# CONTENTS

Preface . . . . .	v
-------------------	---

## Chapter 1

OPTICAL-FIBER MATERIALS . . . . .	1
1.1 Materials for optical fibers . . . . .	1
1.1.1 Introduction . . . . .	1
1.1.2 Oxide glass . . . . .	4
1.1.3 Halide glass . . . . .	6
1.1.4 Chalcogenide glass . . . . .	6
1.1.5 Single crystals and polycrystals . . . . .	6
1.1.6 Plastics . . . . .	8
1.2 Optical transmission loss of fiber materials . . . . .	8
1.2.1 Introduction . . . . .	8
1.2.2 Phonon absorption . . . . .	11
1.2.3 Electron transition absorption . . . . .	15
1.2.4 Weak absorption tail . . . . .	16
1.2.5 Scattering loss . . . . .	18
References . . . . .	20

## Chapter 2

OPTICAL PROPERTIES OF PURE AND DOPED SILICA . . . . .	23
2.1 Transmission loss . . . . .	23
2.1.1 Introduction . . . . .	23
2.1.2 Phonon absorption and multiphonon absorption . . . . .	23
A) $\text{SiO}_2$ . . . . .	23
B) $\text{GeO}_2$ . . . . .	26
C) $\text{P}_2\text{O}_5$ . . . . .	26
D) $\text{B}_2\text{O}_3$ . . . . .	27
2.1.3 Ultraviolet absorption and the tail . . . . .	28
2.1.4 Impurity absorption . . . . .	31
A) Transition metal . . . . .	31
B) Hydroxyl ions . . . . .	32
2.1.5 Scattering loss . . . . .	33

2.1.6	Total loss of high silica fibers . . . . .	35
2.2	Refractive-index . . . . .	36
2.2.1	Refractive-index dispersion . . . . .	37
2.2.2	Material dispersion . . . . .	38
2.2.3	Profile dispersion . . . . .	41
2.2.4	Temperature dependence . . . . .	44
2.3	Linear thermal expansion coefficients . . . . .	46
	References . . . . .	49

### Chapter 3

	<b>FABRICATION PROCESS OF HIGH SILICA FIBERS . . . . .</b>	<b>51</b>
3.1	Introduction . . . . .	51
3.2	MCVD process . . . . .	54
3.2.1	Instruments for MCVD process . . . . .	56
3.2.2	Tube diameter control . . . . .	58
3.2.3	Prebake of silica tube . . . . .	58
3.2.4	Hydroxyl impurity reduction . . . . .	61
3.2.5	Optimum deposition temperature . . . . .	63
3.3	Outside Vapor Deposition process . . . . .	64
3.4	Fiber drawing . . . . .	66
3.4.1	Drawing apparatus . . . . .	67
3.4.2	Diameter control . . . . .	68
3.4.3	Strength . . . . .	69
A)	Surface treatment . . . . .	69
B)	Dust particles in the furnace . . . . .	70
C)	Humidity . . . . .	71
D)	Primary coating . . . . .	71
	References . . . . .	74

### Chapter 4

	<b>VAPOR-PHASE AXIAL DEPOSITION PROCESS . . . . .</b>	<b>77</b>
4.1	Introduction . . . . .	77
4.2	Preform fabrication apparatus . . . . .	78
4.2.1	Porous preform fabrication chamber . . . . .	80
A)	Torches . . . . .	80
B)	Reaction chamber . . . . .	81
4.2.2	Consolidation furnace . . . . .	82
4.2.3	Pulling mechanism . . . . .	83
4.2.4	Exhaust system . . . . .	85
4.3	Porous preform fabrication . . . . .	85
4.3.1	Synthesis and deposition of fine glass particles . . . . .	86
4.3.2	Preparation and size control of porous preforms . . . . .	88
4.3.3	Simultaneous cladding formation . . . . .	90

4.3.4	High-speed production of porous preforms . . . . .	94
4.4	Dehydration and consolidation . . . . .	94
4.4.1	Experimental results . . . . .	96
4.4.2	A model for final sintering stage . . . . .	97
4.4.3	Consolidation Condition . . . . .	101
A)	Gas permeability effect on pore behavior . . . . .	101
B)	Temperature increasing speed . . . . .	105
C)	Sintering in mixed gas atmosphere . . . . .	106
4.5	Dehydration . . . . .	107
4.5.1	Dehydration principle . . . . .	107
4.5.2	Optimum dehydration temperature . . . . .	109
4.5.3	Water vapor pressure . . . . .	110
4.5.4	Dehydration reagent pressure . . . . .	110
4.5.5	Dehydration time . . . . .	111
4.5.6	Kinds of dehydration reagent . . . . .	112
4.5.7	Cladding thickness . . . . .	114
4.6	Profile control . . . . .	115
4.6.1	Introduction . . . . .	115
4.6.2	Dopant concentration . . . . .	115
4.6.3	Profile formation mechanism . . . . .	122
A)	SiO <sub>2</sub> -TiO <sub>2</sub> system . . . . .	122
B)	SiO <sub>2</sub> -GeO <sub>2</sub> system . . . . .	122
C)	Flame temperature effect . . . . .	124
D)	Gas mixing effect . . . . .	125
4.6.4	Profile control techniques . . . . .	127
A)	Application of surface temperature effect . . . . .	127
B)	Application of gas mixing effect . . . . .	129
4.6.5	Fluorine doping . . . . .	131
	References . . . . .	132

## Chapter 5

### FABRICATION PROCESSES OF MULTI-COMPONENT GLASS FIBERS AND NON-SILICA FIBERS . . . . .

5.1	Multi-component glass fibers . . . . .	137
5.1.1	Fabrication process . . . . .	137
5.1.2	Purification of raw materials . . . . .	138
5.1.3	Bubble formation . . . . .	141
5.2	Fluoride glass fibers . . . . .	143
5.3	Chalcogenide glass fibers . . . . .	148
5.4	Crystalline fibers . . . . .	150
5.5	Plastic fibers . . . . .	151
	References . . . . .	153

## Chapter 6

## TRANSMISSION CHARACTERISTICS OF OPTICAL FIBERS

.....	155
6.1 Single mode fibers .....	155
6.1.1 Transmission loss .....	155
6.1.2 Transmission bandwidth .....	156
A) Characterization technique .....	156
B) Dispersion of single mode fibers .....	156
C) Dispersion-free single mode fibers in 1.5- $\mu$ m region .....	157
D) Doubly clad single-mode fibers .....	160
E) High bit rate transmission experiments .....	161
6.1.3 Bending loss .....	162
A) Dip effect .....	164
B) Bending radius and refractive-index difference .....	165
C) Theory .....	165
6.2 Graded index high-silica fiber .....	167
6.2.1 Transmission loss .....	167
6.2.2 Bandwidth .....	168
6.2.3 Refractive-index fluctuation .....	168
6.3 Al <sub>2</sub> O <sub>3</sub> -doped high-silica fibers .....	172
6.4 Loss increase by hydrogen permeation .....	174
6.5 Multi-component glass fibers .....	175
6.6 Non-silica fibers .....	177
6.6.1 Fluoride glass fibers .....	177
6.6.2 Chalcogenide glass fibers .....	178
6.6.3 Crystalline fibers .....	179
6.6.4 Plastic fibers .....	179
References .....	183
Index .....	185
