Imperial College Press

Contents

Preface

v

1 Relativistic Gravity

| | | |
|--------|--------------------------------------|----|
| 1.1 | What is a black hole? | 1 |
| 1.2 | Why study black holes? | 3 |
| 1.3 | Elements of general relativity | 3 |
| 1.3.1 | The principle of equivalence | 3 |
| 1.3.2 | The Newtonian affine connection | 4 |
| 1.3.3 | Newtonian gravity | 5 |
| 1.3.4 | Metrics in relativity | 6 |
| 1.3.5 | The velocity and momentum 4-vector | 7 |
| 1.3.6 | General vectors and tensors | 8 |
| 1.3.7 | Locally measured physical properties | 9 |
| 1.3.8 | Derivatives in relativity | 9 |
| 1.3.9 | Acceleration 4-vector | 11 |
| 1.3.10 | Paths of light | 11 |
| 1.3.11 | Einstein's field equations | 11 |
| 1.3.12 | Symmetry and Killing's equation | 11 |

2 Spherical Black Holes

| | | |
|-------|---|----|
| 2.1 | The Schwarzschild metric | 13 |
| 2.1.1 | Coordinates | 14 |
| 2.1.2 | Proper distance | 15 |
| 2.1.3 | Proper time | 15 |
| 2.1.4 | Redshift | 15 |
| 2.1.5 | Interpretation of M and geometric units | 16 |
| 2.1.6 | The Schwarzschild radius | 16 |
| 2.1.7 | The event horizon | 17 |
| 2.1.8 | Birkoff's theorem | 17 |
| 2.1.9 | Israel's theorem | 17 |
| 2.2 | Orbits in Newtonian gravity | 18 |
| 2.2.1 | Energy | 18 |

| | | |
|--------|--|----|
| 2.2.2 | Angular momentum | 18 |
| 2.2.3 | The Newtonian effective potential | 18 |
| 2.2.4 | Classification of Newtonian orbits | 18 |
| 2.3 | Particle orbits in the Schwarzschild metric | 19 |
| 2.3.1 | Constants of the motion | 19 |
| 2.3.2 | Energy | 20 |
| 2.3.3 | Angular momentum | 20 |
| 2.3.4 | The effective potential | 21 |
| 2.3.5 | Newtonian approximation to the metric | 22 |
| 2.3.6 | Classification of orbits | 22 |
| 2.3.7 | Radial infall | 23 |
| 2.3.8 | The locally measured energy of a particle | 24 |
| 2.3.9 | Circular orbits | 25 |
| 2.3.10 | Comparison with Newtonian orbits | 26 |
| 2.3.11 | Orbital velocity in the frame of a hovering observer | 27 |
| 2.3.12 | Energy in the last stable orbit | 27 |
| 2.4 | Orbits of light rays | 28 |
| 2.4.1 | Radial propagation of light | 29 |
| 2.4.2 | Capture cross-section for light | 29 |
| 2.4.3 | The view of the sky for a stationary observer | 30 |
| 2.5 | Classical tests | 31 |
| 2.6 | Falling into a black hole | 32 |
| 2.6.1 | Free-fall time for a distant observer | 32 |
| 2.6.2 | Light-travel time | 34 |
| 2.6.3 | What the external observer sees | 34 |
| 2.6.4 | An infalling observer's time | 35 |
| 2.6.5 | What the infalling observer feels | 35 |
| 2.7 | Capture by a black hole | 36 |
| 2.7.1 | Case I: Capture of high angular momentum particles | 37 |
| 2.7.2 | Case II: Capture of low energy particles | 37 |
| 2.8 | Surface gravity of a black hole | 38 |
| 2.8.1 | The proper acceleration of a hovering observer | 38 |
| 2.8.2 | Surface gravity | 39 |
| 2.8.3 | Rindler coordinates | 39 |
| 2.9 | Other coordinates | 41 |
| 2.9.1 | Null coordinates | 42 |
| 2.9.2 | Eddington–Finkelstein coordinates | 42 |
| 2.10 | Inside the black hole | 43 |
| 2.10.1 | The infalling observer | 44 |
| 2.11 | White holes | 45 |
| 2.12 | Kruskal coordinates | 46 |
| 2.12.1 | The singularities at $r = 0$ and cosmic censorship | 47 |

