Chapter 1	Introduction to code verification	1
Chapter 2	The mathematical model and numerical algorithm.....	7
2.1	The mathematical model.....	7
2.2	Numerical methods for solving differential equations.....	10
2.2.1	Terminology.....	10
2.2.2	A finite difference example.....	11
2.2.3	Numerical issues	12
2.2.3.1	Lax equivalence theorem.....	13
2.2.3.2	Asymptotic regime	13
2.2.3.3	The discrete system	14
2.2.4	Code order verification.....	16
2.2.4.1	Definition: Code order verification.....	16
Chapter 3	The order-verification procedure (OVMSP).....	19
3.1	Static testing	19
3.2	Dynamic testing.....	20
3.3	Overview of the order-verification procedure.....	21
3.4	Details of the procedure	23
3.4.1	Getting started (Steps 1-3)	23
3.4.2	Running the tests to obtain the error (Steps 4–5)	24
3.4.2.1	Calculating the global discretization error.....	24
3.4.2.2	Refinement of structured grids	26
3.4.2.3	Refinement of unstructured grids.....	28
3.4.3	Interpret the results of the tests (Steps 6–10)	29
3.5	Closing remarks	33
Chapter 4	Design of coverage test suite	35
4.1	Basic design issues	35
4.2	Coverage issues related to boundary conditions.....	38
4.3	Coverage issues related to grids and grid refinement.....	40
Chapter 5	Finding exact solutions.....	41
5.1	Obtaining exact solutions from the forward problem	41
5.2	The method of manufactured exact solutions.....	43

5.2.1	Guidelines for creating manufactured solutions	44
5.2.2	Guidelines for construction of the coefficients.....	45
5.2.3	Example: Creation of a manufactured solution	46
5.2.4	Treatment of auxiliary conditions.....	48
5.2.4.1	Treatment of the initial condition	48
5.2.4.2	Treatment of the problem domain.....	49
5.2.4.3	Treatment of the boundary conditions.....	49
5.2.5	A closer look at source terms	54
5.2.5.1	Heat equation with no source term.....	55
5.2.5.2	Steady incompressible flow with no source term	56
5.2.5.3	Closing remarks on source terms	58
5.2.6	Physical realism of exact solutions.....	58
Chapter 6	Benefits of the order-verification procedure	59
6.1	A taxonomy of coding mistakes	59
6.2	A simple PDE code.....	62
6.3	Blind tests.....	65
Chapter 7	Related code-development activities.....	69
7.1	Numerical algorithm development	69
7.2	Testing for code robustness	70
7.3	Testing for code efficiency.....	71
7.4	Code confirmation exercises	71
7.5	Solution verification	72
7.6	Code validation.....	73
7.7	Software quality engineering.....	74
Chapter 8	Sample code-verification exercises.....	75
8.1	Burgers' equations in Cartesian coordinates (Code 1).....	75
8.1.1	Steady solution with Dirichlet boundary conditions.....	76
8.1.2	Steady solution with mixed Neumann and Dirichlet conditions.....	77
8.2	Burgers' equations in curvilinear coordinates (Code 2).....	79
8.2.1	Steady solution	80
8.2.2	Unsteady solution	80
8.3	Incompressible Navier-Stokes (Code 3).....	82
8.4	Compressible Navier-Stokes (Code 4)	84
Chapter 9	Advanced topics.....	89
9.1	Computer platforms.....	89
9.2	Lookup tables.....	89
9.3	Automatic time-stepping options	90
9.4	Hardwired boundary conditions	91
9.5	Codes with artificial dissipation terms.....	92
9.6	Eigenvalue problems.....	94

9.7	Solution uniqueness	94
9.8	Solution smoothness	95
9.9	Codes with shock-capturing schemes.....	96
9.10	Dealing with codes that make nonordered approximations	97
Chapter 10 Summary and conclusions.....		99
