Introduction	<i>page</i> 1
1 Elementary transformations of the Euclidean plane and the Riemann sphere	5
1.1 The Euclidean metric	5
1.2 Rigid motions	6
1.2.1 Scaling maps	8
1.3 Conformal mappings	9
1.4 The Riemann sphere	11
1.5 Möbius transformations and the cross ratio	13
1.5.1 Classification of Möbius transformations	18
1.6 Möbius groups	22
1.7 Discreteness of Möbius groups	24
1.8 The Euclidean density	26
1.8.1 Other Euclidean type densities	31
2 Hyperbolic metric in the unit disk	32
2.1 Definition of the hyperbolic metric in the unit disk	32
2.1.1 Hyperbolic geodesics	33
2.1.2 Hyperbolic triangles	39
2.2 Properties of the hyperbolic metric in Δ	41
2.3 The upper half plane model	43
2.4 The geometry of $PSL(2, \mathbb{R})$ and Γ	46
2.4.1 Hyperbolic transformations	46
2.4.2 Parabolic transformations	48
2.4.3 Elliptic transformations	50
2.4.4 Hyperbolic reflections	51

3	Holomorphic functions	53
3.1	Basic theorems	53
3.2	The Schwarz lemma	55
3.3	Normal families	58
3.4	The Riemann mapping theorem	59
3.5	The Schwarz reflection principle	63
3.6	Rational maps and Blaschke products	64
3.7	Distortion theorems	66
4	Topology and uniformization	68
4.1	Surfaces	68
4.2	The fundamental group	70
4.3	Covering spaces	74
4.4	Construction of the universal covering space	78
4.5	The universal covering group	80
4.6	The uniformization theorem	81
5	Discontinuous groups	83
5.1	Discontinuous subgroups of \mathcal{M}	83
5.2	Discontinuous elementary groups	90
5.3	Non-elementary groups	94
6	Fuchsian groups	96
6.1	An historical note	96
6.2	Fundamental domains	97
6.3	Dirichlet domains and fundamental polygons	101
6.4	Vertex cycles of fundamental polygons	110
6.5	Poincaré's theorem	115
7	The hyperbolic metric for arbitrary domains	124
7.1	Definition of the hyperbolic metric	124
7.2	Properties of the hyperbolic metric for X	127
7.3	The Schwarz–Pick lemma	130
7.4	Examples	133
7.5	Conformal density and curvature	139
7.6	Conformal invariants	141
7.6.1	Torus invariants	141
7.6.2	Extremal length	143
7.6.3	General Riemann surfaces	147
7.7	The collar lemma	148

8	The Kobayashi metric	153
8.1	The classical Kobayashi density	153
8.2	The Kobayashi density for arbitrary domains	154
8.2.1	Generalized Kobayashi density: basic properties	155
8.2.2	Examples	161
9	The Carathéodory pseudo-metric	163
9.1	The classical Carathéodory density	163
9.2	Generalized Carathéodory pseudo-metric	165
9.2.1	Generalized Carathéodory density: basic properties	166
9.2.2	Examples	170
10	Inclusion mappings and contraction properties	172
10.1	Estimates of hyperbolic densities	172
10.2	Strong contractions	173
10.3	Lipschitz domains	175
10.4	Generalized Lipschitz and Bloch domains	180
10.4.1	Kobayashi Lipschitz domains	180
10.4.2	Kobayashi Bloch domains	182
10.4.3	Carathéodory Lipschitz domains	182
10.4.4	Carathéodory Bloch domains	184
10.5	Examples	184
11	Applications I: forward random holomorphic iteration	191
11.1	Random holomorphic iteration	191
11.2	Forward iteration	192
12	Applications II: backward random iteration	195
12.1	Compact subdomains	195
12.2	Non-compact subdomains: the $c\kappa$ -condition	196
12.3	The overall picture	198
13	Applications III: limit functions	201
13.1	Uniqueness of limits	201
13.1.1	The key lemma	201
13.1.2	Proof of Theorem 13.1.1	203
13.2	Non-Bloch domains and non-constant limits	207
13.2.1	Preparatory lemmas	207
13.2.2	A necessary condition for degeneracy	208

13.2.3	Proof of Theorem 13.2.2	215
13.2.4	Equivalence of conditions	217
14	Estimating hyperbolic densities	219
14.1	The smallest hyperbolic densities	219
14.2	A formula for ρ_{01}	220
14.3	A lower bound on ρ_{01}	223
14.3.1	The first estimates	224
14.3.2	Estimates of ρ_{01} near the punctures	229
14.3.3	The derivatives of ρ_{01}	230
14.3.4	The existence of a lower bound on ρ_{01}	234
14.4	Properties of the smallest hyperbolic density	236
14.5	Comparing Poincaré densities	240
15	Uniformly perfect domains	245
15.1	Simple examples	246
15.2	Uniformly perfect domains and cross ratios	247
15.3	Uniformly perfect domains and separating annuli	249
15.4	Uniformly thick domains	253
16	Appendix: a brief survey of elliptic functions	258
16.0.1	Basic properties of elliptic functions	258
	<i>Bibliography</i>	264
	<i>Index</i>	268
