The Mechanism of the Thermoemitting Arc Cathode

by Werner Neumann

With 31 Figures and 6 Tables

Akademie-Verlag Berlin 1987

Contents

0.	List of Symbols	10
1.	Introduction	15
2.	Working Principle of the Self-Sustained Thermoemitting Arc Cathode	17
3.	Basic Processes and Local Power Balances in the Cathode Region	19
$\begin{array}{c} 3.1.\\ 3.1.1.\\ 3.1.2.\\ 3.1.3.\\ 3.1.4.\\ 3.1.5.\\ 3.2.\\ 3.2.1.\\ 3.2.2.\\ 3.3.\\ 3.3.1.\\ 3.3.2.\\ 3.3.3.\\ 3.3.3.\\ 3.3.3.\\ \end{array}$	Electron Emission	 19 19 22 23 25 27 27 28 33 34 34
3.4. 4.	Local Power Balance at the Cathode Surface	34
4.	TF-Emission, and General Solution Scheme	38
4.1. 4.2.	The Complex System of Balance Equations	$\frac{38}{42}$
5.	Special Model Solutions for the Cathode Balance Equations	44
5.1. 5.1.1.	Solutions of the Balance Equations on the Basis of Simplified Cathode Models Oversimplified Model of the Cathode Spot Fixed on a Semiinfinite Cathode Body.	44
5.1.1.1.	Presentation of the Incomplete System of Balance Equations	44
5.1.1.2.	Balance Equations	45
5.1.1.3. 5.1.2.	Cathode Spot Edge for Completing the System of Balance Equations Discussion of Results Obtained with the Oversimplified Cathode Spot Model Extension of the Oversimplified Cathode Spot Model to a Rod-Shaped Cathode Body	49 50
	of Finite Length. Indication for the Existence of a Spotless Cathode Mode	53

Contents

5.1.3.	Extension of the Oversimplified Cathode Spot Model to a Radiation-Cooled Long Cathode Cylinder	56
5.1.4.	Extension of the Oversimplified Cathode Spot Model to a Radiation-Cooled Spherical	50 57
5.1.5.	Cathode Body	58
	Simple Model of the Spotless Cathode Model.	98
5.2.	Special Solutions of the Balance Equations for a Thermoemitting Arc Cathode on the Basis of Refined Cathode Models	59
5.2.1.	The Case of Arbitrary Cathode Geometry	60
5.2.2.	The Case of a Long Thin Cathode Cylinder, and the Case of the Thin-Walled Hollow	00
0.2.2.	Cathode Cylinder	61
5.3.	Calculation of Cathode Spot Data on the Basis of Semiempirical Cathode Models .	62
5.4.	Cathode Behaviour in the Case of Alternating Current Arcs	63
J. 1 .	Cathode Denaviour in the Case of Alternating Current Alts	05
6.	Departures from Idealized Thermocathode Behaviour	67
6.1.	Nonuniform Distribution of Electron Emission Properties on the Cathode Surface .	67
6.2.	Appearance of Multiple Cathode Spots	68
6.3.	Cathode Erosion	68
6.3.1.	Cathode Consumption Due to Evaporation	68
6.3.2.	Thermal Etching as Result of Current Modulation and Related Phenomena	73
6.3.3.	Exhaustion of Emitter Substance with Subsequent Overheating	75
6.3.4.	Chemical Transport of Cathode Substance	75
6.4.	Influence of the Discharge Medium on the Work Function	77
6.4.1.	Modification of the Work Function Due to Surface Adsorption	77
6.4.2.	Modification of the Work Function Due to Penetration of the Discharge Medium into	
0.4.2.	the Cathode Body	79
619	Lowering of the Work Function Due to Dielectric Interaction with the Discharge	19
6.4.3.		00
