Contents

<i>Preface</i>	v
1. Introduction	1
2. Lipschitz partitions of unity	5
3. Deformations on locally convex topological vector spaces	15
4. Critical point theorems	25
5. Homoclinics in Hamiltonian systems	35
5.1 Existence and multiplicity results for periodic Hamiltonians	35
5.2 Spectrum of the Hamiltonian operator	39
5.3 Variational setting	41
5.4 Linking structure	42
5.5 The (C) sequences	45
5.6 Proofs of the main results	53
5.7 Non periodic Hamiltonians	54
5.7.1 Variational setting	56
5.7.2 Linking structure	60
5.7.3 The (C) -condition	62
5.7.4 Proof of Theorem 5.3	65
6. Standing waves of nonlinear Schrödinger equations	67
6.1 Introduction and results	67
6.2 Preliminaries	71
6.3 The linking structure	72
6.4 The (C) sequences	74
6.5 Proofs of the existence and multiplicity	81
6.6 Semiclassical states of a system of Schrödinger equations	82

6.6.1	An equivalent variational problem	84
6.6.2	Proofs of Theorem 6.5	88
6.6.3	Proof of Theorem 6.6	93
7.	Solutions of nonlinear Dirac equations	97
7.1	Relative studies	97
7.2	Existence results for scalar potentials	100
7.3	Variational setting	103
7.4	The asymptotically quadratic case	106
7.5	Super-quadratic case	116
7.6	More general external fields	121
7.6.1	Main results	122
7.6.2	Variational arguments	123
7.6.3	Proof of Theorem 7.8	131
7.6.4	Proofs of Theorems 7.6 and 7.7	131
7.7	Semiclassical solutions	133
8.	Solutions of a system of diffusion equations	139
8.1	Reviews	139
8.2	Main results	142
8.3	Linear preliminaries	143
8.4	Functional setting	146
8.5	Solutions to (FS)	151
8.6	Some extensions	154
8.6.1	0 is a boundary point of $\sigma(S)$	154
8.6.2	More general symmetries	155
8.6.3	More general nonlinearities	155
8.6.4	More general systems	156
	<i>Bibliography</i>	161
	<i>Index</i>	167
