

J.L. Ericksen

Introduction to the Thermodynamics of Solids

Revised Edition

With 25 Illustrations

Springer

Contents

Preface	vii
1 Generalities	1
1.1 Energy, Heat, and Power	1
1.2 Temperature and Entropy	3
1.3 Thermodynamic Equilibrium	6
2 Constitutive Theory of Heat Transfer for Bars and Plates	11
2.1 Thermodynamics of Rigid Bars	11
2.2 Constitutive Theory for Rigid Bars	17
2.3 Constitutive Theory for Thermoelastic Bars	21
2.4 Constitutive Theory for Shearing of Plates	29
2.5 Thermodynamic Experiments	31
2.6 Exercises	34
3 Equilibrium Theory of Bars	37
3.1 Equilibrium of Bars Subjected to Dead Loads	37
3.2 Equilibrium Theory of Bars in Hard Devices	50
3.3 Exercises	56
4 Equilibrium Theory of Plates	57
4.1 Martensitic Transformations	57
4.2 Bifurcation Diagrams	62

4.3	Exercises	65
5	Balloon Problems	67
5.1	Equilibrium of Spherical Balloons at Fixed Pressure . . .	67
5.2	Equilibrium of Balloons Containing a Fixed Mass of Gas .	72
5.3	Exercises	76
6	Biaxial Stretch of Rubber Sheets	79
6.1	The Idealized Problem	79
6.2	The Treloar Instability	83
6.3	Exercises	90
7	Moving Discontinuities	93
7.1	Shock Waves in Bars	93
7.2	Breaking Bars	99
7.3	A Peeling Problem	100
7.4	Another Peeling Problem	103
7.5	Exercises	106
8	Mixture Theory	109
8.1	General Remarks	109
8.2	Elementary Theory	110
8.3	A Solid in an Ideal Gas	118
8.4	Exercises	122
9	Equilibrium of Liquid Crystals and Rods	123
9.1	Liquid Crystal Energies	123
9.2	Orientation by Fields and Walls	128
9.3	Measurement of Moduli	130
9.4	Elastica Theory	137
9.5	Exercises	141
10	Reconsideration of Generalities	143
10.1	Systems, Energy, and Temperature	143
10.2	General Processes	147
10.3	Static and Reversible Processes	149
10.4	Cyclic Processes and Cycles	156
10.5	States	158
10.6	Laws of Classical Thermodynamics	167
	References	181
	Index	187