| | | |
|----------|---|-----------|
| 2.12.2 | The spacetime of a collapsing star | 48 |
| 2.13 | Embedding diagrams | 49 |
| 2.14 | Asymptotic flatness | 51 |
| 2.14.1 | The Penrose–Carter diagram for the Schwarzschild metric | 52 |
| 2.14.2 | The Penrose–Carter diagram for the Newtonian metric | 52 |
| 2.15 | Non-isolated black holes | 53 |
| 2.15.1 | The infinite redshift surface | 53 |
| 2.15.2 | Trapped surfaces | 54 |
| 2.15.3 | Apparent horizon | 54 |
| 2.16 | The membrane paradigm | 55 |
| 3 | Rotating Black Holes | 57 |
| 3.1 | The Kerr metric | 58 |
| 3.2 | The event horizon | 58 |
| 3.2.1 | The circumference of the event horizon | 59 |
| 3.2.2 | The area of the event horizon | 59 |
| 3.3 | Properties of the Kerr metric coefficients | 60 |
| 3.3.1 | Identities | 60 |
| 3.3.2 | Contravariant components | 60 |
| 3.4 | Interpretation of m , a and geometric units | 61 |
| 3.5 | Extreme Kerr black hole | 62 |
| 3.6 | Robinson’s theorem | 62 |
| 3.7 | Particle orbits in the Kerr geometry | 62 |
| 3.7.1 | Constants of the motion | 63 |
| 3.7.2 | Energy | 64 |
| 3.7.3 | Angular momentum | 64 |
| 3.7.4 | The Carter integral | 64 |
| 3.7.5 | The radial equation | 65 |
| 3.7.6 | The effective potential | 65 |
| 3.8 | Frame-dragging | 66 |
| 3.8.1 | Orbits of zero angular momentum particles | 68 |
| 3.8.2 | Orbits with non-zero angular momentum | 68 |
| 3.9 | Zero angular momentum observers (ZAMOs) | 69 |
| 3.9.1 | Some applications of ZAMOs | 70 |
| 3.10 | Photon orbits | 72 |
| 3.10.1 | The photon effective potential | 72 |
| 3.10.2 | Azimuthal motion | 73 |
| 3.10.3 | Photon capture cross-section | 73 |
| 3.11 | The static limit surface | 74 |
| 3.12 | The infinite redshift surface | 76 |
| 3.13 | Circular orbits in the equatorial plane | 76 |
| 3.13.1 | Innermost (marginally) stable circular orbit | 77 |

| | | |
|----------|---|------------|
| 3.13.2 | Period of a circular orbit | 79 |
| 3.13.3 | Energy of the innermost stable orbit | 80 |
| 3.13.4 | Angular momentum of the innermost stable orbit | 81 |
| 3.13.5 | Marginally bound orbits | 81 |
| 3.13.6 | Unbound orbits | 81 |
| 3.14 | Polar orbits | 82 |
| 3.14.1 | Orbital period | 84 |
| 3.15 | The ergosphere | 85 |
| 3.15.1 | Negative energy orbits | 85 |
| 3.15.2 | Angular momentum of a negative energy particle | 86 |
| 3.15.3 | The Penrose process | 87 |
| 3.15.4 | Realising the Penrose process | 87 |
| 3.16 | Spinning up a black hole | 89 |
| 3.16.1 | From Schwarzschild to extreme Kerr black hole | 91 |
| 3.17 | Other coordinates | 92 |
| 3.18 | Penrose–Carter diagram | 93 |
| 3.18.1 | Interior solutions and collapsing stars | 97 |
| 3.19 | Closed timelike lines | 97 |
| 3.20 | Charged black holes | 98 |
| 4 | Black Hole Thermodynamics | 103 |
| 4.1 | Black hole mechanics | 103 |
| 4.1.1 | Surface gravity | 103 |
| 4.1.2 | Redshift | 105 |
| 4.1.3 | Conservation of energy | 106 |
| 4.2 | The area of a Kerr black hole horizon cannot decrease | 107 |
| 4.2.1 | Area change by accretion | 107 |
| 4.2.2 | Area change produced by the Penrose process | 108 |
| 4.2.3 | The area theorem | 109 |
| 4.2.4 | Irreducible mass | 109 |
| 4.2.5 | Maximum energy extraction | 109 |
| 4.2.6 | Naked singularities | 110 |
| 4.3 | Scattering of waves | 110 |
| 4.3.1 | Superradiance | 110 |
| 4.4 | Thermodynamics | 116 |
| 4.4.1 | Horizon temperature | 118 |
| 4.4.2 | The four laws of black hole thermodynamics | 120 |
| 4.5 | Hawking radiation | 121 |
| 4.5.1 | Introduction | 121 |
| 4.5.2 | Casimir effect | 122 |
| 4.5.3 | Thermal vacua in accelerated frames | 122 |
| 4.5.4 | Hawking radiation | 127 |

| | | |
|---------------------|--|------------|
| 4.6 | Properties of radiating black holes | 131 |
| 4.6.1 | Entropy and temperature | 131 |
| 4.6.2 | Radiating black holes | 132 |
| 4.6.3 | Black hole in a box | 133 |
| 4.7 | Entropy and microstates | 134 |
| 5 | Astrophysical Black Holes | 137 |
| 5.1 | Introduction | 137 |
| 5.2 | Stellar mass black holes | 138 |
| 5.2.1 | Formation | 138 |
| 5.2.2 | Finding stellar mass black holes | 140 |
| 5.2.3 | The black hole at the centre of the Galaxy | 141 |
| 5.3 | Supermassive black holes in other galaxies | 142 |
| 5.3.1 | Intermediate mass black holes | 143 |
| 5.3.2 | Mini black holes | 144 |
| 5.4 | Further evidence for black hole spin | 145 |
| 5.5 | Conclusions | 146 |
| References | | 147 |
| Bibliography | | 151 |
| Index | | 153 |
