Authors ..... **xi**

Preface ..... **xiii**

Who Should Read This Book xiii

What This Book Covers xiv

What This Book Does Not Cover xiv

How the Book Came To Be xiv

Acknowledgments xv

1 Introduction to Multimedia **1**

1.1 The Internet and Multimedia Communications 1

1.2 Continuous and Discrete Media 3

1.3 Digital Signals 3

1.3.1 Sampling 3

1.3.2 Quantization and Encoding 4

1.3.3 Bit Rate 5

1.4 Still Images 5

1.5 Text and Graphics 6
1.6 Moving Graphics and Images 7
1.7 Encoding and Decoding 7
1.8 Bandwidth vs. Compression 9
1.9 Project TeleTeaching 11
1.9.1 Background and Motivation 11
1.9.2 Teleteaching Scenarios 12
1.9.3 Multimedia Teaching Materials 15
1.9.4 Industrial Partners 16
1.9.5 Comparable Projects 16
1.10 References 16

2 Multimedia Networks: Requirements and Performance Issues 19

2.1 Distributed Multimedia Applications 19
2.2 Peer-to-Peer and Multipeer Communications 20
2.3 Network Performance Parameters for Multimedia 21
2.3.1 Throughput 21
2.3.2 Error Rate 22
2.3.3 Delay 22
2.3.4 Round-trip Delay 23
2.3.5 Delay Variation or Jitter 24
2.4 Characteristics of Multimedia Traffic Sources 24
2.4.1 Throughput Variation with Time 24
2.4.2 Time Dependency 25
2.4.3 Bidirectional Symmetry 25
2.5 Factors That Affect Network Performance 26
2.5.1 Throughput Performance Factors 26
2.5.2 Issues in Network Error Performance 28
2.5.3 Network Delay Performance Issues 29
2.6 Multimedia Traffic Requirements for Networks 29
2.6.1 Throughput Requirements 30

2.6.2 Reliability (Error Control) Requirements 30
2.6.3 Delay Requirements 31
2.7 Quality of Service 32
2.8 References 33

3 Compression Methods 35

3.1 Introduction to Compression Methods 35
3.2 Basic Coding Methods 39
3.2.1 Run-Length Coding 39
3.2.2 Huffman Coding 40
3.2.3 Arithmetic Coding 41
3.2.4 Discrete Cosine Transform 42
3.2.5 Differential Pulse Code Modulation 45
3.2.6 Motion-Compensated Prediction 46
3.3 Video Compression 47
3.3.1 Nonstandardized Techniques 47
3.3.2 JPEG 48
3.3.3 H.261 52
3.3.4 MPEG-1 Video 56
3.3.5 MPEG-2 Video 60
3.3.6 MPEG-4 Video 61
3.3.7 H.263 62
3.3.8 Wavelet Image Compression 62
3.3.9 Fractal Image Compression 65
3.4 Audio Compression 67
3.4.1 Variants of Pulse Code Modulation 68
3.4.2 MPEG-1 Audio 68
3.4.3 Perceptual Audio Coder 72
3.5 More Information about Compression Methods 72
3.6 References 73

4 Subnetwork Technology 79

4.1 Networking Requirements of Multimedia Applications 79

4.1.1 Throughput 79

4.1.2 End-to-End Delay 80

4.1.3 Multipoint Communication. 81

4.1.4 Reliability. 81

4.1.5 Channel Synchronization *82*

4.2 Networking Technologies 82

4.2.1 Relevant Parameters 82

4.2.2 Ethernet 83

4.2.3 100Base-T (Fast Ethernet) 83

4.2.4 Isochronous Ethernet 84

4.2.5 Token Ring 85

4.2.6 Demand Priority 86

4.2.7 FDDI 88

4.2.8 FDDI II 89

4.2.9 DQDB 90

4.2.10 X.25 Packet-Switching 92

4.2.11 Frame Relay 92

4.2.12 IP Packet-Switching Networks 94

4.2.13 ISDN 94

4.2.14 ATM 96

4.2.15 IP-Switching 103

4.2.16 Summary of Network Characteristics 105

4.3 Networking Infrastructure Evolution 107

4.3.1 Network Deployment Issues 107

4.3.2 WAN Evolution 108

4.3.3 LAN Topology Evolution 110

4.3.4 Integration of ATM into the LAN Infrastructure 113

4.3.5 Classical IP over ATM (RFC 1577) 113

4.3.6 IP Multicasting over ATM 115

4.3.7 LAN Emulation Services over ATM 118
4.3.8 Native Multimedia Communication over ATM 120
4.4 Summary 120
4.5 References 121

5 Network and Transport Layer Protocols for Multimedia 125

5.1 Principles and Algorithms of Traditional Protocols 125
5.1.1 Routing 126
5.1.2 Reliability 134
5.1.3 Multicast 135
5.2 Problems with Traditional Protocols 138
5.2.1 Traditional Protocols Cannot Guarantee Quality of Service 140
5.2.2 Traditional Protocols Do Not Support Multicast 143
5.3 A New Generation of Protocols for Multimedia 148
5.3.1 ST2, the Stream Protocol Version II 148
5.3.2 The Tenet Protocols 150
5.3.3 Multicast IP and the MBone 151
5.3.4 IP Version 6 153
5.3.5 RSVP, a Resource Reservation Protocol for the Internet ..155
5.3.6 RTP, a Real-Time Transport Protocol 158
5.4 Media Filtering, Media Scaling, and Adaptive Applications 159
5.4.1 Media Filtering 160
5.4.2 Media Scaling 161
5.4.3 Adaptive Applications 161
5.5 Summary 162
5.6 References 163

6 End-to-End Reliable Multicast 169

6.1 Defining End-to-End Reliability 169
6.2 A Taxonomy of Reliable Multicast Protocols 170
6.2.1 Sender-Initiated Protocols 171

6.2.2 Receiver-Initiated Protocols 173
6.2.3 Tree-Based Protocols 174
6.2.4 Ring-Based Protocols 176
6.3 Maximum Throughput of Reliable Protocols 177
6.4 Protocol Implementations 179
6.4.1 Scalable Reliable Multicast (SRM) 179
6.4.2 Tree-Based Protocols 181
6.5 Scaling and Efficiency Issues 183
6.5.1 Deallocating Memory 183
6.5.2 Common ACK Trees 186
6.5.3 Efficient Ack Tree Construction 187
6.5.4 Tree Maintenance 187
6.6 Summary 188
6.7 Acknowledgments 189
6.8 References 189

7 Multimedia Applications in Networks 193

7.1 Introduction 193
7.2 Application-Level Framing 194
7.3 Audio/Video Conferencing 196
7.3.1 Session Directories 196
7.3.2 Audio/Video Conferencing 197
7.3.3 Adaptive Applications 200
7.3.4 Receiver Heterogeneity 205
7.3.5 Real-Time Applications with Resource Reservations 208
7.4 Video Servers 211
7.4.1 Architecture of Video Server Systems 211
7.4.2 MBone VCR: A Video Server for the MBone 214
7.5 Applications Requiring Reliable Multicast 214
7.5.1 Whiteboard 214
7.5.2 Network Text Editor for Shared Text Editing 216
7.5.3 MultiTalk 216

7.5.4 Multicast File Transfer 217
7.6 Multimedia Applications in the World Wide Web 218
7.6.1 Multicast Web Page Sharing 218
7.6.2 Audio/Video Streams in the WWW 221
7.6.3 Conferencing Java Applets 223
7.7 Interactive Multiplayer Games 223
7.7.1 On-line Casino 224
7.7.2 MiMaze 225
7.8 Summary 225
7.9 References 226

Index 231
