Preface	ix
Foreword to the First Edition	ix
Foreword to the Second Edition	x
Translators' Notes	xi
Acknowledgments	xii
Abstract	xiii
1 An Overview of Thurston's Theorems on Surfaces	1
Valentin Poénaru	
1.1 Introduction	1
1.2 The Space of Simple Closed Curves	2
1.3 Measured Foliations	3
1.4 Teichmüller Space	5
1.5 Pseudo-Anosov Diffeomorphisms	6
1.6 The Case of the Torus	8
2 Some Reminders about the Theory of Surface Diffeomorphisms	14
Valentin Poénaru	
2.1 The Space of Homotopy Equivalences of a Surface	14
2.2 The Braid Groups	15
2.3 Diffeomorphisms of the Pair of Pants	19
3 Review of Hyperbolic Geometry in Dimension 2	25
Valentin Poénaru	
3.1 A Little Hyperbolic Geometry	25
3.2 The Teichmüller Space of the Pair of Pants	27
3.3 Generalities on the Geometric Intersection of Simple Closed Curves	35
3.4 Systems of Simple Closed Curves and Hyperbolic Isometries	42
4 The Space of Simple Closed Curves in a Surface	44
Valentin Poénaru	
4.1 The Weak Topology on the Space of Simple Closed Curves	44
4.2 The Space of Multicurves	46
4.3 An Explicit Parametrization of the Space of Multicurves	47

A	Pair of Pants Decompositions of a Surface	53
	Albert Fathi	
5	Measured Foliations	56
	Albert Fathi and François Laudenbach	
	5.1 Measured Foliations and the Euler–Poincaré Formula	56
	5.2 Poincaré Recurrence and the Stability Lemma	59
	5.3 Measured Foliations and Simple Closed Curves	62
	5.4 Curves as Measured Foliations	71
B	Spines of Surfaces	74
	Valentin Poénaru	
6	The Classification of Measured Foliations	77
	Albert Fathi	
	6.1 Foliations of the Annulus	78
	6.2 Foliations of the Pair of Pants	79
	6.3 The Pants Seam	84
	6.4 The Normal Form of a Foliation	87
	6.5 Classification of Measured Foliations	92
	6.6 Enlarged Curves as Functionals	97
	6.7 Minimality of the Action of the Mapping Class Group on \mathcal{PMF}	98
	6.8 Complementary Measured Foliations	100
C	Explicit Formulas for Measured Foliations	101
	Albert Fathi	
7	Teichmüller Space	107
	Adrien Douady; notes by François Laudenbach	
8	The Thurston Compactification of Teichmüller Space	118
	Albert Fathi and François Laudenbach	
	8.1 Preliminaries	118
	8.2 The Fundamental Lemma	121
	8.3 The Manifold $\overline{\mathcal{T}}$	125
D	Estimates of Hyperbolic Distances	128
	Albert Fathi	
	D.1 The Hyperbolic Distance from i to a Point z_0	128
	D.2 Relations between the Sides of a Right Hyperbolic Hexagon	129
	D.3 Bounding Distances in Pairs of Pants	131

9	The Classification of Surface Diffeomorphisms	135
	Valentin Poénaru	
9.1	Preliminaries	135
9.2	Rational Foliations (the Reducible Case)	136
9.3	Arational Measured Foliations	137
9.4	Arational Foliations with $\lambda = 1$ (the Finite Order Case)	140
9.5	Arational Foliations with $\lambda \neq 1$ (the Pseudo-Anosov Case)	141
9.6	Some Properties of Pseudo-Anosov Diffeomorphisms	150
10	Some Dynamics of Pseudo-Anosov Diffeomorphisms	154
	Albert Fathi and Michael Shub	
10.1	Topological Entropy	154
10.2	The Fundamental Group and Entropy	157
10.3	Subshifts of Finite Type	162
10.4	The Entropy of Pseudo-Anosov Diffeomorphisms	165
10.5	Constructing Markov Partitions for Pseudo-Anosov Diffeomorphisms	171
10.6	Pseudo-Anosov Diffeomorphisms are Bernoulli	173
11	Thurston's Theory for Surfaces with Boundary	177
	François Laudenbach	
11.1	The Spaces of Curves and Measured Foliations	177
11.2	Teichmüller Space and Its Compactification	179
11.3	A Sketch of the Classification of Diffeomorphisms	180
11.4	Thurston's Classification and Nielsen's Theorem	184
11.5	The Spectral Theorem	188
12	Uniqueness Theorems for Pseudo-Anosov Diffeomorphisms	191
	Albert Fathi and Valentin Poénaru	
12.1	Statement of Results	191
12.2	The Perron-Frobenius Theorem and Markov Partitions	192
12.3	Unique Ergodicity	194
12.4	The Action of Pseudo-Anosovs on \mathcal{PMF}	196
12.5	Uniqueness of Pseudo-Anosov Maps	204
13	Constructing Pseudo-Anosov Diffeomorphisms	208
	François Laudenbach	
13.1	Generalized Pseudo-Anosov Diffeomorphisms	208
13.2	A Construction by Ramified Covers	209
13.3	A Construction by Dehn Twists	210

14 Fibrations over S^1 with Pseudo-Anosov Monodromy	215
David Fried	
14.1 The Thurston Norm	216
14.2 The Cone C of Nonsingular Classes	218
14.3 Cross Sections to Flows	224
15 Presentation of the Mapping Class Group	231
François Laudenbach and Alexis Marin	
15.1 Preliminaries	231
15.2 A Method for Presenting the Mapping Class Group	232
15.3 The Cell Complex of Marked Functions	234
15.4 The Marking Complex	238
15.5 The Case of the Torus	241
Bibliography	243
Index	251
