

GRAMMATICAL  
COMPLEXITY AND  
**ONE-DIMENSIONAL  
DYNAMICAL SYSTEMS**

Huimin Xie

*Suzhou Univ. China*

# Contents

<b>Preface</b>	v
<b>Part I: Strings and Languages</b>	<b>1</b>
<b>1 Free Monoids</b>	<b>3</b>
1.1 Free Monoids and Strings	3
1.1.1 Definition of Monoids	3
1.1.2 Free Monoids	5
1.1.3 Primitive Strings	6
1.1.4 Cyclic Shifts of Strings	7
1.1.5 Other Operators and Notations	7
1.2 An Ordered Free Monoid	8
1.2.1 An Order Relation on the Monoid $\{0, 1\}^*$	8
1.2.2 Maximal Strings	8
1.2.3 Maximal and Primitive Strings	9
<b>2 Dynamical Languages</b>	<b>13</b>
2.1 Definition of Dynamical Languages	14
2.2 Distinct Excluded Blocks	15
2.2.1 Definition and Properties	15
2.2.2 $L$ and $L''$ in Chomsky Hierarchy	17
2.2.3 A Natural Equivalence Relation	19
2.3 Symbolic Flows	21
2.3.1 Symbolic Flows and Dynamical Languages	21
2.3.2 Subshifts of Finite Type	23
2.3.3 Sofic Systems	25
2.4 Graphs and Dynamical Languages	26
2.4.1 Graphs and Shannon-Graphs	27
2.4.2 Transitive Languages	29
2.5 Topological Entropy	33

<b>Part II: Grammatical Complexity of Unimodal Maps</b>	<b>37</b>
<b>3 Languages of Unimodal Maps</b>	<b>39</b>
3.1 Unimodal Maps . . . . .	39
3.1.1 Definition and Terminology . . . . .	39
3.1.2 Logistic Map and Tent Map . . . . .	41
3.1.3 Simple Models with Complicated Dynamics . . . . .	42
3.2 Symbolic Dynamics . . . . .	43
3.2.1 A Brief History . . . . .	43
3.2.2 Itinerary and Kneading Sequence . . . . .	44
3.2.3 An Order Relation of Sequences . . . . .	45
3.2.4 Conditions of being Itinerary . . . . .	47
3.3 Definition of Languages . . . . .	50
3.3.1 Admissible Sequences . . . . .	50
3.3.2 The Language $\mathcal{L}(KS)$ . . . . .	51
3.3.3 Each Word is "Real" . . . . .	51
3.3.4 $\mathcal{L}(KS)$ are Dynamical Languages . . . . .	54
3.4 Some Facts of Strings for a Given Kneading Sequence . . . . .	55
3.4.1 Prefix-Suffixes with respect to Kneading Sequence . . . . .	55
3.4.2 Conditions for $x \in \mathcal{L}(KS)$ . . . . .	56
3.4.3 $\mathcal{L}(KS)$ when $KS$ contains $c$ . . . . .	57
3.4.4 Two Lemmas about Dual Strings . . . . .	57
3.5 Periodic Sequences and Periodic Orbits . . . . .	58
3.5.1 Periodic Sequences which are Itineraries . . . . .	58
3.5.2 Complexity of Windows . . . . .	60
<b>4 Regular Languages of Unimodal Maps</b>	<b>63</b>
4.1 Some Examples . . . . .	63
4.1.1 The Surjective Unimodal Map . . . . .	63
4.1.2 More Examples . . . . .	66
4.2 Decide Regularity from Kneading Sequence . . . . .	68
4.2.1 Calculations of Equivalence Classes . . . . .	68
4.2.2 The Role of Prefixes of Kneading Sequence . . . . .	70
4.2.3 The Necessary Part of Theorem 4.2.1 . . . . .	70
4.2.4 The Maximal Path in minDFA . . . . .	73
4.2.5 The Sufficient Part of Theorem 4.2.1 . . . . .	75
4.3 Minimum States DFA for Periodic Kneading Sequence . . . . .	77
4.3.1 Calculation of the Index of $R_L$ . . . . .	78
4.3.2 Construction of minDFA for $KS = x^\infty$ . . . . .	80
4.3.3 Some Examples . . . . .	81
4.4 Minimum States DFA for Eventually Periodic Kneading Sequence . . . . .	83
4.4.1 Some Lemmas . . . . .	83
4.4.2 Calculation of the Index of $R_L$ . . . . .	84

