Surfaces—Basic Concepts . . . . .	360
16.3.2 Deformation Tensor Interrogation . . . . .	360
16.3.3 Characteristic Curves for Deformation Tensor Visualization . . . . .	363
16.4 Visual Interrogation of Bendings . . . . .	365
16.4.1 Infinitesimal Bendings—Fundamentals: . . . . .	366
16.4.2 Visualizing Bending Stability . . . . .	369
Bibliography . . . . .	371
<b>17 An Alchemist's Primer on Reaction-Diffusion Patterns</b>	<b>373</b>
17.1 Introduction . . . . .	373
17.2 Turing's Work . . . . .	374
17.3 Cellular Automata . . . . .	374
17.3.1 Three-Dimensional Cellular Automata . . . . .	375
17.3.2 Visualizing Three-Dimensional Cellular Automata . . . . .	375
17.4 Reaction-Diffusion Systems . . . . .	375
17.4.1 Mammalian Coat Patterns . . . . .	377
17.4.2 Waves in Excitable Media . . . . .	377
17.4.3 Further Chemical Self-Organization Reactions . . . . .	377
17.4.4 Drosophila Morphogenesis . . . . .	377
17.4.5 Computer Simulations . . . . .	377
17.5 Reaction-Diffusion Equations . . . . .	378
17.5.1 One-Dimensional Reaction-Diffusion Systems . . . . .	378
17.5.2 Visualizing One-Dimensional Reaction-Diffusion Systems . . . . .	378
17.5.3 Evolution of the One-Dimensional Reaction-Diffusion System . . . . .	379

17.5.4	Two-Dimensional Reaction-Diffusion Systems . . . . .	379
17.5.5	Visualizing Two-Dimensional Reaction-Diffusion Systems . . . . .	379
17.5.6	Evolution of a Two-Dimensional Reaction-Diffusion System . . . . .	380
17.5.7	Anisotropic Two-Dimensional Reaction-Diffusion Systems . . . . .	380
17.5.8	Three-Dimensional Reaction-Diffusion Systems . . . . .	380
17.5.9	Visualizing Three-Dimensional Reaction-Diffusion Systems: . . . . .	382
17.5.10	Example of a Three-Dimensional Reaction-Diffusion System . . . . .	382
17.5.11	Anisotropic Three-Dimensional Reaction-Diffusion Systems . . . . .	383
17.6	Characteristics of Solid Texture Functions . . . . .	383
17.6.1	Properties of a Solid Texture Function . . . . .	383
17.7	The Rendering Environment . . . . .	384
17.7.1	OATS Implementation . . . . .	385
17.7.2	A Small OATS File . . . . .	385
17.7.3	The Flexibility of OATS . . . . .	386
17.8	Conclusions . . . . .	386
17.8.1	Cellular Automata . . . . .	386
17.8.2	Reaction-Diffusion Systems . . . . .	387
17.8.3	Texturing with the Reaction-Diffusion Data Sets . . . . .	387
17.8.4	Final Remarks . . . . .	389
17.9	Future Research . . . . .	389
17.9.1	Fractal Characteristics . . . . .	389
17.9.2	Physical Phenomena . . . . .	389
	Bibliography . . . . .	390
A17	A Complete Example of an OATS File . . . . .	392
<b>18</b>	<b>Singularities on the World Sheets of Open Relativistic Strings</b>	<b>395</b>
18.1	Introduction . . . . .	395
18.2	The Problem . . . . .	397
18.3	Visualization Technology . . . . .	399
18.4	Results . . . . .	401
18.5	Future Plans . . . . .	409
	Bibliography . . . . .	413
<b>19</b>	<b>Hierarchical Representation of Very Large Data Sets Using Wavelets</b>	<b>415</b>
19.1	Introduction . . . . .	415
19.2	Motivation . . . . .	416
19.3	Data Resolutions Versus Image Resolutions . . . . .	416
19.4	Hierarchical Multiresolution Data Access . . . . .	417
19.5	Definition of Hierarchy . . . . .	418
19.6	Wavelet Overview . . . . .	419
19.6.1	Hierarchical Representation Using Wavelet . . . . .	419
19.6.2	Memory Management for Wavelet Transforms . . . . .	420
19.7	Applications of Wavelet Transforms . . . . .	421
19.7.1	Wavelet Decomposition . . . . .	421
19.7.2	Wavelet Reconstructions . . . . .	422
19.8	Multiresolution Wavelet Analysis Tool . . . . .	425

19.9	Conclusions and Future Directions . . . . .	426
	Bibliography . . . . .	427