4.4.3	Some Examples . . . . .	87
4.4.4	Construction of minDFA for $KS = \rho\lambda^\infty$ . . . . .	88
4.5	Composition Laws and Self-Similarity . . . . .	91
4.5.1	The *-Composition Law . . . . .	91
4.5.2	Self-Similarity . . . . .	92
4.5.3	The Generalized Composition Laws . . . . .	94
<b>5</b>	<b>A General Discussion of Kneading Sequences</b> . . . . .	<b>97</b>
5.1	Maximal Primitive Prefixes of Kneading Sequences . . . . .	97
5.1.1	Existence of Special Prefixes of Kneading Sequences . . . . .	98
5.1.2	Odd Maximal Primitive Prefixes of Kneading Sequences . . . . .	99
5.1.3	Kneading Maps . . . . .	100
5.2	Infinite Automata of Unimodal Maps . . . . .	103
5.2.1	Infinite Automata . . . . .	103
5.2.2	Some Examples . . . . .	104
5.3	Density of Periodic Kneading Sequences . . . . .	106
5.3.1	Regard Kneading Sequence as a Limit . . . . .	106
5.3.2	Density of Periodic Kneading Sequences . . . . .	107
5.4	Existence of Uncomputable Complexity . . . . .	108
5.4.1	Uncountable Infinity of Kneading Sequences . . . . .	108
5.4.2	Some Lemmas . . . . .	109
5.4.3	Proof of Propositions 5.4.1 and 5.4.2 . . . . .	110
<b>6</b>	<b>Non-Regular Languages of Unimodal Maps</b> . . . . .	<b>111</b>
6.1	The Language of Feigenbaum Attractor . . . . .	111
6.1.1	Renormalization and Kneading Sequence $t_\infty$ of Feigenbaum Attractor . . . . .	112
6.1.2	Some Properties of $t_\infty$ . . . . .	116
6.1.3	The Non-Regularity of $\mathcal{L}(t_\infty)$ . . . . .	118
6.1.4	The Thue-Morse Sequence . . . . .	118
6.2	Grammatical Level of Feigenbaum Attractor . . . . .	120
6.2.1	Structure of Language $L = \mathcal{L}(t_\infty)$ . . . . .	120
6.2.2	$L$ is not a Context-Free Language . . . . .	122
6.2.3	$L$ is a Context-Sensitive Language . . . . .	123
6.3	The Approach of Fibonacci Sequences . . . . .	126
6.3.1	Fibonacci Sequences and Cyclic Shifts . . . . .	126
6.3.2	Calculation of Cyclic Numbers . . . . .	129
6.3.3	Proof of Theorem 6.3.13 . . . . .	134
6.4	Homomorphisms on Free Submonoids . . . . .	136
6.4.1	Two Special Kinds of Homomorphisms . . . . .	136
6.4.2	A More General Route . . . . .	139

<b>7</b>	<b>DEB of Unimodal Maps</b>	145
7.1	A General Discussion . . . . .	145
7.1.1	Criterion of being DEB . . . . .	145
7.1.2	Finding the Next DEB . . . . .	146
7.2	Structure of Regular $L''$ . . . . .	147
7.2.1	Finite Complement Languages $\mathcal{L}(KS)$ . . . . .	147
7.2.2	Semilinear Structure of Regular $L''$ . . . . .	148
7.2.3	Calculation of Regular $L''$ . . . . .	149
7.3	Complexity Levels of $L$ and $L''$ . . . . .	151
7.4	DEB of Non-Regular Languages . . . . .	154
7.4.1	DEB of Feigenbaum Attractor . . . . .	154
7.4.2	DEB of Even Fibonacci Languages . . . . .	155
7.4.3	DEB of Odd Fibonacci Languages . . . . .	156
7.4.4	Distribution of DEB . . . . .	159
<b>8</b>	<b>Topological Entropy of Unimodal Maps</b>	161
8.1	Introduction . . . . .	161
8.1.1	Growth Number and Entropy . . . . .	161
8.1.2	The Sequence $\{S_n\}$ . . . . .	162
8.1.3	Kneading Sequences and Entropy . . . . .	163
8.1.4	Some Examples . . . . .	163
8.2	General Recursive Relations of $\{S_n\}$ . . . . .	165
8.2.1	The Main Theorem . . . . .	166
8.2.2	Difference Equation for Periodic $KS$ . . . . .	168
8.2.3	Difference Equation for Eventually Periodic $KS$ . . . . .	169
8.3	Kneading Invariant . . . . .	170
8.4	Applications . . . . .	172
8.4.1	A Theorem of Bowen and Frank . . . . .	172
8.4.2	Unimodal Maps with Positive Entropy . . . . .	174
8.4.3	Periodic Orbits with Odd Primitive Period . . . . .	175
8.4.4	Constant Entropy in Window . . . . .	176
<b>Part III: Grammatical Complexity of Circle Homeomorphisms</b>		179
<b>9</b>	<b>Languages of Circle Homeomorphisms</b>	181
9.1	Definition of Languages . . . . .	182
9.2	Rotation Number and Entropy . . . . .	185
9.2.1	Rotation Number of Circle Homeomorphisms . . . . .	185
9.2.2	Topological Entropy of Circle Homeomorphisms . . . . .	187
9.3	Nested Block Structure . . . . .	188
9.3.1	Existence of Nested Block Structure . . . . .	188
9.3.2	Farey Tree and Continued Fraction . . . . .	191
9.3.3	Relation of Nested Block Structure with Farey Address . . . . .	194

<b>10 Complexity Levels of Circle Homeomorphisms</b>	197
10.1 Regular Languages for Rational Rotation Numbers	197
10.1.1 Properties of Basic Word	198
10.1.2 Proof of Theorem 10.1.1	199
10.2 Non-Regular Languages for Irrational Rotation Numbers	201
10.3 The Case of Golden Mean Ratio	205
<b>11 Automata of Circle Homeomorphisms</b>	209
11.1 Finite Automata of Circle Homeomorphisms	209
11.2 Infinite Automata of Circle Homeomorphisms	213
11.3 Universal Structure of Automata of Circle Homeomorphisms	215
11.3.1 Main Results	216
11.3.2 Strings $h_1 \cdots h_k(1)$ and $h_1 \cdots h_k(0)$	217
11.3.3 Square Prefixes of $K_+$	218
11.3.4 Calculation of $\{x_n\}$	219
11.3.5 Calculation of Prefixes of the First Kind	221
11.3.6 Proof of Theorem 11.3.2	222
11.3.7 Proof of Theorem 11.3.3	224
<b>Appendices</b>	227
<b>A Finite Automata and Regular Languages</b>	227
A.1 Finite Automata	227
A.1.1 Deterministic Finite Automata	227
A.1.2 Extensions of DFA	229
A.1.3 Transition Diagrams of FA	230
A.2 Grammars and Expressions	231
A.2.1 Right-Linear Grammars	231
A.2.2 Regular Expressions	232
A.3 Minimum States DFA	233
A.3.1 A Natural Equivalence Relation $R_L$	234
A.3.2 The Role of $R_L$	234
A.3.3 The Myhill-Nerode Theorem	235
A.3.4 Applications	237
A.4 Properties of Regular Languages	238
A.4.1 Pumping Lemma of Regular Languages	239
A.4.2 Closure Properties	239
<b>B Non-Regular Languages</b>	241
B.1 Turing Machines	241
B.1.1 Definitions	241
B.1.2 Recursively Enumerable Languages	242
B.1.3 Recursive Languages	244

<i>B.1.4</i>	Linear Bounded Automata . . . . .	245
<i>B.1.5</i>	Pushdown Automata . . . . .	246
B.2	Languages Generated by Grammars . . . . .	247
<i>B.2.1</i>	The Chomsky Hierarchy . . . . .	247
<i>B.2.2</i>	Context-Free Languages . . . . .	248
<i>B.2.3</i>	Pumping Lemma of Context-Free Languages . . . . .	249
<i>B.2.4</i>	The Ogden Lemma . . . . .	250
<i>B.2.5</i>	Two Theorems related CFL and RGL . . . . .	250
<i>B.2.6</i>	Context-Sensitive Languages . . . . .	251
<b>C</b>	<b>L Systems and Languages</b> . . . . .	<b>253</b>
C.1	Definitions of Some L Systems and Languages . . . . .	253
<i>C.1.1</i>	D0L Languages . . . . .	253
<i>C.1.2</i>	0L Languages . . . . .	255
<i>C.1.3</i>	T0L Languages . . . . .	256
<i>C.1.4</i>	ET0L Languages . . . . .	256
C.2	Relations with Chomsky Hierarchy . . . . .	257
<i>C.2.1</i>	Languages between CFL and CSL . . . . .	257
<i>C.2.2</i>	Full Abstract Family of Languages . . . . .	257
	<b>References</b> . . . . .	<b>259</b>
	<b>Symbols Index</b> . . . . .	<b>269</b>
	<b>Subject Index</b> . . . . .	<b>271</b>
